- Students will gain a knowledge of the development of Mormonism as a distinct religious and cultural force within American society as well as its impact in world-wide contexts. The emergence of Mormonism as a 'culture' and the evolution of its assumptions and unique cultural characteristics will also be emphasized. Students will gain practice in applying current anthropological theories to a culture familiar to the majority of participants, but perhaps never thought about by students through the disciplinary assumptions of anthropology.

ANTHR 350 : Archaeological Cultures of North America. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Cultural developments of North American Indians (Canada, U.S., and northern Mexico) before Columbus.

Course Outcomes

- Students will gain an introductory level comprehension of the diverse cultural developments of North American indigenous peoples as well as selected examples from Canada and Northern Mexico through the study of archaeological evidence and material culture.
- Students will gain a more in-depth comprehension of the diversity and complexity of data sets regarding archaeological evidence via material cultural remains by hands-on interactions with the collections of the Museum of Peoples and Cultures at BYU.
- Through course assignments, students will increase their skills in critical thinking, research, analysis, and writing. Emphasis will be placed on writing in the discipline.

ECON 274 : American Economic History. (3:3:0)

PREREQUISITE: ECON 110

DESCRIPTION: Impact on households, firms, and government of America's transformation from a rural, agricultural colony to a major industrial nation.

Course Outcomes

No outcomes are available at this time.

SOC 327 : Sociology of the LDS Church and Its People. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: The LDS Church from a social science perspective, including the Church as a new religious movement; LDS culture; the institutionalization process.

Course Outcomes

- Students become “conversant with the substantive areas of sociology and the variety of theories and research methods associated with these substantive areas,” as they apply to the sociology of religion in general and the sociology of Latter-day Saint life in particular. They learn several of the “major controversies and debates, new developments, emerging issues, and current trends” as they impact the study and interpretation of Latter-day Saint life in the contemporary academic and intellectual world. Students also are helped “to critically assess the strengths and weaknesses of current sociological theories and research relating to substantive areas,” in this case Latter-day Saint life both historically and in the 20th and 21st centuries.
- Students have direct experience in comparative analysis both at the individual and group level, in interpersonal contexts as well as in vicarious and analytical experience, whereby they learn “the limitations of extrapolating from their own experience” and confront “how the life experience of others may differ from their own,” both within social categories (e.g., comparisons with the life experience of other Latter-day Saints) and across social boundaries (e.g., comparisons with members of other faiths or national populations). Students experience “how race, class, and/or gender intersect with other social categories,” in this instance, religious membership or national identities, “to create a variety of life experiences.” They also learn to “articulate the sources of social conflict and describe the relations of power in modern society” as they consider both the history of the often-hated minority that was the Latter-day Saints and the contemporary setting and participation of Latter-day Saint people in modern and postmodern society.
- Students consider the underlying assumptions and “basic ideas and arguments forming sociological inquiry” as they apply to the sociology of religious life, especially the experience of Mormon people and Mormondom generally. Conflict theory, functionalism, social psychological perspectives, demographic perspectives are all brought into play as they affect the study of Latter-day Saint culture. Special attention is paid to the differences between postmodern and modern theoretical perspectives as they impact definitions of “truth” and “reality” and as they apply to theorizing about and doing research on people’s ideas of religion and transcendence.
- Diversity of research methodologies are illustrated; the “fit” of various approaches to the study of religious life are evaluated. This is not a methods course, but as issues of research methodology affect the confidence one can have in the findings of researchers who study Mormonism, issues of methodology are discussed and we learn to distinguish good from poor research.
- Because our focus is social science literature on Mormonism across more than a century, the emphasis on “current” is limited, but because many of our readings and several of the “classics” students review are current, we contribute in part to awareness of the current state of social

science analysis of religion, and Mormonism in particular. Students demonstrate their knowledge of substantive areas as applicable to research on LDS populations in their critiques of "classic" sociological studies of Mormonism, ideally demonstrating both the strong points and weaknesses of high quality and/or high profile studies of Mormon thought, life, and people.
- Both the advantages and the disadvantages of sociological perspectives (the plural here is important; there are many social science perspectives, and to speak of the sociological perspective is a distortion) with respect to interpreting daily life and religious life are emphasized throughout the course. Dilemmas and challenges of trying to live an integrated spiritual and successful temporal existence within contemporary societies are stressed throughout the course. Throughout, we stress the importance to the religious life of systematic, honest, and sophisticated awareness of intellectual fads and foibles, changing trends and worldviews, varying standards and assumptions, patterns of globalization and secularization. More than many sociological courses, this one is devoted to the overall aim of BYU education to integrate spiritual and secular life goals and interest, to combine professional and career interests with a more specialized awareness of how religious organizations, beliefs, and institutions fit within and change along with the wider society, and the challenges associated with the sometime conflict of individual, family, organizational and societal interests.

Arts and Literature

ENGL 364 : Literature and Cultures of the American West. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: ENGL 251 & ENGL 293 & ENGL 295; or ENGL 251 & ENGL 294 & ENGL 295

DESCRIPTION: Literature and cultural representations of the American West and the frontier.

Course Outcomes
- Read critically and analyze in the context of appropriate literary and cultural theories major and selected minor texts and associated with the American West.
- Form a research strategy, independently locate relevant digital and print sources, and draw upon these to develop an effective written argument pertinent to the literature and cultures of the American West.
- Produce polished, competent, formal writing, free from distracting errors in mechanics, syntax, and formatting, and in accordance with MLA formatting and citation guidelines.

ENGL 368 : Literature of the Latter-day Saints. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: ENGL 251 & ENGL 295

DESCRIPTION: Fiction, poetry, drama, folklore, personal essay, and other literature emerging from the LDS experience and expressing various perspectives on it.

Course Outcomes
- Form a research strategy, independently locate relevant digital and print sources, and draw upon these to develop an effective written argument pertinent to the material studied in the class.
- Identify, locate, read critically, and analyze major and selected minor texts and associated with the Latter-Day Saints.
- Produce polished, competent, formal writing, free from distracting errors in mechanics, syntax, and formatting, and in accordance with MLA formatting and citation guidelines.

ENGL 392 : American Folklore. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ENGL 251

DESCRIPTION: American folk art and literature and the historical and cultural circumstances from which they developed.

Course Outcomes
- Document folklore using established formats and understand some methods of recording and archiving local traditions in order to "analyze rigorously" American texts and artifacts in context and in terms of how "the American experience has been, and continues to be, constructed and transmitted."
- Identify and remember 3 categories of folklore; 4 types of folk narrative; 8 folk groups.
- Relate worldview with the performance of traditions, comparing similarities and differences of groups with differing worldviews and obtaining a wider view of American history and diversity.
- Reason intelligently in oral and written discourse while allowing that traditions are meaningful to participants in places and times different from your present circumstances.
- Work independently to connect folklore studies with other course work and life experiences and goals.
- Get excited about personal, group, and aesthetic dynamics in the performance of traditions and "question ethically" the choices and forces that help perpetuate or extinguish traditional practices, both locally and globally.

SPAN 365 : Mexican-American Culture. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Span 321 or concurrent enrollment.

DESCRIPTION: Contemporary culture (education, popular and fine arts, worldview, attitudes, etc.) of the Mexican-American in the U.S.

events, placing them in historical context.
- Students should be able to recognize, compare, and evaluate the influence of their own cultural background on their attitudes, beliefs, and worldview, in relation to the Mexican- American world.

3. Complete additional elective courses to make a total of 18 hours. Electives may be chosen from the courses listed above that have not been used, from the additional courses listed below, or from topical courses on Western themes offered through academic departments or the Honors Program.

AM ST 390R : Topics in American Studies. (3:3:0)

DESCRIPTION: Multidisciplinary study of a carefully defined problem in American culture. Topics vary.

Course Outcomes
- Students will be able to employ disciplinary and interdisciplinary perspectives to address a key problem or question in American culture.
- Students will, in a variety of written assignments, rigorously analyze cultural and textual research sources.
- Students will be able to communicate persuasively in oral and written forms following the conventions of the field.

(western topics only)

AM ST 392R : American Studies Lecture Series: Presentations on American Studies/Western American Studies. (1:1:0)

WHEN TAUGHT: Fall

DESCRIPTION: Introduce research in American Studies and Western American Studies. Speakers from BYU and other institutions share their research. Students engage with lecturers by developing questions, then evaluate and write about ideas.

Course Outcomes
- Students will be introduced to the latest research in American Studies and Western American Studies by attending a weekly lecture series.
- Students will be able engage with the lecturers by asking questions and responding to teach lecture.
- Students will be able to evaluate and write clearly about the ideas presented in the lectures.

AM ST 399R : Academic Internship. (.5-6:0:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Program coordinator's consent.

DESCRIPTION: Examining the American experience from a variety of standpoints. Honing skills in writing; literary criticism; historical research; and social, political, and economic analysis.

Course Outcomes
- Using available resources, students will be able to work independently to arrange and complete an internship that will help them explore post-graduation career possibilities.
- Students will be able to analyze and act in accord with the conventions, texts, and/or artifacts of the field in which they arrange their internship; they will develop a fuller understanding of regional, national, and/or international modes of American experience.
- Students will improve their oral and written skills according to the best practices of the internship situation in which they are engaged, as evaluated by internship supervisors and coordinators.

(up to 6 hours with director's approval)

ANTHR 317 : Native Peoples of North America. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

DESCRIPTION: Indian groups at the time of the European arrival; social organization, beliefs, values, economy, and adaptation to environment.

Course Outcomes
- Through course assignments, students will gain an introductory knowledge of the major Native American cultures at the time of European contact including but not limited to social organization, belief systems, values, economies, and adaptations to environments.
- Through course assignments and hands-on access to the collections of the BYU Museum of Peoples and Cultures, students will gain a greater depth of knowledge concerning the diverse range of material culture represented by the indigenous peoples of North America.
- Through course assignments, students will increase their skill sets in critical thinking, research, analysis, and writing skills in the disciplines of anthropology and archaeology.

ANTHR 530 : Great Basin Archaeology. (3:3:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: Anthr 350 or equivalent.

DESCRIPTION: Overview of ethnography, history of research, and prehistory of the Great Basin culture area. Current issues in archaeological research emphasized.

Course Outcomes
- Students will gain archaeological and cultural knowledge of the major native peoples of the Great Basin Region from pre-history through European contact through a study of their archaeologial remains and ethnographic studies.
- Students will have hands-on experiences with the collections of the Museum of Peoples and Cultures that are representative of the cultures of the Great Basin Region.

ANTHR 535 : Southwest Seminar. (3:3:0)

WHEN TAUGHT: Winter Odd Yrs.

Admission to Degree Program

All degree programs in the Department of Asian and Near Eastern Languages are open enrollment. Some special limitations apply for teaching minors.

The Discipline

The many countries of Asia and the Near East are among the oldest civilizations in the world. The study of the languages and cultures of these nations gives students access to some of the richest and most varied traditions of thought, belief, and behavior to be found. A large percentage of the vast, essentially non-Christian segment of the world's population resides in these two zones: Asia—with its diverse heritage of belief in Hinduism, Buddhism, Taoism, Confucianism, and other systems of thought—continues to retain its "exotic" image for most Westerners, even though many nations in the region are at the forefront of contemporary politics and economics. The Near East, birthplace of Christianity, Judaism, and Islam, remains a little-understood, often stereotyped area of considerable economic, strategic, and religious importance today.

The languages of these regions are themselves generally difficult, with complex writing systems that require diligent study. But exposure to these languages and the cultures they express will enable students to look at the world from new perspectives and deepen their understanding of peoples whose history and practices are widely divergent from their own.

Courses in the department equip students with verbal and written facility in the languages of their chosen area, whereas linguistics courses offer an understanding of how the languages are structured and acquired. A study of the literature reveals old and sophisticated traditions no less important than that of English or any other major language.

Majors are available in Chinese, Japanese, and Korean, and a second major in Arabic. Students can obtain a minor in Arabic, Biblical Hebrew, and Modern Hebrew. Each discipline is briefly described below.

Arabic (second major program)

Arabic study at BYU stresses facility in speaking a colloquial dialect and fluency in reading the press. The program is designed to supplement the Middle East Studies/Arabic major which prepares students for government-, agency-, and NGO-related work. The second major program, which is conceived as a supplement to the Middle East Studies/Arabic major, aims to push students' reading and speaking ability in the direction of the superior level.

Chinese

The study of Chinese accesses the literature, thought, culture, and society of the world's largest population with the longest cultural continuum; moreover, since the civilizations of Japan, Korea, and Vietnam are founded on traditional Chinese Confucianism, a major in Chinese opens up much of the wider world of modern Asia. You will communicate in spoken and written Mandarin, gain skills in analyzing and appreciating both traditional and modern literature, acquire effective research strategies, and learn to write clearly and persuasively. All the personal enrichment and interpersonal understanding that results from a liberal arts education in the humanities is offered through the study of Chinese.

Hebrew

The BYU Hebrew program offers courses and minor degrees in both Biblical Hebrew and Modern Hebrew. Biblical Hebrew students develop appreciation for the Hebrew Bible and competence to read prose and poetry. The program is designed to provide students with habits of study so that they may enjoy a life-long exploration of the Hebrew Bible. Students of Modern Hebrew gain access to the spoken language of the State of Israel and, through it, to Jews throughout the world. The Modern Hebrew program emphasizes the ability to speak and understand Modern Hebrew, to analyze Israeli literature and media, and to appreciate the cultural dynamics of the language.

Japanese

The study of Japanese at the university level will provide students an opportunity to develop high level communication skills to acquire a greater understanding of Japan and its people. Additionally, students will be introduced to the rich cultural heritage of Japan in literature, thought, painting, music, and the other arts. The study of Japanese language and literature will introduce students to many of the major aspects of that heritage, while providing the kind of training in language and cultural skills that will prepare students to undertake careers in a wide variety of fields.

Korean

Korean is a difficult language, and at BYU we emphasize reading and writing the language as well as speaking and listening. Basic course work emphasizes linguistic skill and the language's literary value and tradition.

Career Opportunities

Students who major or minor in the languages and cultures of Asia and the Near East will find that, as will any other humanities-centered course of study, they have been well provided with tools to communicate both in the target language and in English and have broadened and deepened their knowledge of the region of their choice. Career options are many and varied for such students, but those who do not plan to continue on in the academic study of the language are strongly urged to consider a second major or a strong minor in a practical field that can be combined with their language skills. In the competitive world of today, language ability alone no longer provides the competitive advantage it once offered on the job market. Students are urged to consult the College of Humanities Advisement Center, Career Placement Services, and their academic advisors for the best ways to make use of their language as they begin to seek employment.

Arabic

Graduates of our program find jobs in government agencies (the State Department, intelligence, the military), NGOs, and in international business. Many students use their Middle East Studies/Arabic major, or Arabic minor, as preparation for applying to MBA programs, law school, and medical or dental school.

Chinese

Chinese majors have all of the advantages of the liberal arts graduate (who claims effective communication and interpersonal skills) with the added edge of knowing the language and culture behind a leading world economy. Therefore, graduates enter the work force in a wide variety of occupations, such as journalism, insurance, business, travel, investment, and government service. They not only are marketable as trained linguists, translators, and cultural advisors, but are vigorously recruited as personnel managers and business representatives by companies with overseas interests. Graduates are also highly competitive in applying to professional schools for medicine, dentistry, law, and business.

Hebrew

Many students who minor in Biblical Hebrew major in Ancient Near Eastern Studies; some students continue on to earn Masters and Ph.D degrees. Eventually they are prepared to enter the academic field in a university setting, in seminary and institute programs of the Church Educational System, as independent researchers, or in related fields. Students who minor in Modern Hebrew will find the degree to be an asset if seeking jobs in government agencies (intelligence, State Department, military), international business, or the academic field.

Japanese

In recent years, graduates from the Japanese major at BYU have gone on to law, engineering, computer, or MBA programs, while others have continued on to medical school. A few have pursued graduate work in a variety of academic fields at some of the most prestigious universities in the country. Others have gone directly to work in government service, in the military, and in American or Japanese business firms where their language ability and cultural background are in high demand. Some also pursue careers in translation or language teaching.

Korean

Most of the jobs available for students with a Korean major are in government (NSA, CIA, FBI, etc.), but Korean majors also have all the advantages of a liberal arts degree. Many of our graduates go on to professional schools, law, business, or medicine. Korean is an excellent complement, either as a major or minor, to studies in prelaw, political science, accounting, English, international relations, and many other majors available on campus. Korean is an important language in the world of diplomacy and defense, as well as the world of international business. (Korea is the eighth largest trading partner of the U.S.) Our graduates have been hired by the U.S. government and by U.S., international, and Korean businesses. They work in technical areas as well, involving everything from computers to broadcasting to medicine.

General Information

The Department of Asian and Near Eastern Languages strongly recommends that StDev 317, a 1-credit-hour course, be taken at the end of the sophomore year or the beginning of the junior year. Because liberal arts degrees provide preparation in a variety of useful fields rather than a single career track, this course is recommended to help liberal arts students focus on specific educational and occupational goals and to identify the career options or educational opportunities available to them. The course will introduce them to the resources needed for accessing information about graduate schools, internships, careers, and career development. Students will learn basic employment strategies, including the steps necessary for obtaining employment related to their own specialty.

Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

This Language Certificate program is administered by the Center for Language Studies (3086 JFSB), http://languagecertificate.byu.edu.

Any matriculated (degree-seeking) BYU student who meets the proficiency and course requirements may earn the Chinese Language Certificate. The proficiency requirement is met through the nationally recognized ACTFL Oral and Writing Proficiency Exams. Qualifying students will be awarded a certificate on one of three levels based on the following:

1. Advanced Certificate: An ACTFL "Advanced" rating on at least one of the two proficiency exams and 9 hours of coursework with a minimum of a B- grade in each of the three courses.
2. Mastery Certificate: An ACTFL "Advanced High" rating on at least one of the two proficiency exams and 9 hours of coursework with a minimum of a B- grade in each of the three courses.
3. Professional Certificate: An ACTFL "Superior" rating on at least one of the two proficiency exams and 9 hours of coursework with a minimum of a B- grade in each of the three courses.

Required Courses:

Note: Students who have completed all of the coursework required for a language major or a language minor will also have satisfied the coursework requirement for the language certificate.

Admission to Program

The Digital Humanities and Technology minor degree program is open enrollment. All courses are open to all students who have met the prerequisite requirements.

The Discipline

The Digital Humanities extends the traditional Humanities in two ways. First, it employs traditional Humanities methods to examine and present new media—from movies and television to text messages and twitter feeds—alongside traditional Humanities content. Second, it uses new, technology-based approaches to re-examine and re-present traditional Humanities content.

At Brigham Young University, the Digital Humanities field is matched with application-based technology skills training. Along with the ability to use current technology, DigHT minors develop the ability to think soundly about using current technology. The program includes a capstone experience of either a mentored research and development project or a technology-based internship.

Career Opportunities

The Digital Humanities minor provides students of all disciplines with the narrative to describe how their university education is immediately applicable to the needs of employers. Additionally, the Digital Humanities is a current area of growth in academia, which increases demand for graduate students with technology skills.

Program Requirements

1. Complete the following:

DIGHT 215 : Introduction to the Digital Humanities. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Introduction to the premises and practices of the Digital Humanities. Exploration of current technology used in Digital Humanities research.

Course Outcomes

- Students will understand Unsworth's scholarly primitives and give examples of these primitives in Humanities scholarship.
- Students will be able to evaluate the utility of new technology for use in the Humanities.
- Students will be able to propose new uses for technology based on unmet needs in the Humanities.

2. Complete 12 credit hours from the following:

DIGHT 210 : Humanities Technology: Tools & Skills. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Introduction to the skills required to create teaching and research applications in the Humanities; fundamental principles and skills of programming; principles of interface and human/computer interaction; critical problem solving.

Course Outcomes

- Students will be able to model the flow and structure of information between users and application.
- Students will be able to reason logically and think critically to solve basic programming problems.
- Students will understand fundamental programming concepts: sequence, conditions, loops, variables, etc.
- Students will be able to convert abstract design requirements into machine-executable code.

DIGHT 230 : Introduction to Print Publishing. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Introduction to layout and typesetting and their place in the publications process; includes graphic design theory, audience analysis, and basic skills with professional desktop publishing application.

Course Outcomes

- Students will recognize the differences in purpose, audience, and style between various print publications.
- Students will situate typesetting and printing within the scope of the publishing process as a whole.
- Students will master the basic functions of Adobe InDesign for the purpose of typesetting various publications.
- Students will use a set of basic design principles (proximity, alignment, repetition, contrast) to improve the quality of their publications in InDesign.
- Students will be familiar with Adobe Photoshop and some of its uses in print publishing.
- Students will work effectively in groups to produce high quality printed material.

DIGHT 250 : Web Publishing. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Overview and introduction to web programming as a form of expression. Includes HTML, CSS, and some JavaScript.

Course Outcomes

- Students will evaluate new web technologies in light of the general history of the web.
- Students will be able to draft, design, and code static web content, and then post that content to a publicly-accessible web server.
- Students will have a mastery of HTML/CSS syntax, common HTML elements/attributes/properties, and basic skill with JavaScript.

DIGHT 260 : (DigHT-LingC) Programming for Text Processing and Analysis. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: LingC 200 or C S 100 or equivalent experience.

DESCRIPTION: Intermediate techniques with programming languages and toolkits suited for use with text analysis. Introduction to preparation and analysis of electronic texts.

Course Outcomes

There are no course outcomes available

DIGHT 310 : Programming in the Humanities. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: DigHT 210 or instructor approval.

DESCRIPTION: Intermediate topics in programming and creating teaching and research applications in the Humanities, including digital media integration, networked and mobile applications.

Course Outcomes

- Students will be able to reason logically and think critically to collaboratively solve significant programming problems.
- Students will understand advanced programming concepts: object orientation, data-driven applications, encapsulation, etc.
- Students will know how to integrate databases, web services, and basic server side scripting.
- Students will be able to convert abstract design requirements into machine-executable code.

DIGHT 315 : Research in the Digital Humanities. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: DIGHT 215

RECOMMENDED: DigHT 260.

DESCRIPTION: Applications of computer technology to research in the Digital Humanities across language and literature, e.g. text processing, data mining, information storage and retrieval, etc.

Course Outcomes

There are no course outcomes available

DIGHT 330 : Print Publishing 2. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: DIGHT 230

DESCRIPTION: Advanced application of digital layout and typesetting. Includes audience analysis, color theory, and photo preparation.

Course Outcomes

There are no course outcomes available

DIGHT 350 : Web Information Technologies. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: DigHT 250 or instructor approval.

DESCRIPTION: Using advanced web applications and services to create dynamic, database-driven Web sites. Integrating database methods with web publishing approaches and principles. Techniques for Web-based Digital Humanities applications such as crowd-sourced markup, automatic data visualizations, etc.

Course Outcomes

- Students will be able to organize information in various electronic schemas.
- Students will be able to extract information across a variety of electronic relationships.
- Students will be able to routinize the insertion, extraction, manipulation, and reporting of information.

DIGHT 390R : Tools Development Seminar. (1-3:Arr:Arr)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: DIGHT 250; or DIGHT 260; or DIGHT 350

DESCRIPTION: Individual or group development of new technological tools with use in the Digital Humanities.

Course Outcomes

There are no course outcomes available

DIGHT 395R : Digital Humanities Research Seminar. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: DIGHT 215

RECOMMENDED: DigHT 315.

DESCRIPTION: Individual or group research of original problems in Digital Humanities research.

Course Outcomes

No outcomes are available at this time.

Up to 6 credits of approved 300-level or higher courses with a technology focus offered by other departments across

campus.

3. Complete 3 credit hours of capstone courses:

DIGHT 495R : Digital Humanities Project. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Any DigHT 300-level course or instructor approval.

DESCRIPTION: Original research project on open questions within the Digital Humanities field. Content and/or technology advisor is required.

Course Outcomes

- Students will be able to draft written proposals for products/techniques they hope to develop.
- Students will be able to negotiate and meet the demands of a sponsor/client to develop technology solutions.
- Students will be able to apply their technology kills to solve a real problem they or someone else has.

DIGHT 496R : Technology Internship. (1-3:0:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Any DigHT 300-level course or instructor approval.

DESCRIPTION: Sponsored development of technology tools for application within the Digital Humanities (e.g. print or electronic publishing production, courseware/software development, museum/collection/textbase management, language/linguistic tools, etc.). Approval by project sponsor, DigHT Coordinator, and BYU Internship Office are required.

Course Outcomes

- Students will be able to complete tasks related to DHT skills in a professional environment.
- Students will be able to apply at least one DHT-related technology at a professional level.
- Student will be able to demonstrate professional traits such as promptness, positive demeanor, well-spokenness, etc.

A project/internship/capstone course in the student's major involving substantial computer work may also be used. See the DigHT coordinator for details.

Admission to Degree Program

All degree programs in the Department of English are open enrollment. However, special enrollment limitations apply for English teaching majors.

The Discipline

The English major provides a detailed knowledge of the English language and of literature written in English. English majors approach language and literature as a source of knowledge and aesthetic pleasure, a mode of encountering and evaluating diverse minds and attitudes, a vehicle for art and action, a means of historical understanding, and a source of spiritual insight. English majors use writing as their primary means (1) of knowing, understanding, and evaluating their experience and their reading and (2) of sharing their insight with others. In keeping with the long-standing ideals of a liberal arts education, the English Department aims to cultivate in its students those foundational skills in writing, awareness, and judgment upon which lives of wisdom, service, and an ever-increasing love for learning might be built.

Career Opportunities

With a firm grounding in the liberal arts, English majors are prepared for any career that requires perceptive reading, orderly and clear thinking, intellectual maturity, and effective writing. Many career opportunities for English majors exist in teaching, professional writing and editing, law, business, communications, or government service. English majors can certify to teach secondary-school English, or they can prepare for graduate study in English and college teaching. When combined with prerequisite courses in other departments, the English major provides excellent preparation for graduate work in law, business, library science, medicine, humanities, or religion. By selecting areas of concentration, some English majors prepare for careers in technical and professional communication, editing, creative writing, and related fields. By supplementing their English major with computer classes, some find work in information technology. The skills and knowledge acquired by an English major also provide good preparation for government service, especially when combined with the study of foreign languages, economics, political science, and history.

Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- Earn a minimum of 120 credit hours
- Have a cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

General Information

The Department of English strongly recommends that StDev 317, a 1-credit-hour course, be taken at the end of the sophomore year or the beginning of the junior year. Because liberal arts degrees provide preparation in a variety of useful fields rather than a single career track, this course is recommended to help liberal arts students focus on specific educational and occupational goals and to identify the career options or educational opportunities available to them. The course will introduce them to the resources needed for accessing information about graduate schools, internships, careers, and career development. Students will learn basic employment strategies, including the steps necessary for obtaining employment related to their own specialty.

Program Requirements | View MAP | View Program Outcomes

1. Students must complete the GE Foreign Language option even if the Advanced Mathematics option has already been completed.
2. The English Department requires a minimum of 21 hours of English major course work to be taken in residency at BYU for this degree program. These hours may also go toward BYU's 30-hour residency requirement for graduation.
3. Engl 195 is recommended.
4. Because upper-division English courses require substantial writing, students should complete their Engl 295 before they begin their first upper-division courses, preferably in the second semester of their sophomore year.
5. No more than three hours of any one R course may apply toward the hours required for the major.
6. Complete the following core requirements:
   - Students are strongly encouraged to take a freshman college-level writing course, regardless of their AP test scores (Wrtg 150 or Phil 150).
   - Fundamentals of language and literature: complete the following:

ENGL 251 : Fundamentals of Literary Interpretation and Criticism. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Introduction to concepts and practice of literary analysis; critical theories; and elements of fiction, poetry, and drama.

NOTE: Engl 251 fulfills the GE Letters requirement only for English majors and minors. Other sutdnts will not receive GE Letters credit for this course.

Course Outcomes
- Students will learn foundational approaches to reading literary, critical, and theoretical texts.
- Students will identify and classify fundamental issues and questions related to literary analysis.
- Students will produce readings of literature that employ this lexicon, demonstrate these reading approaches, and engage these fundamental issues and questions.
- Students will demonstrate mastery of a basic literary-critical lexicon.

Note: Students must complete Engl 251 before taking any 300-level courses.

   - British and American literary history:

Either

ENGL 291 : British Literary History 1. (3:3:0)

OFFERED: Independent Study also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: ENGL 251; or concurrent enrollment.

ENGL 294 : Transatlantic Literary History. (6:6:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: ENGL 251; or concurrent enrollment.
DESCRIPTION: This course explores British and American literary history from the eighteenth through the twenty-first centuries by studying key figures, movements, genres, events, themes, and ideas through the lens of transatlantic literary exchange.

Course Outcomes
- Identify and discuss representative authors, works, and movements in the transatlantic literary tradition.
- Through writing, exams, and other activities, demonstrate an understanding of the historical development and cultural context of the transatlantic literary tradition.

Note: Students must complete the literary history course in a period before taking any 300-level courses in that period.

- Complete the following core course:
  ENGL 295 : Writing Literary Criticism. (3:3:0)
  WHEN TAUGHT: Fall; Winter; Spring; Summer

This is a limited-enrollment program requiring departmental admissions approval. Please see item 1 below for information regarding admission to this program.

This major is designed to prepare students to teach in public schools. In order to graduate with this major, students are required to complete Utah State Office of Education licensing requirements. To view these requirements go to http://education.byu.edu/ess/licensing.html or contact Education Student Services, 120 MCKB, (801) 422-3426.

Program Requirements | View MAP | View Program Outcomes

1. This is a closed major requiring application to the program. Application forms are available in the Humanities Advisement Center (1175 JFSB) and the English Education Office (4168 JFSB). Students cannot apply until they have completed at least 9 hours of English major core courses.
2. Students must complete the GE Foreign Language option* even if the Advanced Mathematics option has already been completed.
3. The English Department requires a minimum of 24 hours of English major course work to be taken in residency at BYU for this degree program. These hours may also go toward BYU's 30-hour residency requirement for graduation.
4. Grades below C- in professional education courses or content courses will not be accepted in the teaching major or teaching minor. Teacher candidates must have a cumulative 2.85 GPA in teaching major and teaching minor courses to qualify for student teaching.
5. Engl 195 is recommended.
6. Because upper-division English courses require substantial writing, students should complete their Engl 295 before they begin their first upper-division courses, preferably in the second semester of their sophomore year.
7. A teaching minor is not required for licensure. However, it is strongly recommended.
8. Engl 276R is prerequisite to Engl 329, 377, 378, 379, and 423. All are prerequisite to Engl 476R.
9. Complete the following core requirements:
   - Because English is a writing-intensive major, students are strongly encouraged to take a first-year freshman college-level writing course regardless of their AP test scores (Wrtg 150 or Phil 150).
   - Fundamentals of language and literature: complete the following:

Admission to Degree Program

All degree programs in the Department of French and Italian are open enrollment.

The Discipline

The study of French or Italian language and literature sharpens analytical and communicative skills useful in a myriad of professional contexts. Students develop proficiency in listening, reading, writing, and speaking, and they learn to use literature as a means to deepen their understanding of culturally specific as well as universal issues and values.

Career Opportunities

Italian and French are valuable research and communication tools for students in music, art, history, European studies, international relations, library science, and comparative literature. Many have chosen a major or minor in Italian or French in addition to a second major or minor in an area such as accounting or business management, or as preparation for professional programs in public administration, business administration, organizational behavior, dentistry, law, or medicine.

Many of our students have opted for a career in government service, working with an embassy, the State Department, the CIA, and other government agencies.

Other students have gone into travel and tourism, working with tour agencies, airlines, major hotel chains, or resort communities.

The computer industry also provides employment opportunity for our graduates. Many computer companies have expanded into foreign markets and hire people who can translate computer and software instruction and sales publications in a foreign language.

Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

General Information

The Department of French and Italian strongly recommends that StDev 317, a 1-credit-hour course, be taken at the end of the

sophomore year or the beginning of the junior year. Because liberal arts degrees provide preparation in a variety of useful fields rather than a single career track, this course is recommended to help liberal arts students focus on specific educational and occupational goals and to identify the career options or educational opportunities available to them. The course will introduce them to the resources needed for accessing information about graduate schools, internships, careers, and career development. Students will learn basic employment strategies, including the steps necessary for obtaining employment related to their own specialty.

Internships Abroad. The Department of French and Italian in association with the French Embassy's Cultural Services offers spring/summer internships in France and Italy in a variety of positions: businesses, corporations, industry, hospitals, research laboratories, national and local governments, cultural organizations, nonprofit agencies and nongovernmental organizations, hotels and tourism, etc. Job placements are made according to the student's language proficiency, previous work experience, field of study, and personal interest. Students may enroll for Fren and Ital 399R, 211R, 311R, or 411R, or other courses such as Fren 490R. The internship proves invaluable in strengthening language skills.

Oral Proficiency Interview. All French-teaching majors and minors and all Italian majors are required to enroll in Fren 491 or Ital 491 and have an oral proficiency interview (OPI). French studies majors and French majors are required to take the OPI as part of the requirements for Fren 495. French teaching majors and minors are required to take the OPI before taking Fren 378. The minimum rating of *Advanced* is required of all *teaching* majors and minors. Appointments for the interviews are made through the department secretary. Students are strongly encouraged to complete Fren 411R prior to taking the OPI.

When it is necessary to strengthen oral proficiency, students are encouraged to take conversation courses. They should also take advantage of Foreign Language Housing, Study Abroad programs, summer internships abroad, and support materials in the Humanities Learning Resource Center, such as CDs, videos, and satellite broadcasts. The department strongly encourages all majors to complete an internship prior to graduation.

Instruction. All courses are taught in the target language unless indicated otherwise in this catalog.

General Information

Language Credit by Examination. A student enrolled full-time at BYU whose native language is not French may receive credit by special examination for French for which he or she has acquired the equivalent skill or knowledge. However, this is possible only if no university credit has been given through AP, CLEP, or transfer of equivalent credit from another university or other institutions.

The French Language for Credit Examination is administered by the French and Italian Department twice a year: in November during fall semester and in March during winter semester. Based on enrollment, the credit examination may be administered during spring and/or summer terms. Details about this examination will be given by the student's Fren 201, 202, or 321 teacher. Please note that students can test out of classes as follows, depending on a student's status:

Students who start with French 201 can test out of:

Fren 101 and 102 (8 hours).

Returned missionaries from Quebec or Creole-speaking missions, etc., who start with Fren 201 can test out of:

Fren 101, 102, and 211R (10 hours)

For returned missionaries to be eligible to take the exam, they need to be enrolled in Fren 201.

Returned missionaries from France, Belgium, Switzerland, etc., can test out of:

Fren 101, 102, 201, 211R, and 311R (16 hours)

For returned missionaries to be eligible to take the exam, they need to be enrolled in Fren 321.

Note 1: The above five classes are *not* part of a French major or minor. The first French minor class requirement is Fren 321.

Note 2: Fren 340 fulfills the GE Foreign Language option for returned missionaries from France, Belgium, Switzerland and other French-speaking countries. Fren 321 does not.

Accelerated Program. The department offers an accelerated course in beginning French (101 and 102) every fall and winter semester. These courses are offered on the term.

Foreign Language Student Residence. An excellent alternative to or preparation for foreign residency is offered through the Foreign Language Student Residence, where participants speak, eat, and live with a *French only* rule. This program, with numerous cultural opportunities, is available each semester to women and men who have completed at least one year of college French. Residents may also receive 2 hours of conversation credit per semester by enrolling in a specially designated section of 211R or 311R.

Study Abroad Programs. All students of French are encouraged to participate in a Study Abroad program. Study Abroad typically offers during spring and/or summer terms a language and civilization program in Paris, France. It provides an excellent opportunity for developing language proficiency and better understanding of the history and culture of France. Study Abroad also offers a semester-long program in Paris emphasizing general education courses.

General Information

Language Credit by Examination. A student enrolled full-time at BYU whose native language is not Italian may receive credit by special examination for Italian for which he or she has acquired the equivalent skill or knowledge. However, this is possible only if no university credit has been given through AP, CLEP, or transfer of equivalent credit from another university or other institutions.

The Italian Language for Credit Examination is administered by the French and Italian Department twice a year: in November during fall semester and in March during winter semester. Based on enrollment, the credit examination may be administered during spring and/or summer terms. Details about this examination will be given by the student's Ital 321 teacher.

Returned missionaries from Italy can test out of:

Ital 101, 102, 201, 211R, and 311R (16 hours)

Note 1: The above five classes are *not* part of the Italian minor. The first class for the Italian minor is Ital 321.

Note 2: Ital 340 fulfills the GE Foreign Language option. Ital 321 does not.

Eligible students can take the exam if they are enrolled or have successfully completed Ital 321.

Accelerated Program, Beginning: The department offers an accelerated course in beginning Italian (101 and 102) every fall and winter semester. These courses are offered on the term.

Foreign Language Student Residence. In addition to BYU's spring or summer term in Italy, intensive "live-in" experience is available based on enrollment in the Foreign Language Student Residence. Besides taking regular courses in the department, students participate in lectures, discussions, films, and related extracurricular activities under the supervision of native Italian head residents. Vital to the success of the program is the 24-hour *Italian only* rule whereby students use the Italian language as their only means of communication while they are at home.

Study Abroad / Internship Programs. All students of Italian are encouraged to participate in a Study Abroad (usually offered spring term, every other year) or internship program in Italy offered year round. These programs provide excellent opportunities for developing language proficiency and understanding the rich culture of Italy.

All degree programs in the Department of Germanic and Slavic Languages are open enrollment. However, special limitations apply for teaching majors.

The Discipline

Students of foreign language and literature develop fluency in another language as well as sensitivity to their own language and cultural heritage, to the contributions and diversity of other peoples, and to the advantages of an international perspective.

Career Opportunities

Experience with the intellectual, artistic, and spiritual expressions of other cultures and of their own culture helps students qualify for advanced study at graduate and professional schools, especially in linguistics, literature, language teaching methodology, library science, humanities, business, law, and medicine. Those who accept employment on completion of the BA degree frequently serve in international business, in education, or in a government agency.

General Information

The Department of Germanic and Slavic Languages strongly recommends that StDev 317, a 1-credit-hour course, be taken at the end of the sophomore year or the beginning of the junior year. Because liberal arts degrees provide preparation in a variety of useful fields rather than a single career track, this course is recommended to help liberal arts students focus on specific educational and occupational goals and to identify the career options or educational opportunities available to them. The course will introduce them to the resources needed for accessing information about graduate schools, internships, careers, and career development. Students will learn basic employment strategies, including the steps necessary for obtaining employment related to their own specialty.

Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

General Information

1. Beginning German courses (101, 102, 201, 202) will be waived for students having comparable German training or experience. Consult department for information about placement examinations.
2. All students will download a portfolio packet when they enroll in their first class in the German section. This portfolio will travel with the students as they progress from course to course through the degree program. It will serve as a checklist to guide them through their course of study, will record their language proficiency, and will also be a repository for all papers and creative work produced by the student in the department. The completed portfolio will be reviewed in Germ 400R in conjunction with the Senior Proficiency Exam.
3. *300-Level German Placement Test*: Before students register for Germ 301, 302, or 303, they must take the 300-Level German Placement Test. This test will determine the appropriate language course for each student. All majors and minors are required to take 302 and 303. Based upon test results, some students will be placed in Germ 301, which counts towards completion of the major or minor elective requirement, in order to strengthen their language skills before they enroll in 302 and 303.
4. A senior capstone paper is required for graduation.
5. Germ 400R is designed to help students of all levels who desire additional skill in speaking, etc.
6. In their final year, graduating seniors must register for 1 credit hour of Germ 400R in conjunction with the senior proficiency examination (offered fall and winter only). Portfolios should be completed and will be reviewed at the time of this exam.
7. Students planning graduate studies in German should begin a second foreign language.

Language Residency Programs

1. **German-language Study Abroad (Germ 201, 202, 211R, 344, 311R; 302 or 330).** An opportunity for developing language proficiency as well as for becoming better acquainted with the history and culture of Europe. Spring and summer terms. Prerequisite: Germ 102 or equivalent.
2. **German Internship Program (Germ 211R/311R, IAS 397R; Germ 399R or IAS 399R).** The BYU German program is pleased to offer a broad range of short-term internship opportunities in German-speaking countries. Students receive individual help to find and prepare for a work experience that will improve their German-language skills and provide a meaningful context for their academic studies. Completion of Germ 202, or an approved equivalent, with at least a B+ grade is required.
3. **Foreign Language Student Residence (Germ 211R, 311R).** An opportunity to live with other students who have pledged to use only German within the house and with head residents who are native speakers of German. Enrollment in a German class in addition to 211R and 311R is required while living in the house. Prerequisite: Germ 102 or equivalent.
4. **German-Speaking LDS Mission or Other Extended German-Speaking Residency.** Advanced students enroll in Germ 330 and, if desired, complete examinations for Germ 101, 102, 201, and 4 hours of 311R.
5. **Study at a German University.** The department strongly recommends that students spend their junior year at a German university taking courses that will apply toward the major. Universities in Germany charge no tuition, so, even though living costs are generally higher, with careful planning and modest financial support, most students find they can study at "Provo parity," that is, for about the same amount as a year of study in Provo. For advice about how to enroll and what financial support is available, contact the department office.

This Language Certificate program is administered by the Center for Language Studies (3086 JFSB), http://languagecertificate.byu.edu.

Any matriculated (degree-seeking) BYU student who meets the proficiency and course requirements may earn the German Language Certificate. The proficiency requirement is met through the nationally recognized ACTFL Oral and Writing Proficiency Exams. Qualifying students will be awarded a certificate on one of three levels based on the following:

1. Advanced Certificate: An ACTFL "Advanced" rating on at least one of the two proficiency exams and 9 hours of coursework with a minimum of a B- grade in each of the three courses.
2. Mastery Certificate: An ACTFL "Advanced High" rating on at least one of the two proficiency exams and 9 hours of coursework with a minimum of a B- grade in each of the three courses.
3. Professional Certificate: An ACTFL "Superior" rating on at least one of the two proficiency exams and 9 hours of coursework with a minimum of a B- grade in each of the three courses.

Required Courses:

Note: Students who have completed all of the coursework required for a language major or a language minor will also have satisfied the coursework requirement for the language certificate.

This Language Certificate program is administered by The Center for Language Studies (3086 JFSB), http://languagecertificate.byu.edu.

Any matriculated (degree-seeking) BYU student who meets the proficiency and course requirements may earn the Russian Language Certificate. The proficiency requirement is met through the nationally recognized ACTFL Oral and Writing Proficiency Exams. Qualifying students will be awarded a certificate on one of three levels based on the following:

1. Advanced Certificate: An ACTFL "Advanced" rating on at least one of the two proficiency exams and 9 hours of coursework with a minimum of a B- grade in each of the three courses.
2. Mastery Certificate: An ACTFL "Advanced High" rating on at least one of the two proficiency exams and 9 hours of coursework with a minimum of a B- grade in each of the three courses.
3. Professional Certificate: An ACTFL "Superior" rating on at least one of the two proficiency exams and 9 hours of coursework with a minimum of a B- grade in each of the three courses.

Required Courses:

Note: Students who have completed all of the coursework required for a language major or a language minor will also have satisfied the coursework requirement for the language certificate.

Humanities

The Discipline

The term *humanities* refers to the study of human intellectual and artistic creativity and the record of human experience as seen in the arts. It is an interdisciplinary major drawing from history, fine arts, literature, intellectual history, music, foreign languages, etc. In this major the student focuses on the arts as modes of human expression and how the arts combine to give a unique view of what it has meant to be human through the ages—and how they continue to influence us today. Besides teaching the interrelatedness of the arts, the study of humanities emphasizes the relationships between the arts and other aspects of human culture and society.

The major offers students unusual latitude in developing a broad and full program in the liberal arts, as well as developing skills in reasoning, language, writing, and library use—all essential elements for later independent learning as well as for functioning well in society.

Career Opportunities

The interdisciplinary nature of the major makes it an excellent preparation for graduate work in humanistic disciplines and professional schools and also for a wide range of employment, including secondary teaching. Humanities graduates going directly into the work force commonly find professional employment in education, business, government, tourism, and civil or foreign service. Those going on to graduate school usually work toward the doctorate or attend professional programs in such disciplines as library science, law, business, public administration, and medicine.

Admission to Degree Program

All degree programs in the Department of Humanities, Classics, and Comparative Literature are open enrollment. However, special limitations apply for teaching majors.

General Information

The Department of Humanities, Classics, and Comparative Literature strongly recommends that StDev 317, a 1-credit-hour course, be taken at the end of the sophomore year or the beginning of the junior year. Because liberal arts degrees provide preparation in a variety of useful fields rather than a single career track, this course is recommended to help liberal arts students focus on specific educational and occupational goals and to identify the career options or educational opportunities available to them. The course will introduce them to the resources needed for accessing information about graduate schools, internships, careers, and career development. Students will learn basic employment strategies, including the steps necessary for obtaining employment related to their own specialty.

Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes

- Create and share a persuasive analysis of folklore texts in context by using "logical reasoning and critical analysis."
- Identify and remember three categories of folklore, four types of folk narrative, and eight folk groups.
- Produce several brief folkloristic observations, and document those observations using established formats.
- Understand some methods of recording and archiving local traditions using "moral discrimination, creative imagination, and independent thought."
- Explain the choices and forces that help perpetuate or extinguish traditional practices, both locally and globally.
- Identify the shaping functions and theory of folklore.
- Produce a focused fieldwork project which includes, among other requirements, an essay, collection, and consent forms created according to the William A.Wilson Folklore Archive.

ENGL 392 : American Folklore. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ENGL 251

DESCRIPTION: American folk art and literature and the historical and cultural circumstances from which they developed.

Course Outcomes

- Document folklore using established formats and understand some methods of recording and archiving local traditions in order to "analyze rigorously" American texts and artifacts in context and in terms of how "the American experience has been, and continues to be, constructed and transmitted."
- Identify and remember 3 categories of folklore; 4 types of folk narrative; 8 folk groups.
- Relate worldview with the performance of traditions, comparing similarities and differences of groups with differing worldviews and obtaining a wider view of American history and diversity.
- Reason intelligently in oral and written discourse while allowing that traditions are meaningful to participants in places and times different from your present circumstances.
- Work independently to connect folklore studies with other course work and life experiences and goals.
- Get excited about personal, group, and aesthetic dynamics in the performance of traditions and "question ethically" the choices and forces that help perpetuate or extinguish traditional practices, both locally and globally.

ENGL 393R : Studies in Folklore. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: ENGL 391

DESCRIPTION: Focused themes and topics in folklore. Topics may include regional or transnational folklore, folklore genres, folk groups, ethnographic research, cross-disciplinary issues, and history of folklore studies.

c. Environmental Humanities:

ANTHR 300 : Biological Anthropology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
DESCRIPTION: Relationships between human biology, environment, social structure, and culture. Concepts and data on race, primates, evolution, population genetics, growth, and sociobiology.

Course Outcomes

- Develop an understanding of the relationships between human biology, environment, social structure.
- Collect data on race, primates, evolution, population genetics, growth, and sociobiology.

BIO 130 : Biology. (4:3:1)

WHEN TAUGHT: Fall; Winter
DESCRIPTION: General biology course with laboratory for biology majors. Introduction to disciplines in the life sciences including methods for scientific inquiry, biochemical dynamics, cell structure and function, evolutionary theory, bioenergetics, and ecological interactions.

Course Outcomes

- Students will demonstrate basic literacy in the language of science and an understanding of the foundational theories of biology (i.e., be able to formulate appropriate hypotheses and predictions to test specific biological phenomena and use appropriate vocabulary to do so) o Atomic Molecular Theoryo Cell Theoryo Theories of Photosynthesis, Fermentation, and Cellular Respirationo Cell Division and Meiotic Theorieso Chromosomal and Mendelian Theories of Inheritanceo Watson and Crick's Theory of DNA Structure and Replicationo Protein Synthesis Theoryo Darwin's Theory of Natural Selectiono Hardy-Weinberg Theoryo Ecosystem Theoryo Population Growth Theoryo Competitive Exclusion and Behavioral Theory
- Students will demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strengths and weaknesses of this process.
- Students willappreciate the excitement of discovery that has accompanied important scientific developments.
- Students will demonstrate how scientific methodology can be used to analyze real-world science-related problems.
- Students will be able to evaluate scientific data and claims in order to make rational decisions on public-policy science issues that affect their community.

- Students will be able to express their thoughts (in oral, graphical, and written formats) on scientific topics clearly, including appropriate use of basic scientific vocabulary and effective interpretation of quantitative data.
- Students will be able to reflect rationally upon the interface between science and religion.
- Students will demonstrate sound scientific reasoning ability.

BIO 220A : Biological Diversity: Animals. (4:3:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Comparative organization and evolutionary significance of morphological, physiological, reproductive, and ecological differences in invertebrates and vertebrates. Laboratory included.

Course Outcomes

- Students will be able to discuss the broad patterns of the evolution of the clade Animalia, emphasizing the relationships among major sub-clades (phyla), the unique biological attributes that define these clades, and the novel changes in morphology over major transitions (unicellular to multicellular; acoelomate to pseudocoelomate to coelomate body plans, bilaterial vs radial symmetry, origins of exoskeletons, gill slits, notochord, crania & vertebral columns, etc.).
- Students will develop the skills necessary to understand the terminology of phylogenetic systematics and methods used to recover the “tree of life”, the logic behind the hierarchy (i.e., the only possible outcome of the process of “descent with modification”), and critically apply evolutionary reasoning, including the use of phylogeny and tree-thinking, to formulate and test hypotheses that explain biological diversity.
- Students will have the intellectual tools to continue to explore related topics with confidence and understanding throughout their lives, and a deeper appreciation for the diversity of life on earth.

BIO 220B : Biological Diversity: Plants. (4:3:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Comparative organization and evolutionary significance of morphological, physiological, reproductive, and ecological differences in fungi, algae, and principal groups of land plants. Laboratory included.

Course Outcomes

- Students will be able to discuss differences between cyanobacteria, algae, bryophytes, non-seed vascular plants, gymnosperms, flowering plants, and fungi with repsect to their lifecycles, characteristic morphologies, and biological roles.
- Students will develop the skills necessary to understand and critically apply evolutionary logic including the use of phylogeny and tree-thinking to formulate and test hypotheses that explain biological diversity
- Students will be able to continue to explore related topics with confidence and understanding throughout their lives.

BIO 347 : Religion and the Environment. (3:3:3)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Introductory biology or instructor's consent.

DESCRIPTION: The role religion has played historically in defining how humans relate to nature and its creatures. How religion frames environmental values and ethics today, emphasizing LDS viewpoints.

Course Outcomes

- develop skill in writing about nature, religion, and the environment
- gain familiarity with the relationship between religion and environmental through reading primary literature
- come to appreciate approaches to faithful responses to caring for the Earth and its processes.

BIO 350 : Ecology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Distribution and abundance of organisms and their interactions with the physical and biotic components of the earth.

Course Outcomes

- Understand the major physical processes that form and characterize the biosphere, including global scale energy flow, the carbon cycle, climate, and soil formation.
- Understand the processes that drive major levels of organization of the biotic world, including energetics in the ecosystem, population dynamics, and species interactions.
- Understand the importance of writing as a way of synthesizing and solidifying critical thought.
- Foster and promote environmental stewardship within your realm of influence and your community.
- Understand the importance of ecology to issues regarding human well-being
- See the connectivity and relevance of ecology to other fields of study

BIO 370 : Bioethics. (2:1:3)

Classics

The Discipline

Classical Studies examine ancient Greek and Roman cultures—their languages, literature, history, religion, art, and philosophy.

The major offers essential knowledge of philology, ancient history, archaeology, biblical studies, and the literary and cultural tradition of Western Europe, as well as traditional grounding in the Classics. Students acquire important foreign-language study skills that include careful reading, thoughtful writing, and persuasive speaking. Latin is the mother language not only of Italian, French, Spanish, and Portuguese, but in a real sense of English as well. Its study will especially enhance one's understanding of English vocabulary, grammar, and rhetorical structure.

Greek and Roman History. Classics has the responsibility for staffing and administering offerings in Greek and Roman history. Courses in these fields are offered under Classical Civilization, Classics, Greek, and Latin. Some of these courses are cross-listed with history, and several may count toward a history major. See the History section of this catalog for details.

Classical Civilization. Classical Civilization courses presuppose no knowledge of the Greek or Latin languages and are open to all students. They are especially recommended for those who want to understand the ancient traditions underlying modern culture.

Career Opportunities

Majors in Classical Studies find employment in a variety of fields, including business, education, library science, tourism, and civil and foreign service. They are also excellent candidates for graduate work in other humanities-related disciplines and professional schools (law, business, and medicine).

Comparative Literature

The Discipline

Comparative Literature is the study of literature in its totality. The Comparative Literature major not only acquaints students with literary study beyond the confines of any particular national tradition but also with the relationship between literature and other areas of knowledge. Combining the synthesizing skills and knowledge related to individual national literatures, the comparative literature major utilizes a wide range of linguistic and philosophical knowledge unique to an undergraduate program. Pursued as a major, the field offers students unusual latitude in developing a broad and full program in the liberal arts, as well as developing competence in reasoning, language, writing, and research—essential for later independent learning.

Career Opportunities

Comparative Literature majors are well prepared for graduate programs in languages and literature and for employment in the foreign service, library science, business, education, and tourism. In addition, comparative literature is an outstanding preprofessional major for those interested in law, public administration, management, and medicine.

Program Requirements | View MAP | View Program Outcomes

1. Acquire a thorough knowledge of two language traditions relevant to individual program of study (one of these may be English for students who emphasize the Anglo-American literary tradition)(approximately 16–32 hours). Competence will normally be demonstrated in course work, but an examination may be required. If planning advanced work in comparative literature, students should gain reading knowledge of both an additional modern language and a classical language.

2. Complete a reading list (determined in consultation with a faculty advisor) and submit a writing portfolio. During the final semester enroll in CmLit 497 to complete a written examination on the reading list and to have the portfolio reviewed.

   CmLit 201 & 202 or CmLit 211 & 212 are strongly recommended, in part because the reading list core consists of texts treated in these courses. Students who do not complete a literature-based civilization sequence are at a disadvantage in working systematically through the list.

3. Course configuration must be approved by department advisor.

4. Complete the following:

   CMLIT 310 : Introduction to Literary Analysis and Comparative Literature. (3:3:0)
   PREREQUISITE: Reading knowledge of at least one foreign language.
   DESCRIPTION: Methods of literary analysis, emphasizing basic issues of comparative literature and prosody and other problems related to foreign language texts.

   Course Outcomes
   There are no course outcomes available

   CMLIT 342 : Asian Literary Traditions. (3:3:0)
   DESCRIPTION: Comparative analysis of Asian literary works spanning several traditions.

NOTE: Entry course for returned missionaries or others with equivalent Swedish language experience. Required course for obtaining language credit by examination (Swed 101, 102, 201, 211R). Culminating course for GE Foreign Language requirement.

Course Outcomes

- Students should better know how to understand, interpret, and thoughtfully reflect upon the literature and art they will encounter in later life.
- Students should be able to insightfully analyze important literary and artistic works from Swedish cultural history and be able to communicate this analysis through articulate and well-organized written and oral presentations in Swedish. Students will also develop basic research skills.
- Students should understand key historical trends and works from Swedish culture, recognize connections between these works, and be able to relate them to the development of contemporary cultural developments.
- Students will be able to relate the ideas and issues raised by the works studied in class to their own cultural situation as well as to their experience with contemporary Swedish culture. They will reflect upon and develop an appreciation for the expression of ideas that make up Swedish cultural history and even value the expression of perspectives and opinions they do not necessarily share.

SWED 399R : Academic Internship. (.5-9:0:0)

PREREQUISITE: Department's consent.

DESCRIPTION: On-the-job experience in Swedish.

Advanced Language and Culture Courses (for returned missionaries and

others of comparable ability)

The advanced language and culture courses are a popular enrollment option for returned missionaries and others of comparable ability.

During this course, students are offered the opportunity to take a Challenge Examination whereby they may bypass beginning language classes and earn up to 16 graded credits.

Note 1: If the course is not offered at the time the student is interested in taking the Challenge Exam, the student has the option of taking the FLATS tests (through the Foreign Language Achievement Testing Service) on campus. However, that test only offers 12 pass/fail credits. **Once the FLATS test is taken for pass/fail credit it may not be reevaluated for graded credit, *nor* may the Challenge Exam be taken at a later date.** (See http://flats.byu.edu for details.)

Note 2: Students may not take a FLATS test during any semester in which a "challenge exam course" for the targeted language is being offered.

Note 3: Many of these advanced language and culture courses satisfy the Languages of Learning (and/or other) GE requirements. Be sure to check the GE website to confirm the possibilities.

Admission to Degree Program

All undergraduate degree programs in the Department of Linguistics and English Language are open enrollment.

The Discipline

Linguistics is the study of language in all its aspects—from speech sounds to sentence formation to meaning; from how language is organized and used in a social setting to how it is organized and processed in the brain or by computers. Linguists study language form, language change, language acquisition, and even the texts in which language is recorded. Linguists recognize that the communicative power of language is what brings cohesion to all human enterprises. For the student interested in the nature of language, linguistics is the subject to study.

The science of linguistics has many real-world applications, including translation, information storage/retrieval, lexicography, editing, and language teaching. In addition to its majors in general linguistics and in English language, BYU's Department of Linguistics and English Language offers undergraduate minor programs (as well as graduate degrees) in several of these areas.

Career Opportunities

A linguistics degree with an emphasis in computers may lead to jobs in high technology, e.g., machine translation, information retrieval, speech recognition and production software, and lexicography. Linguistics is also recognized as a strong specialization for those pursuing a career in military intelligence or technical writing.

The English language major is in many ways similar to the linguistics major, though its focus is more specifically on English linguistics. The major provides useful preparation for careers that require special attention to the English language, such as advertising and technical writing. The English language major along with a TESOL or editing minor is an especially strong combination.

The teaching of English to speakers of other languages is an applied linguistics area of high demand, both within the United States and around the world. Beginning Fall 2010, both a TESOL minor and TESOL certificate will be offered at the undergraduate level.

In addition, the linguistics and English language majors are excellent preparations for those planning graduate studies in areas as diverse as law, international business, tourism, library science, TESOL, communicative disorders, and speech pathology, not to mention graduate studies in specific languages or in linguistics itself.

General Information

The Department of Linguistics and English Language strongly recommends that StDev 317, a 1-credit-hour course, be taken at the end of the sophomore year or the beginning of the junior year. Because liberal arts degrees provide preparation in a variety of useful fields rather than a single career track, this course is recommended to help liberal arts students focus on specific educational and occupational goals and to identify the career options or educational opportunities available to them. The course will introduce them to the resources needed for accessing information about graduate schools, internships, careers, and career development. Students will learn basic employment strategies, including the steps necessary for obtaining employment related to their own specialty.

Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

DESCRIPTION: Linguistic analysis of connected speech or written discourse, especially larger linguistic units above the clause level, such as conversational exchanges or written texts.

Course Outcomes

- Students will be able to demonstrate knowledge of the ways that discourse is structured in a variety of genres and registers, including spoken conversational discourse and written academic discourse.
- Students will be able to identify and critically evaluate sources relevant to issues concerning discourse analysis.
- Students will be able to evaluate and appropriately apply various methods and approaches to the analysis of authentic English discourse and effectively communicate their findings.

ELANG 421R : Studies in Language or Editing. (3:3:0)

DESCRIPTION: Topics vary.

Course Outcomes

- Students will be able to use information-design theory to improve their critiques of text features and to create new text design which is improved in both practical and ethical terms.
- Students will be able to use traditional editing rules to evaluate texts and revise text (format and information structure).
- Students will be able to explain how information-design theory can reconcile tensions between traditional editing rules that may come into conflict.

ELANG 468 : Varieties of English. (3:3:0)

PREREQUISITE: ELANG 223; or LING 201

DESCRIPTION: Regional and social variation in English, especially standard and nonstandard national and world Englishes such as English-based pidgins and creoles.

Course Outcomes

- Students will learn the basic properties of several varieties of English.
- Students will be able to understand the basic terminology as well as the theoretical and social issues associated with studying varieties of English.
- Students will learn to collect and analyze data using several data collection methods.
- Students will collect and analyze data on a topic of their choice and present their findings in a research paper.

ELANG 521R : Studies in Language. (3:3:0)

PREREQUISITE: ELANG 223; or LING 201; or equivalent.

DESCRIPTION: Topics vary.

Course Outcomes

- By the end of the course, students will have read extensively on a topic determined by the instructor.
- Students will be able to identify and outline some of the principal issues and contextual matters related to the designated topic area as well as to identify the principal sources and methods for resolving questions related to that topic area.
- By the end of the course, students will have prepared a substantial paper or project that demonstrates their mastery of material related to a specific issue or question within the topic area.

: English Spelling.

Course Outcomes

ELANG 522 : Language Policy and Planning in English Language Contexts. (3:3:0)

PREREQUISITE: ELANG 223; or LING 201; or equivalent.

DESCRIPTION: Theories and practices of governing entities as they formulate policies relating to the status and codification of the English language.

Course Outcomes

- Students will be able to apply fundamental language planning theories and practices toward solving real-world English language macro and micro planning problems.
- Students will be able to understand, interpret, explain, analyze, and assess representative texts and practices in English language planning and policy development.
- Students will be able to conduct research using appropriate language planning and policy theory and practice models in English language contexts.

ELANG 524 : History of the Book. (3:3:0)

DESCRIPTION: History and development of the book, including modern methods and practices.

Course Outcomes

- Students will be able to describe the history of the book and the reasons it has developed the way it has.
- Students will be able to describe and show how the book (the codex, in particular) is physically constructed and produced.
- Students will be able to describe the development of scripts and fonts and the reasons they have changed over time.
- Students will be able to describe what goes into making a book look beautiful (design, typography, construction, usefulness, etc.).
- Students will be able to describe the fundamentals that underlie how texts change and develop over time, including the kinds of transmission errors that occur.

ELANG 525 : Old English 1. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: ELANG 324; or equivalent.

DESCRIPTION: Old English grammar and vocabulary; traditional syntactical patterns in various types of Old English prose and poetry.

Course Outcomes

- Students will be able to read Old English texts with the aid of a glossary and grammar and how to contextualize the content of the texts with Anglo-Saxon culture.
- Students will have learned the basic grammatical and syntactic structures of Old English.
- Students will be able to describe the differences between Old English and Present-day English and note the changes that occurred between the two stages of English.
- Students will be able to describe the major dialects and genres of Old English writings.

ELANG 526 : Middle English. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: ELANG 324; or equivalent.

DESCRIPTION: Detailed study of the principal dialects of Middle English, as illustrated in the literature of the period.

Course Outcomes

- Students will be able to identify some of the most important ways that Middle English differs from Present-day English and Old English and tell how the language is in the process of changing in Middle English.
- Students will be able to read a Middle English text, with a little help from a glossary or dictionary.
- Students will be able to identify the major dialect differences in Middle English.
- Students will be able to explain concepts of language contact and sociolinguistics as exemplified by Middle English.

ELANG 527 : Early Modern English. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: ELANG 324; or equivalent.

DESCRIPTION: English language from about 1500 to 1800, with special emphasis on language of Shakespeare and the King James Bible.

Course Outcomes

- Students will be able to identify the phonological, morphological, syntactic, lexical, pragmatic, and orthographic characteristics of Early Modern English and how those characteristics are distinguished from Present Day English.
- Students will be able to identify important historical, social, and linguistic factors that influenced the development of the language during the Early Modern Period, including the development of modern prescriptive norms.
- Students will be able to apply their understanding of Early Modern English to the interpretation of contemporary texts, including passages from the works of Shakespeare and the King James translation of the Bible.

ELANG 529 : Structure of Modern English. (3:3:0)

WHEN TAUGHT: Spring Contact Department

PREREQUISITE: ELANG 325; or instructor's consent.

DESCRIPTION: English syntax through modern grammars; theories underlying those grammars.

Course Outcomes

- Students will be able to identify the various characteristics, features, and behaviors of the lexical and structural classes, as well as the larger phrase, clause, and sentence types within the English language.
- Students will be abel to identify some of the important reference works and resources that are available to answer questions about English grammatical structure and how they might appropriately be applied.
- Students will be able to demonstrate how grammatical knowledge can be consciously applied in a variety of analytical and applied language tasks.

ELANG 535 : Language and Literature. (3:3:0)

WHEN TAUGHT: Spring Contact Department

PREREQUISITE: ELANG 223; or LING 201; or equivalent.

DESCRIPTION: Literature from a language perspective; applying linguistic constructs to literary language; examining literary style; linguistic analysis of unfamiliar texts.

Course Outcomes

- Students will have become acquainted with important philological principles.
- Students will be able to analyze literary texts using poetic formulas, including simple and complex figures.
- Students will be able to analyze literary texts using philological criticism, including contextual relations.
- Students will understand how an online corpus might be used effectively to analyze literary texts.
- Students will be able to create literary texts using language features identified within the course.

ELANG 548 : Old English 2. (3:3:0)

PREREQUISITE: ELANG 525

DESCRIPTION: Additional reading in Old English, emphasizing sound changes, dialects, and textual production.

Course Outcomes

- By the end of the course students will have achieved a greater fluency within the Old English language.
- Students will have translated the entire epic poem, Beowulf.
- Students will be able to identify the features in Beowulf that exemplify the conventions of Old English heroic verse and the larger cultural context of the heroic society.
- Students will be able to provide examples of contrasting Old English lexical uses, including ones involving metaphor and synonymy among words within the poem as well as differences between the lexical forms in the poem and other Old English texts.

LING 325 : Theoretical Syntax. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: For Fall 2013 & forward admits, Ling 220.

DESCRIPTION: Theoretical comparison and contrast of different sentence types. Methods of argument to develop and critique generative theories of lexical categories, grammatical roles, and syntactic structure.

Course Outcomes

- Recognize and classify different types of constituents, including phrases and sentences.
- Understand and apply a theoretical framework and analytical techniques to determine and describe constituents.
- In writing and speaking, argue for (or against) particular theory dependent interpretations of structure, and support the argument with empirical evidence.
- Apply these outcomes to English and investigate their relevance to other languages.

LING 450 : Introduction to Historical-Comparative Linguistics. (3:3:0)

WHEN TAUGHT: Winter; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 210 and Ling 220.

DESCRIPTION: Theory and method of language change via comparison of daughter languages and reconstruction of their ancestral language: phonological, morphological, semantic, and lexical.

Course Outcomes

- Students will be able to apply the comparative method and internal reconstruction in order to hypothesize earlier states of a language and to examine the relatedness of different languages.
- Students will be able to explain how and why linguistic changes occur in phonology, morphology, syntax, semantics, and the lexicon.
- Students will be able to explain how linguistic change is affected by language contact and psychological, physical, social, and cultural factors.
- Students will be able to use corpora, texts, and lexicons in order to obtain data on, and answer questions about, language change.

LING 485 : Corpus Linguistics. (3:3:0)

PREREQUISITE: For Fall 2013 & forward admits, Ling 240.

DESCRIPTION: Using large collections of texts for teaching and particularly for research, including many types of linguistic variation

Course Outcomes

- Students will be able to understand how corpora and corpus-based materials can best be used for teaching and learning. They will carry out an in-depth investigation of one particular linguistic phenomenon using the best available corpora and corpus-based tools.
- Students will be able to apply the basic principles of corpus design and construction to design a corpus for their area of interest.
- Students will be able to understand the differences between corpus-based/empirical and rationalist/non-empirical approaches to linguistics.
- Students will be able to use text analysis tools to investigate frequency, keywords, and do simple

concordancing.
- Students will be able to use corpora to carry out research in the areas of 1) lexicography 2) genre-based differences in language 3) syntax 4) semantics, and 5) historical change.

LING 545 : Psycholinguistics. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: For Fall 2013 & forward admits, Ling 210 or ELang 223; or equivalent.

DESCRIPTION: How the mind interprets, stores, retrieves, and produces language. Anatomical structures and physiological processes of the brain dealing with language.

Course Outcomes
- Discuss basic terminology, theories, and issues of psycholinguistics.
- Know the basic findings in each area of psycholinguistics (including comprehension, production, acquisition, and language disorders).
- Read and critically respond to psycholinguistic research and articles.
- Create and participate in psycholinguistic experimental research.

LING 550 : Sociolinguistics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: For Fall 2013 & forward admits, Ling 210 or ELang 223; or equivalent.

DESCRIPTION: Research and theory in anthropological linguistics and sociolinguistics.

Course Outcomes
- Understand the relationship between language use and society with respect to regional, social, ethnic and contextual variation.
- Conduct research into a wide range of sociolingusitic variation
- Impart knowledge of sociolinguistics and related research in presentations and papers

LING 551 : Anthropological Linguistics. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: For Fall 2013 & forward admits, Ling 220 and Ling 230; or equivalent.

DESCRIPTION: Language in culture and society: development, typology, and description.

Course Outcomes
- Upon completion of this course students will be equipped with the conceptual tools to think about and analyze linguistic data in social contexts of use.
- Student will become conversant with foundational texts which inform our cultural understanding and use of language.
- Through readings, weekly exercises and discussions they will acquire the metalinguistic concepts necessary for contextualizing varieties of language.
- In class transcription sessions will address the representation of linguistic data, and how that representation may affect one's assessments of semantic intent.

LINGC 200 : Basic Humanities Computing Skills. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Word processing experience.

DESCRIPTION: Software applications for computer-based instruction, academic publishing, and research; introduction to programming new applications.

Course Outcomes
- Understand the basics of text markup formats, including XML.
- Be able to obtain processable text files using various methods, including OCR, Web page extraction, and speech recognition.
- Understand the basics of representing language in text, including Unicode.
- Be able to perform text searches using various tools.
- Understand the kinds of language tasks performed by natural language processing.

LINGC 220 : Linguistic Computing Programming 1. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: LingC 200 or C S 100 or equivalent experience.

DESCRIPTION: Computer programming for language applications: data types, character representation, flow of control, file input/output, string manipulation.

Course Outcomes
- Understand what a computing algorithm is, as opposed to instructions intended for a human who as agency.
- Be able to manipulate digital information using algorithms written in a programming language. This includes an ability to understand and write assignment statements, loops, conditionals, and functions.
- Be able to manipulate digital information using algorithms written in a programming language. This includes an ability to understand and write assignment statements, loops, conditionals, and functions.
- Be able to create a simple graphical user interface for a software application.

LINGC 260 : (LingC-DigHT) Programming for Text Processing and Analysis. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: LingC 200 or C S 100 or equivalent experience.

DESCRIPTION: Intermediate techniques with programming languages and toolkits suited for use with text

analysis. Introduction to preparation and analysis of electronic texts.

Course Outcomes
- Understand how text is represented in computers. This includes 8-bit code points and various encodings of Unicode.
- Be able to construct regular expressions and apply them to text files to search for patterns and make changes.
- Be able to use a regular expressions in conjunction with a procedural scripting or general purpose programming language.

LINGC 355 : (LingC-DigHT) Text Encoding and Markup. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: DIGHT 250; or DIGHT 260; or LINGC 260

DESCRIPTION: Principles of markup languages (SGML, XML, etc.) and encoding standards for academic content. Practical experience encoding, processing, and delivering marked-up data.

Course Outcomes
- Be able to discuss the challenges of authoring, editing, and publishing electronic text in the Humanities.
- Develop a firm understanding of the principles of the extensible markup language (XML) and its relationship to HTML.
- Be able to use some of the most common standards for document, syndication, metadata, and multimedia markup.
- Be able to create repositories of electronic texts and write stylesheets that transform the data within the context of an original project.

LINGC 360 : International Software and Text Processing. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: LingC 220 or equivalent experience.

DESCRIPTION: Developing international software that can be available in English and other languages. Globalization, internationalization, localization, Unicode, fonts, multilingual user interfaces, and working with foreign language texts.

Course Outcomes
- Understand the issues of software localization.
- Understand some common techniques for internationalizing software.

LINGC 361 : Speech Processing. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Programming experience; instructor's consent.

DESCRIPTION: Analyzing and manipulating speech data. Developing software applications that include speech recognition and/or speech generation.

Course Outcomes
- Understand the basics of phonetic, phonological, and lexical aspects of speech processing.
- Write basic programs in Java.
- Design and implement user interface procedures in Java, in a Unix or Windows environment.
- Use common data structures and formats in speech-related processing.
- Design and implement speech-based processing programs using widely available speech toolkits.

LINGC 489R : Linguistic Computing Project. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Any 300-level linguistic computing course.

DESCRIPTION: Applying principles from other courses to a substantial research or development project. Students work individually with faculty and technical advisors.

Course Outcomes
- Design and implement a language-related software application that satisfies the requirements of a faculty or staff member, drawing on the expertise of a faculty or staff technical advisor.

Note 1: Only one digital humanities and technology (DigHT) or linguistics computing (LingC) course can be used to fill this requirement.

Note 2: The courses chosen to satisfy items three and four above can NOT double count in this requirement.

6. Complete 12 credit hours of university course work (or the equivalent) to a 200-level or higher in any single language. This may be the same language used to satisfy the GE Foreign Language option. (Note that the GE Foreign Language option may require more coursework than this requirement for the English language major.) A language relevant to the historical development of English is strongly recommended, namely Latin, French, German, or classical Greek.

Program Requirements | View MAP | View Program Outcomes

1. Complete the following prerequisite course:

LING 201 : Introduction to Linguistics (Modern). (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Basic understanding of linguistic systems. Phonology, morphology, syntax, semantics, and pragmatics.

Course Outcomes
- Be familiar with some of the major subfields of linguistics and the main topics of interest within each subfield.
- Demonstrate understanding of phonological, morphological, and syntactic structure.
- Master techniques of basic phonological, morphological, syntactic, and historical analysis.

2. Complete the following core courses:

LING 210 : Sounds of Language. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 201.

DESCRIPTION: Introduction to the description and analysis of speech sounds.

Course Outcomes
- Transcribe and give articulatory descriptions for common speech sounds of the world's languages, including those of English
- Explain common phonetic processes.
- Complete basic phonological analyses using knowledge ofthe phonemic principlethe content and organization of phonological featuresthe elements of prosody (syllable, stress, etc)

LING 220 : Structure in Language. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 201.

DESCRIPTION: Introduction to the analysis of word and sentence structure.

Course Outcomes
- Complete basic syntactic analyses using knowledge ofparts of speechconstituent structuregrammatical relations
- Complete basic morphological analyses using knowledge ofbasic word formation processesthe distinction between inflection and derivation and common inflectional categoriesproperties of the interfaces of morphology with phonology and syntax
- Describe the results of analyses using appropriate terminology and formalisms.

LING 230 : Meaning in Language. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 201.

DESCRIPTION: Introduction to the analysis of meaning in words, grammar, and discourse.

Course Outcomes
- Conduct semantic and pragmatic analyses and explications of natural human language at the lexical, grammatical, discourse and metaphorical levels applying a variety of semantic and pragmatic analytical procedures
- Critique contemporary approaches to semantic and pragmatic analyses by becoming familiar with semantic and pragmatic theories.
- Argue for a particular semantic or pragmatic explication through producing papers and project reports.

LING 240 : Linguistic Tools 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 201.

DESCRIPTION: Introduction to quantitative and qualitative research methods in linguistics.

Course Outcomes
- Be able to formulate testable hypotheses concerning language.
- Be able to collect linguistic data using interviews, surveys, experiments, corpora, etc
- Be able to use appropriate tools to analyze linguistic data.
- Be able to describe the results of linguistic research using appropriate terminology and rhetorical strategies (i.e., talk and write like a linguist).

3. Complete two courses from the following:

ELANG 362 : Discourse Analysis. (3:3:0)

PREREQUISITE: ELANG 223; or LING 201

DESCRIPTION: Linguistic analysis of connected speech or written discourse, especially larger linguistic units above the clause level, such as conversational exchanges or written texts.

Course Outcomes
- Students will be able to demonstrate knowledge of the ways that discourse is structured in a variety of genres and registers, including spoken conversational discourse and written academic discourse.
- Students will be able to identify and critically evaluate sources relevant to issues concerning discourse analysis.
- Students will be able to evaluate and appropriately apply various methods and approaches to the analysis of authentic English discourse and effectively communicate their findings.

LING 310 : Phonetics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: For Fall 2013 & forward admits, Ling 210.

DESCRIPTION: General inventory of speech sounds possible in language, from both an acoustic and articulatory point of view.

Course Outcomes
- Produce and transcribe approximately 100 of the sounds of the world's languages and describe the articulatory and acoustic properties of these sounds.
- Transcribe and explain the phonetic processes common to languages of the world.
- Perform field work in phonetics—learning to record and acoustically analyze phonetics data.
- Recognize the phonetic systems of several languages and how and why the languages are organized the way they are.

LING 315 : Phonology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 210.

DESCRIPTION: Study of natural language sound systems from a variety of theoretical perspectives.

Course Outcomes
- Use a theoretical model to complete a phonological analysis at an intermediate level using appropriate methods and techniques,
- Present the results of phonological analyses, showing awareness of foundational issues in theories of phonology.

LING 320 : Morphology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 220.

DESCRIPTION: Theory and analysis of word structure in human language.

Course Outcomes
There are no course outcomes available

LING 325 : Theoretical Syntax. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: For Fall 2013 & forward admits, Ling 220.

DESCRIPTION: Theoretical comparison and contrast of different sentence types. Methods of argument to develop and critique generative theories of lexical categories, grammatical roles, and syntactic structure.

Course Outcomes
- Recognize and classify different types of constituents, including phrases and sentences.
- Understand and apply a theoretical framework and analytical techniques to determine and describe constituents.
- In writing and speaking, argue for (or against) particular theory dependent interpretations of structure, and support the argument with empirical evidence.
- Apply these outcomes to English and investigate their relevance to other languages.

4. Complete one course from the following:

LING 450 : Introduction to Historical-Comparative Linguistics. (3:3:0)

WHEN TAUGHT: Winter; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 210 and Ling 220.

DESCRIPTION: Theory and method of language change via comparison of daughter languages and reconstruction of their ancestral language: phonological, morphological, semantic, and lexical.

Course Outcomes

- Students will be able to apply the comparative method and internal reconstruction in order to hypothesize earlier states of a language and to examine the relatedness of different languages.
- Students will be able to explain how and why linguistic changes occur in phonology, morphology, syntax, semantics, and the lexicon.
- Students will be able to explain how linguistic change is affected by language contact and psychological, physical, social, and cultural factors.
- Students will be able to use corpora, texts, and lexicons in order to obtain data on, and answer questions about, language change.

LING 485 : Corpus Linguistics. (3:3:0)

PREREQUISITE: For Fall 2013 & forward admits, Ling 240.

DESCRIPTION: Using large collections of texts for teaching and particularly for research, including many types of linguistic variation

Course Outcomes

- Students will be able to understand how corpora and corpus-based materials can best be used for teaching and learning. They will carry out an in-depth investigation of one particular linguistic phenomenon using the best available corpora and corpus-based tools.
- Students will be able to apply the basic principles of corpus design and construction to design a corpus for their area of interest.
- Students will be able to understand the differences between corpus-based/empirical and rationalist/non-empirical approaches to linguistics.
- Students will be able to use text analysis tools to investigate frequency, keywords, and do simple concordancing.
- Students will be able to use corpora to carry out research in the areas of 1) lexicography 2) genre-based differences in language 3) syntax 4) semantics, and 5) historical change.

LING 550 : Sociolinguistics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: For Fall 2013 & forward admits, Ling 210 or ELang 223; or equivalent.

DESCRIPTION: Research and theory in anthropological linguistics and sociolinguistics.

Course Outcomes

- Understand the relationship between language use and society with respect to regional, social, ethnic and contextual variation.
- Conduct research into a wide range of sociolingusitic variation
- Impart knowledge of sociolinguistics and related research in presentations and papers

5. Complete 15 credit hours (to a 200-level or higher) of university-level course work (or the equivalent) in a single foreign language (American Sign Language also qualifies). Students intending to pursue graduate studies in linguistics are strongly encouraged to study a non-Indo-European language. Non-native speakers of English may elect to use English to fill this requirement. They may choose to earn the credit by special examination or by taking classes (ESL 301, 302, 303, 304, and 305).

6. Complete three courses from the following electives:

ELANG 326 : English Semantics and Pragmatics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ELANG 223; or LING 201

DESCRIPTION: Structure of meaning in words, phrases, and discourse. Lexical semantics and the mental lexicon; phrase-level meaning; interaction of situation and meaning.

Course Outcomes

- Students will be able to identify and discuss basic semantic and pragmatic concepts such as sense, reference, deixis, perlocution, illocution, entailment, implicature, metaphor, Gricean Maxims, etc.
- Students will be able to apply the above concepts towards the analysis of spoken and written texts, demonstrating their knowledge and understanding in a written paper.

ELANG 362 : Discourse Analysis. (3:3:0)

PREREQUISITE: ELANG 223; or LING 201

DESCRIPTION: Linguistic analysis of connected speech or written discourse, especially larger linguistic units above the clause level, such as conversational exchanges or written texts.

Course Outcomes

- Students will be able to demonstrate knowledge of the ways that discourse is structured in a variety of genres and registers, including spoken conversational discourse and written academic discourse.
- Students will be able to identify and critically evaluate sources relevant to issues concerning discourse analysis.
- Students will be able to evaluate and appropriately apply various methods and approaches to the analysis of authentic English discourse and effectively communicate their findings.

LING 310 : Phonetics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: For Fall 2013 & forward admits, Ling 210.

DESCRIPTION: General inventory of speech sounds possible in language, from both an acoustic and articulatory point of view.

Course Outcomes

- Produce and transcribe approximately 100 of the sounds of the world's languages and describe the

articulatory and acoustic properties of these sounds.
- Transcribe and explain the phonetic processes common to languages of the world.
- Perform field work in phonetics—learning to record and acoustically analyze phonetics data.
- Recognize the phonetic systems of several languages and how and why the languages are organized the way they are.

LING 315 : Phonology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 210.

DESCRIPTION: Study of natural language sound systems from a variety of theoretical perspectives.

Course Outcomes
- Use a theoretical model to complete a phonological analysis at an intermediate level using appropriate methods and techniques,
- Present the results of phonological analyses, showing awareness of foundational issues in theories of phonology.

LING 320 : Morphology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 220.

DESCRIPTION: Theory and analysis of word structure in human language.

Course Outcomes
There are no course outcomes available

LING 325 : Theoretical Syntax. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: For Fall 2013 & forward admits, Ling 220.

DESCRIPTION: Theoretical comparison and contrast of different sentence types. Methods of argument to develop and critique generative theories of lexical categories, grammatical roles, and syntactic structure.

Course Outcomes
- Recognize and classify different types of constituents, including phrases and sentences.
- Understand and apply a theoretical framework and analytical techniques to determine and describe constituents.
- In writing and speaking, argue for (or against) particular theory dependent interpretations of structure, and support the argument with empirical evidence.
- Apply these outcomes to English and investigate their relevance to other languages.

LING 440 : Linguistic Tools 2. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 240.

DESCRIPTION: Linguistic research tools and methods; resources, literature, and synthesis of techniques.

Course Outcomes
There are no course outcomes available

LING 450 : Introduction to Historical-Comparative Linguistics. (3:3:0)

WHEN TAUGHT: Winter; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 210 and Ling 220.

DESCRIPTION: Theory and method of language change via comparison of daughter languages and reconstruction of their ancestral language: phonological, morphological, semantic, and lexical.

Course Outcomes
- Students will be able to apply the comparative method and internal reconstruction in order to hypothesize earlier states of a language and to examine the relatedness of different languages.
- Students will be able to explain how and why linguistic changes occur in phonology, morphology, syntax, semantics, and the lexicon.
- Students will be able to explain how linguistic change is affected by language contact and psychological, physical, social, and cultural factors.
- Students will be able to use corpora, texts, and lexicons in order to obtain data on, and answer questions about, language change.

LING 460 : Typology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 220.

DESCRIPTION: Introduction to the study of language universals and linguistic typology.

Course Outcomes
There are no course outcomes available

LING 480 : Problems in Translation. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: For Fall 2013 & forward admits, Ling 230 and proficiency in a second language.

DESCRIPTION: History, theory, and practice of human and machine translation.

Course Outcomes

- Discuss the possible future of translation technology, including future applications of existing technology and future development of new technologies, drawing on class assignments and a personal project.
- Create a bi-text corpus and derive translation memory and terminology from that bi-text corpus.
- Define a set of specifications for a translation project based on text type, audience, and purpose.
- Use machine translation, translation memory, and terminology in conjunction with a translation environment tool to complete a translation project according to the project's specifications.

LING 485 : Corpus Linguistics. (3:3:0)

PREREQUISITE: For Fall 2013 & forward admits, Ling 240.

DESCRIPTION: Using large collections of texts for teaching and particularly for research, including many types of linguistic variation

Course Outcomes

- Students will be able to understand how corpora and corpus-based materials can best be used for teaching and learning. They will carry out an in-depth investigation of one particular linguistic phenomenon using the best available corpora and corpus-based tools.
- Students will be able to apply the basic principles of corpus design and construction to design a corpus for their area of interest.
- Students will be able to understand the differences between corpus-based/empirical and rationalist/non-empirical approaches to linguistics.
- Students will be able to use text analysis tools to investigate frequency, keywords, and do simple concordancing.
- Students will be able to use corpora to carry out research in the areas of 1) lexicography 2) genre-based differences in language 3) syntax 4) semantics, and 5) historical change.

LING 545 : Psycholinguistics. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: For Fall 2013 & forward admits, Ling 210 or ELang 223; or equivalent.

DESCRIPTION: How the mind interprets, stores, retrieves, and produces language. Anatomical structures and physiological processes of the brain dealing with language.

Course Outcomes

- Discuss basic terminology, theories, and issues of psycholinguistics.
- Know the basic findings in each area of psycholinguistics (including comprehension, production, acquisition, and language disorders).
- Read and critically respond to psycholinguistic research and articles.
- Create and participate in psycholinguistic experimental research.

LING 550 : Sociolinguistics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: For Fall 2013 & forward admits, Ling 210 or ELang 223; or equivalent.

DESCRIPTION: Research and theory in anthropological linguistics and sociolinguistics.

Course Outcomes

- Understand the relationship between language use and society with respect to regional, social, ethnic and contextual variation.
- Conduct research into a wide range of sociolingusitic variation
- Impart knowledge of sociolinguistics and related research in presentations and papers

LING 551 : Anthropological Linguistics. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: For Fall 2013 & forward admits, Ling 220 and Ling 230; or equivalent.

DESCRIPTION: Language in culture and society: development, typology, and description.

Course Outcomes

- Upon completion of this course students will be equipped with the conceptual tools to think about and analyze linguistic data in social contexts of use.
- Student will become conversant with foundational texts which inform our cultural understanding and use of language.
- Through readings, weekly exercises and discussions they will acquire the metalinguistic concepts necessary for contextualizing varieties of language.
- In class transcription sessions will address the representation of linguistic data, and how that representation may affect one's assessments of semantic intent.

Any other courses such as internships, directed readings, and field project as presently constituted.

Note 1: Courses taken in requirements 3 and 4 cannot double count for requirement 6.

Note 2: Subject to approval by the Linguistics Area Coordinator, students may take up to two courses taught outside of the department to satisfy elective requirements.

7. Complete the following capstone course:

LING 495 : Senior Capstone. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 210 & Ling 220 & Ling 230.

DESCRIPTION: Integrative, culminating experience for linguistics majors; topics vary.

1. Complete the following:

DIGHT 230 : Introduction to Print Publishing. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Introduction to layout and typesetting and their place in the publications process; includes graphic design theory, audience analysis, and basic skills with professional desktop publishing application.

Course Outcomes
- Students will recognize the differences in purpose, audience, and style between various print publications.
- Students will situate typesetting and printing within the scope of the publishing process as a whole.
- Students will master the basic functions of Adobe InDesign for the purpose of typesetting various publications.
- Students will use a set of basic design principles (proximity, alignment, repetition, contrast) to improve the quality of their publications in InDesign.
- Students will be familiar with Adobe Photoshop and some of its uses in print publishing.
- Students will work effectively in groups to produce high quality printed material.

ELANG 223 : Introduction to the English Language. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Overview of English from linguistic point of view, emphasizing structure of English and social, biological, and psychological aspects of language.

Course Outcomes
- Students will have acquired basic analytical tools in core areas of linguistics: phonology, morphology, syntax, semantics, and pragmatics.
- Students will be able to apply these analytical tools to English language data of various types, such as those involving aspects of variation, acquisition, and historical change.

ELANG 322 : Modern American Usage. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: Ling 201, or concurrent enrollment.

DESCRIPTION: Current conventions and effective use of American English.

Course Outcomes
- Students will be able to identify and use multiple approaches to evaluating English usage.
- Students will be able to identify and use the most appropriate tools for each approach.
- Students will be able to evaluate the validity of prescriptive rules by using these approaches and tools.

ELANG 325 : The Grammar of English. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Ling 201, or concurrent enrollment.

DESCRIPTION: Study of English grammar in various applications.

Course Outcomes
- Students will be able to analyze and describe grammatical structures in English at the word, phrase, clause, and sentence levels.
- Students will be able to apply the knowledge from parts 1) and 2) towards the analysis of authentic texts.
- Students will be able to identify and label parts of speech in English sentences.

ELANG 350 : Basic Editing Skills. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: ELANG 223 & ELANG 322 & ELANG 325

DESCRIPTION: Editing theory and practice, emphasizing copy editing and basic line editing.

Course Outcomes

- Students demonstrate copy editing skills by using these skills to improve sample manuscripts in terms of punctuation, spelling, usage, and sentence clarity.
- Students apply style and usage requirements with flexibility, customized to specific contexts and circumstances.
- Students deploy empirical methods to investigate patterns of style and usage and make editorial decisions.

ELANG 410R : Genre and Substantive Editing. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: ELANG 223 & ELANG 322 & ELANG 325

DESCRIPTION: Exploring a different genre of publishing each semester; instruction in substantive editing.

Course Outcomes

- Students articulate a personal perspective on ethical issues in publishing, such as preserving the author's voice, plagiarism, copyright infringement, the tensions between the editorial and the marketing sides of publishing, the promotion of values and the transmission of our cultural heritage.
- Students demonstrate specialized skills and the perspective required by at least one specific editing genre (such as magazine publishing, technical communication, fiction, scholarly publishing, or visual information design).

2. Complete three hours of the following:

ELANG 430R : Editing for Publication. (1-3:ARR:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: ELANG 350 & ELANG 410R & DIGHT 230

DESCRIPTION: Refining copy editing and substantive editing skills through hands-on work with actual publications; one-on-one feedback and mentoring.

Course Outcomes

- Students demonstrate improvement in basic editing skills acquired in previous courses: copy editing, substantive genre editing, and use of electronic tools for editing and layout.
- Students demonstrate ability to work in small groups by producing as a group a publication project effectively edited and visually designed.
- Students demonstrate a basic understanding of the publication industry and the requirements of an effective job search by creating a job application and an editing skills portfolio.

BYU's Department of Linguistics and English Language offers a minor and a certificate in teaching English to speakers of other languages (TESOL). Students may earn a minor, or a certificate and a minor as completion of the minor occurs in the process of completing the certificate.

Note: For education majors, the TESOL K-12 minor is available to those earning a teaching major and leads to an ESL Endorsement. It is offered through the School of Education. For more information, contact the David O. McKay School of Education Advisement Center.

Career Opportunities

TESOL minor students are qualified for many overseas positions teaching English as a foreign language. They may also work in various ESL programs in the United States and other English-speaking countries. Possible teaching settings include adult education classes, intensive English programs, and English language learning programs around the world. Students in any major may apply for the TESOL minor.

Difference between the TESOL certificate and the TESOL minor

The TESOL minor will be indicated on a student's official transcript, whereas the TESOL certificate will not. Students should apply to the minor program by going to their college advisement center. Requirements will be tracked by the MyMap system and the student's progress report. If all requirements are met, the minor will be awarded at the time of graduation. Students who also want to complete the TESOL certificate must provide evidence to the Linguistics and English Language Department that requirements have been met. Once the certificate requirements have been met, the department will prepare and mail the certificate to the student.

Choosing whether or not to complete the certificate depends largely on the student's career goals. A TESOL certificate is a term that is recognized around the world. It is viewed as more applied and usable in the professional world. A certificate may be particularly useful if a student plans to teach abroad.

Students may choose to complete either a minor only or a minor and a certificate.

Program Requirements

1. Complete the prerequisite course:

ELANG 223 : Introduction to the English Language. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Overview of English from linguistic point of view, emphasizing structure of English and social, biological, and psychological aspects of language.

Course Outcomes
- Students will have acquired basic analytical tools in core areas of linguistics: phonology, morphology, syntax, semantics, and pragmatics.
- Students will be able to apply these analytical tools to English language data of various types, such as those involving aspects of variation, acquisition, and historical change.

2. Complete the following foundation courses:

ELANG 325 : The Grammar of English. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Ling 201, or concurrent enrollment.

DESCRIPTION: Study of English grammar in various applications.

Course Outcomes
- Students will be able to analyze and describe grammatical structures in English at the word, phrase, clause, and sentence levels.
- Students will be able to apply the knowledge from parts 1) and 2) towards the analysis of authentic texts.
- Students will be able to identify and label parts of speech in English sentences.

ELANG 375 : TESOL Listening, Speaking, and Pronunciation. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ELANG 223; or LING 201

DESCRIPTION: Understanding basic English as a second/foreign language theories and practices for teaching and assessing listening, speaking, and pronunciation.

Course Outcomes
- Analyze historical methods and techniques in English as a second/foreign language for teaching and assessing listening, speaking, and pronunciation.
- Analyze and adapt textbook materials designed to promote accuracy and fluency in listening, speaking, and pronunciation.
- Observe and analyze second language accuracy and fluency instruction in relation to concepts discussed in class.
- Identify the roles that langauge acquisition, learner variables, and language learning strategies play in teaching and assessing listening, speaking, and pronunciation.
- Evaluate technology aimed at promoting listening, speaking, and pronunciation.

ELANG 376 : TESOL Reading, Writing, and Vocabulary. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ELANG 223; or LING 201

DESCRIPTION: Understanding basic processes of literacy development in English as a second or foreign langauge. How knowledge of these processes informs classroom literacy instruction and practices.

Course Outcomes
- Analyze basic theories of second/foreign language literacy and vocabulary acquisition and assessment.
- Apply basic theories to actual classroom literacy and vocabulary instruction.
- Observe and analyze L2 literacy instruction in relation to concepts discussed in class.
- Identify and critique online resources aimed at literacy and vocabulary development.

3. Complete the following courses:

ELANG 477 : TESOL Basic Course and Lesson Planning. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: For Fall 2013 & forward admits, ELang 325 & ELang 375 & ELang 376.

DESCRIPTION: Design English as a second or foreign language course and lesson plans on principles and knowledge of learning outcomes, assessment plans, methods, materials, classroom management, and learning activities; access and use professional resources.

Course Outcomes
- Based on a needs assessment, students will be able to design an ESL course that includes learning outcomes, an assessment plan, a description of what will be taught, how it will be taught (including the roles for teacher and students), and major learning activities.
- Students will be able to develop an instructional unit using materials from a textbook that includes learning objectives, a unit plan, and sample lesson plans.
- Students will become more professional in TESOL by accessing and using resources including international, national, and local organizations; journals and online resources; job listings; and information about further educational opportunities.

ELANG 478 : TESOL Practicum. (3:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ELANG 325 & ELANG 375 & ELANG 376; ELang 223; and ELang 477 or concurrent enrollment.

DESCRIPTION: Synthesize and apply the foundational knowledge of the English language systems and competencies in teaching English as a second or foreign language.

Course Outcomes
- Students will put the knowledge and skills learned in the TESOL minor classes into use during the practicum at the English Language Center by:• Observing more experienced teachers in the classroom• Working with a mentor• Tutoring in the Self-Access Study Center• Assisting in the computer lab• Teaching in the Foundations Prep or Academic Prep classes• Completing a portfolio of work completed during the practicum

ELANG 351R : Editing Student Journals. (1-2:0:ARR)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Hands-on training and experience in all aspects of editing and publishing student journals.

Course Outcomes

- Students acquire practical experience in one or more phases of the production of a BYU student journal: manuscript solicitation, evaluation, development, copy editing, layout, production, and promotion.
- Students seek out opportunities to apply principles learned in editing classes to improve communication in live settings.
- Students articulate what they have learned about communication or publication processes in live settings that have enhanced their course learning.

ELANG 362 : Discourse Analysis. (3:3:0)

PREREQUISITE: ELANG 223; or LING 201

DESCRIPTION: Linguistic analysis of connected speech or written discourse, especially larger linguistic units above the clause level,

such as conversational exchanges or written texts.

Course Outcomes
- Students will be able to demonstrate knowledge of the ways that discourse is structured in a variety of genres and registers, including spoken conversational discourse and written academic discourse.
- Students will be able to identify and critically evaluate sources relevant to issues concerning discourse analysis.
- Students will be able to evaluate and appropriately apply various methods and approaches to the analysis of authentic English discourse and effectively communicate their findings.

ELANG 375 : TESOL Listening, Speaking, and Pronunciation. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ELANG 223; or LING 201

DESCRIPTION: Understanding basic English as a second/foreign language theories and practices for teaching and assessing listening, speaking, and pronunciation.

Course Outcomes
- Analyze historical methods and techniques in English as a second/foreign language for teaching and assessing listening, speaking, and pronunciation.
- Analyze and adapt textbook materials designed to promote accuracy and fluency in listening, speaking, and pronunciation.
- Observe and analyze second language accuracy and fluency instruction in relation to concepts discussed in class.

- Students articulate a personal perspective on ethical issues in publishing, such as preserving the author's voice, plagiarism, copyright infringement, the tensions between the editorial and the marketing sides of publishing, the promotion of values and the transmission of our cultural heritage.
- Students demonstrate specialized skills and the perspective required by at least one specific editing genre (such as magazine publishing, technical communication, fiction, scholarly publishing, or visual information design).

ELANG 421R : Studies in Language or Editing. (3:3:0)

DESCRIPTION: Topics vary.

Course Outcomes
- Students will be able to use information-design theory to improve their critiques of text features and to create new text design which is improved in both practical and ethical terms.
- Students will be able to use traditional editing rules to evaluate texts and revise text (format and information structure).
- Students will be able to explain how information-design theory can reconcile tensions between traditional editing rules that may come into conflict.

ELANG 430R : Editing for Publication. (1-3:ARR:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: ELANG 350 & ELANG 410R & DIGHT 230

DESCRIPTION: Refining copy editing and substantive editing skills through hands-on work with actual publications; one-on-one feedback and mentoring.

Course Outcomes

- Students demonstrate improvement in basic editing skills acquired in previous courses: copy editing, substantive genre editing, and use of electronic tools for editing and layout.
- Students demonstrate ability to work in small groups by producing as a group a publication project effectively edited and visually designed.
- Students demonstrate a basic understanding of the publication industry and the requirements of an effective job search by creating a job application and an editing skills portfolio.

ELANG 468 : Varieties of English. (3:3:0)

PREREQUISITE: ELANG 223; or LING 201

DESCRIPTION: Regional and social variation in English, especially standard and nonstandard national and world Englishes such as English-based pidgins and creoles.

Course Outcomes

- Students will learn the basic properties of several varieties of English.
- Students will be able to understand the basic terminology as well as the theoretical and social issues associated with studying varieties of English.
- Students will learn to collect and analyze data using several data collection methods.
- Students will collect and analyze data on a topic of their choice and present their findings in a research paper.

ELANG 477 : TESOL Basic Course and Lesson Planning. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: For Fall 2013 & forward admits, ELang 325 & ELang 375 & ELang 376.

DESCRIPTION: Design English as a second or foreign language course and lesson plans on principles and knowledge of learning outcomes, assessment plans, methods, materials, classroom management, and learning activities; access and use professional resources.

Course Outcomes

- Based on a needs assessment, students will be able to design an ESL course that includes learning outcomes, an assessment plan, a description of what will be taught, how it will be taught (including the roles for teacher and students), and major learning activities.
- Students will be able to develop an instructional unit using materials from a textbook that includes learning objectives, a unit plan, and sample lesson plans.
- Students will become more professional in TESOL by accessing and using resources including international, national, and local organizations; journals and online resources; job listings; and information about further educational opportunities.

ELANG 478 : TESOL Practicum. (3:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: ELANG 325 & ELANG 375 & ELANG 376; ELang 223; and ELang 477 or concurrent enrollment.

DESCRIPTION: Synthesize and apply the foundational knowledge of the English language systems and competencies in teaching English as a second or foreign language.

Course Outcomes

- Students will put the knowledge and skills learned in the TESOL minor classes into use during the practicum at the English Language Center by:• Observing more experienced teachers in the classroom• Working with a mentor• Tutoring in the Self-Access Study Center• Assisting in the computer lab• Teaching in the Foundations Prep or Academic Prep classes• Completing a portfolio of work completed during the practicum

ELANG 495R : The Senior Course. (3:3.0:0.0)

PREREQUISITE: Senior status; English language major status.

DESCRIPTION: In-depth study of a limited area of English language. Content varies; requires research and writing.

Course Outcomes

- Students will be able to identify some of the linguistic assumptions that underlie the approaches and methods they might use in completing the project.
- Students will be able to demonstrate how a variety of linguistic concepts, authoritative sources, and methodologies they have previously learned about in other courses may be effectively applied in a focused course project in which the students participate.
- By the end of the course, students will have written a substantial paper that describes, explains, and justifies the work they have done and the approach they have used in their project.

ELANG 496R : TESOL Internship. (.5-9:0:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: ELANG 477 & ELANG 478

DESCRIPTION: Individualized work or volunteer experience in a domestic or international setting.

NOTE: International internships must be coordinated through International Study Programs. All internships require prior departmental approval.

Course Outcomes

- Apply linguistic and pedagogical concepts learned in other TESOL minor courses in real-world situations.
- Develop feelings of confidence and preparedness in teaching English as a second language.

- Demonstrate critical reflection of their own teaching beliefs and practices.
- Become familiar with professional conduct, practice, and employment options in the TESOL industry.

500-Level Graduate Courses (available to advanced undergraduates)

ELANG 521R : Studies in Language. (3:3:0)

PREREQUISITE: ELANG 223; or LING 201; or equivalent.

DESCRIPTION: Topics vary.

Course Outcomes

- By the end of the course, students will have read extensively on a topic determined by the instructor.
- Students will be able to identify and outline some of the principal issues and contextual matters related to the designated topic area as well as to identify the principal sources and methods for resolving questions related to that topic area.
- By the end of the course, students will have prepared a substantial paper or project that demonstrates their mastery of material related to a specific issue or question within the topic area.

: English Spelling.

Course Outcomes

ELANG 522 : Language Policy and Planning in English Language Contexts. (3:3:0)

PREREQUISITE: ELANG 223; or LING 201; or equivalent.

DESCRIPTION: Theories and practices of governing entities as they formulate policies relating to the status and codification of the English language.

Course Outcomes

- Students will be able to apply fundamental language planning theories and practices toward solving real-world English language macro and micro planning problems.
- Students will be able to understand, interpret, explain, analyze, and assess representative texts and practices in English language planning and policy development.
- Students will be able to conduct research using appropriate language planning and policy theory and practice models in English language contexts.

ELANG 524 : History of the Book. (3:3:0)

DESCRIPTION: History and development of the book, including modern methods and practices.

Course Outcomes

- Students will be able to describe the history of the book and the reasons it has developed the way it has.
- Students will be able to describe and show how the book (the codex, in particular) is physically constructed and produced.
- Students will be able to describe the development of scripts and fonts and the reasons they have changed over time.
- Students will be able to describe what goes into making a book look beautiful (design, typography, construction, usefulness, etc.).
- Students will be able to describe the fundamentals that underlie how texts change and develop over time, including the kinds of transmission errors that occur.

ELANG 525 : Old English 1. (3:3:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: ELANG 324; or equivalent.

DESCRIPTION: Old English grammar and vocabulary; traditional syntactical patterns in various types of Old English prose and poetry.

Course Outcomes

- Students will be able to read Old English texts with the aid of a glossary and grammar and how to contextualize the content of the texts with Anglo-Saxon culture.
- Students will have learned the basic grammatical and syntactic structures of Old English.
- Students will be able to describe the differences between Old English and Present-day English and note the changes that occurred between the two stages of English.
- Students will be able to describe the major dialects and genres of Old English writings.

ELANG 526 : Middle English. (3:3:0)

WHEN TAUGHT: Fall Even Yrs.

PREREQUISITE: ELANG 324; or equivalent.

DESCRIPTION: Detailed study of the principal dialects of Middle English, as illustrated in the literature of the period.

Course Outcomes

- Students will be able to identify some of the most important ways that Middle English differs from Present-day English and Old English and tell how the language is in the process of changing in Middle English.
- Students will be able to read a Middle English text, with a little help from a glossary or dictionary.
- Students will be able to identify the major dialect differences in Middle English.
- Students will be able to explain concepts of language contact and sociolinguistics as exemplified by Middle English.

ELANG 527 : Early Modern English. (3:3:0)

WHEN Winter

TAUGHT:

PREREQUISITE: ELANG 324; or equivalent.

DESCRIPTION: English language from about 1500 to 1800, with special emphasis on language of Shakespeare and the King James Bible.

Course Outcomes

- Students will be able to identify the phonological, morphological, syntactic, lexical, pragmatic, and orthographic characteristics of Early Modern English and how those characteristics are distinguished from Present Day English.
- Students will be able to identify important historical, social, and linguistic factors that influenced the development of the language during the Early Modern Period, including the development of modern prescriptive norms.
- Students will be able to apply their understanding of Early Modern English to the interpretation of contemporary texts, including passages from the works of Shakespeare and the King James translation of the Bible.

ELANG 528 : Varieties of English. (3:3:0)

PREREQUISITE: ELang 223, 324; or equivalents.

DESCRIPTION: Regional and social variation in English, especially standard and nonstandard national and world Englishes, including English-based pidgins and creoles.

Course Outcomes

There are no course outcomes available

ELANG 529 : Structure of Modern English. (3:3:0)

WHEN TAUGHT: Spring Contact Department

PREREQUISITE: ELANG 325; or instructor's consent.

DESCRIPTION: English syntax through modern grammars; theories underlying those grammars.

Course Outcomes

- Students will be able to identify the various characteristics, features, and behaviors of the lexical and structural classes, as well as the larger phrase, clause, and sentence types within the English language.
- Students will be abel to identify some of the important reference works and resources that are available to answer questions about English grammatical structure and how they might appropriately be applied.
- Students will be able to demonstrate how grammatical knowledge can be consciously applied in a variety of analytical and applied language tasks.

ELANG 535 : Language and Literature. (3:3:0)

WHEN TAUGHT: Spring Contact Department

PREREQUISITE: ELANG 223; or LING 201; or equivalent.

DESCRIPTION: Literature from a language perspective; applying linguistic constructs to literary language; examining literary style; linguistic analysis of unfamiliar texts.

Course Outcomes

- Students will have become acquainted with important philological principles.
- Students will be able to analyze literary texts using poetic formulas, including simple and complex figures.
- Students will be able to analyze literary texts using philological criticism, including contextual relations.
- Students will understand how an online corpus might be used effectively to analyze literary texts.
- Students will be able to create literary texts using language features identified within the course.

ELANG 548 : Old English 2. (3:3:0)

PREREQUISITE: ELANG 525

DESCRIPTION: Additional reading in Old English, emphasizing sound changes, dialects, and textual production.

Course Outcomes

- By the end of the course students will have achieved a greater fluency within the Old English language.
- Students will have translated the entire epic poem, Beowulf.
- Students will be able to identify the features in Beowulf that exemplify the conventions of Old English heroic verse and the larger cultural context of the heroic society.
- Students will be able to provide examples of contrasting Old English lexical uses, including ones involving metaphor and synonymy among words within the poem as well as differences between the lexical forms in the poem and other Old English texts.

Undergraduate Courses

100-Level Courses

LING 110 : Introduction to Human Language. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Introduces students to the basic principles of language. The course considers language as part of our human, biological heritage, as wel as critical for our social and intellectual development.

Course Outcomes
There are no course outcomes available

200-Level Courses

LING 201 : Introduction to Linguistics (Modern). (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Basic understanding of linguistic systems. Phonology, morphology, syntax, semantics, and pragmatics.

Course Outcomes
- Be familiar with some of the major subfields of linguistics and the main topics of interest within each subfield.
- Demonstrate understanding of phonological, morphological, and syntactic structure.
- Master techniques of basic phonological, morphological, syntactic, and historical analysis.

LING 210 : Sounds of Language. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 201.

DESCRIPTION: Introduction to the description and analysis of speech sounds.

Course Outcomes
- Transcribe and give articulatory descriptions for common speech sounds of the world's languages, including those of English
- Explain common phonetic processes.
- Complete basic phonological analyses using knowledge ofthe phonemic principlethe content and organization of phonological featuresthe elements of prosody (syllable, stress, etc)

LING 220 : Structure in Language. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 201.

DESCRIPTION: Introduction to the analysis of word and sentence structure.

Course Outcomes
- Complete basic syntactic analyses using knowledge ofparts of speechconstituent structuregrammatical relations
- Complete basic morphological analyses using knowledge ofbasic word formation processesthe distinction between inflection and derivation and common inflectional categoriesproperties of the interfaces of morphology with phonology and syntax
- Describe the results of analyses using appropriate terminology and formalisms.

LING 230 : Meaning in Language. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 201.

DESCRIPTION: Introduction to the analysis of meaning in words, grammar, and discourse.

Course Outcomes
- Conduct semantic and pragmatic analyses and explications of natural human language at the lexical, grammatical, discourse and metaphorical levels applying a variety of semantic and pragmatic analytical procedures
- Critique contemporary approaches to semantic and pragmatic analyses by becoming familiar with semantic and pragmatic theories.

- Argue for a particular semantic or pragmatic explication through producing papers and project reports.

LING 240 : Linguistic Tools 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 201.

DESCRIPTION: Introduction to quantitative and qualitative research methods in linguistics.

Course Outcomes

- Be able to formulate testable hypotheses concerning language.
- Be able to collect linguistic data using interviews, surveys, experiments, corpora, etc
- Be able to use appropriate tools to analyze linguistic data.
- Be able to describe the results of linguistic research using appropriate terminology and rhetorical strategies (i.e., talk and write like a linguist).

LING 299R : Academic Internship: English Language Teaching. (1-9:0:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: LING 377R

DESCRIPTION: Students with focused training teach specific English skills to speakers of other languages in the U.S. or abroad.

Course Outcomes

- Provide service to English language learners in various, real-world settings
- Apply linguistic and pedagogical concepts learned in TESOL basic training coursework in real world situations.
- Develop feelings of confidence and satisfaction from experience teaching English as a second language.

300-Level Courses

LING 310 : Phonetics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: For Fall 2013 & forward admits, Ling 210.

DESCRIPTION: General inventory of speech sounds possible in language, from both an acoustic and articulatory point of view.

Course Outcomes

- Produce and transcribe approximately 100 of the sounds of the world's languages and describe the articulatory and acoustic properties of these sounds.
- Transcribe and explain the phonetic processes common to languages of the world.
- Perform field work in phonetics—learning to record and acoustically analyze phonetics data.
- Recognize the phonetic systems of several languages and how and why the languages are organized the way they are.

LING 315 : Phonology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 210.

DESCRIPTION: Study of natural language sound systems from a variety of theoretical perspectives.

Course Outcomes

- Use a theoretical model to complete a phonological analysis at an intermediate level using appropriate methods and techniques,
- Present the results of phonological analyses, showing awareness of foundational issues in theories of phonology.

LING 320 : Morphology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 220.

DESCRIPTION: Theory and analysis of word structure in human language.

Course Outcomes

There are no course outcomes available

LING 325 : Theoretical Syntax. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: For Fall 2013 & forward admits, Ling 220.

DESCRIPTION: Theoretical comparison and contrast of different sentence types. Methods of argument to develop and critique generative theories of lexical categories, grammatical roles, and syntactic structure.

Course Outcomes

- Recognize and classify different types of constituents, including phrases and sentences.
- Understand and apply a theoretical framework and analytical techniques to determine and describe constituents.
- In writing and speaking, argue for (or against) particular theory dependent interpretations of structure, and support the argument with empirical evidence.
- Apply these outcomes to English and investigate their relevance to other languages.

LING 377R : Basic Training in TESOL. (1-3:ARR:ARR)

WHEN TAUGHT: Contact Department.

PREREQUISITE: Planned participation in IAS- or U.S.-based English teaching experience.

DESCRIPTION: Basic preparation to teach English to speakers of other languages in particular settings.

NOTE: Especially for international service volunteers who plan to teach ESL or EFL.

Course Outcomes
There are no course outcomes available

LING 399R : Academic Internship: Linguistics. (.5-9:0:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Program coordinator's consent.

DESCRIPTION: On-the-job experience and education related to linguistics.

Course Outcomes
- Students will learn to apply concepts learned in their academic classes to everyday, practical, linguistic situations outside the university.
- Interns' real-world work experiences will enhance and enrich their understanding of academic concepts they learned in university classes.

400-Level Courses

LING 427 : Phonology and Morphology. (3:3.0:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: LING 201; or ELANG 223

DESCRIPTION: Introduction to phonology and morphology in the world's languages emphasizing the analysis of English.

Course Outcomes
- Be able to complete a phonological analysis at an intermediate level by applying knowledge of:the phonemic principle,the content and organization of the system of phonological features,the elements of the prosodic organization of utterances.
- Be able to complete a morphological analysis at an intermediate level by applying knowledge of:basic word formation processes,the distinction between inflection and derivation and common inflectional categories,properties of the interfaces of morphology with phonology and syntax.
- Be able to describe facts about phonology and morphology and communicate the results of phonological and morphological analyses using appropriate terminology and formalisms.

LING 440 : Linguistic Tools 2. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 240.

DESCRIPTION: Linguistic research tools and methods; resources, literature, and synthesis of techniques.

Course Outcomes
There are no course outcomes available

LING 450 : Introduction to Historical-Comparative Linguistics. (3:3:0)

WHEN TAUGHT: Winter; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 210 and Ling 220.

DESCRIPTION: Theory and method of language change via comparison of daughter languages and reconstruction of their ancestral language: phonological, morphological, semantic, and lexical.

Course Outcomes
- Students will be able to apply the comparative method and internal reconstruction in order to hypothesize earlier states of a language and to examine the relatedness of different languages.
- Students will be able to explain how and why linguistic changes occur in phonology, morphology, syntax, semantics, and the lexicon.
- Students will be able to explain how linguistic change is affected by language contact and psychological, physical, social, and cultural factors.
- Students will be able to use corpora, texts, and lexicons in order to obtain data on, and answer questions about, language change.

LING 460 : Typology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: For Fall 2013 & forward admits, Ling 220.

DESCRIPTION: Introduction to the study of language universals and linguistic typology.

Course Outcomes
There are no course outcomes available

LING 478 : Language Teaching Methods: MTC. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Instructional methods and strategies for teaching second and foreign languages at the Missionary Training Center (MTC).

Course Outcomes
- Students who are teaching language classes at the Missionary Training Center will connect methodological theory learned in this class with real-world practice.

LING 480 : Problems in Translation. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: For Fall 2013 & forward admits, Ling 230 and proficiency in a second language.
DESCRIPTION: History, theory, and practice of human and machine translation.

Course Outcomes
- Discuss the possible future of translation technology, including future applications of existing technology and future development of new technologies, drawing on class assignments and a personal project.
- Create a bi-text corpus and derive translation memory and terminology from that bi-text corpus.
- Define a set of specifications for a translation project based on text type, audience, and purpose.
- Use machine translation, translation memory, and terminology in conjunction with a translation environment tool to complete a translation project according to the project's specifications.

LING 485 : Corpus Linguistics. (3:3:0)
PREREQUISITE: For Fall 2013 & forward admits, Ling 240.
DESCRIPTION: Using large collections of texts for teaching and particularly for research, including many types of linguistic variation

Course Outcomes
- Students will be able to understand how corpora and corpus-based materials can best be used for teaching and learning. They will carry out an in-depth investigation of one particular linguistic phenomenon using the best available corpora and corpus-based tools.
- Students will be able to apply the basic principles of corpus design and construction to design a corpus for their area of interest.
- Students will be able to understand the differences between corpus-based/empirical and rationalist/non-empirical approaches to linguistics.
- Students will be able to use text analysis tools to investigate frequency, keywords, and do simple concordancing.
- Students will be able to use corpora to carry out research in the areas of 1) lexicography 2) genre-based differences in language 3) syntax 4) semantics, and 5) historical change.

LING 490 : Senior Seminar. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: LING 201; or ELANG 223
RECOMMENDED: Ling 420, 427, 430, 450.
DESCRIPTION: Reading and discussing major issues in linguistics, writing a senior paper, and reviewing content of core courses.

Course Outcomes
- Discuss intelligently several current big issues in linguistics.
- Resolve the tension between two sides of a narrow [linguistic] issue.
- Relate the narrow issue in your senior thesis to at least one major issue in linguistics and to possible career paths.

LING 495 : Senior Capstone. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: For Fall 2013 & forward admits, Ling 210 & Ling 220 & Ling 230.
DESCRIPTION: Integrative, culminating experience for linguistics majors; topics vary.

Course Outcomes
There are no course outcomes available

500-Level Graduate Courses (available to advanced undergraduates)

LING 501 : Advanced Research and Writing Techniques for Second Language Writers. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: For graduate international ESL students.
DESCRIPTION: Non-native English speaking students will develop research and writing techniques necessary for graduate-level writing.

Course Outcomes
There are no course outcomes available

LING 545 : Psycholinguistics. (3:3:0)
WHEN TAUGHT: Fall
PREREQUISITE: For Fall 2013 & forward admits, Ling 210 or ELang 223; or equivalent.
DESCRIPTION: How the mind interprets, stores, retrieves, and produces language. Anatomical structures and physiological processes of the brain dealing with language.

Course Outcomes
- Discuss basic terminology, theories, and issues of psycholinguistics.
- Know the basic findings in each area of psycholinguistics (including comprehension, production, acquisition, and language disorders).
- Read and critically respond to psycholinguistic research and articles.
- Create and participate in psycholinguistic experimental research.

LING 550 : Sociolinguistics. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: For Fall 2013 & forward admits, Ling 210 or ELang 223; or equivalent.

DESCRIPTION: Research and theory in anthropological linguistics and sociolinguistics.

Course Outcomes
- Understand the relationship between language use and society with respect to regional, social, ethnic and contextual variation.
- Conduct research into a wide range of sociolingusitic variation
- Impart knowledge of sociolinguistics and related research in presentations and papers

LING 551 : Anthropological Linguistics. (3:3:0)

WHEN TAUGHT: Contact Department.

PREREQUISITE: For Fall 2013 & forward admits, Ling 220 and Ling 230; or equivalent.

DESCRIPTION: Language in culture and society: development, typology, and description.

Course Outcomes
- Upon completion of this course students will be equipped with the conceptual tools to think about and analyze linguistic data in social contexts of use.
- Student will become conversant with foundational texts which inform our cultural understanding and use of language.
- Through readings, weekly exercises and discussions they will acquire the metalinguistic concepts necessary for contextualizing varieties of language.
- In class transcription sessions will address the representation of linguistic data, and how that representation may affect one's assessments of semantic intent.

LING 558 : Historical-Comparative Linguistics. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Ling 450 or equivalent.

DESCRIPTION: Learning theory and method of language change via comparing daughter languages and reconstructing ancestral languages. Language universals and typology.

Course Outcomes
- Students will learn how to apply typological concepts to specific languages during in-class and out of class exercises.
- Students will have achieved an understanding of the most influential concepts of Linguistics typology, including the different kinds of universals (formal, substantive, implicational, syntactic, lexical, morphological).
- Students will become conversant with the arguments against language universals.

LING 580R : Problems in Linguistics and Applied Linguistics. (1-3:3:0)

WHEN TAUGHT: Contact Department.

DESCRIPTION: Advanced research in language acquisition, sociolinguistics, psycholinguistics, linguistics field study, applied linguistics.

Course Outcomes
- Each section of Ling 580R could have different learning outcomes from other sections and other semesters. Therefore, each instance of Ling 580R must be evaluated separately.

LING 581 : Natural Language Processing. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: Good programming skills in at least one language (preferably LISP, Prolog, C, C++, Perl, or Java) and a knowledge of basic discrete math. Upper-division linguistics/computers and the humanities students with less programming experience may enroll with instructor`s consent.

DESCRIPTION: Intensive overview of natural language processing, including computational techniques, hands-on experience with linguistic technologies and corpora, language modeling approaches, and readings from current research.

Course Outcomes
- Students will be able to demonstrate by hands-on experience how to use NLP tools in the performance of linguistically interesting tasks.
- Students will be able to recognize and describe how computational techniques are used successfully in various areas of natural language processing.
- Students will be able to demonstrate application of a novel, nonontrivial programming approach to solving some aspect of NLP-related computation.
- Students will read, understand, discuss, and assess current research literature and trends in the relevant areas.

LING 590R : Readings in Linguistics. (1-3:ARR:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Instructor's consent.

DESCRIPTION: Individual study of current linguistic literature. Occasional discussion sessions with instructor and other class members.

NOTE: Pass/fail grade only.

Course Outcomes
- Individual advanced students will study and report on assigned readings under the direction of a professor
- Advanced students will study and complete individual projects under the direction of a professor

LING 599R : Academic Internship: Linguistics. (1-9:9:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: On-the-job experience under faculty supervision, with department approval.

Course Outcomes

- Students will learn to apply concepts learned in their academic classes to everyday, practical, linguistic situations outside the university.
- Interns' real-world work experiences will enhance and enrich their understanding of academic concepts they learned in university classes.

200-Level Courses

LINGC 200 : Basic Humanities Computing Skills. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Word processing experience.

DESCRIPTION: Software applications for computer-based instruction, academic publishing, and research; introduction to programming new applications.

Course Outcomes
- Understand the basics of text markup formats, including XML.
- Be able to obtain processable text files using various methods, including OCR, Web page extraction, and speech recognition.
- Understand the basics of representing language in text, including Unicode.
- Be able to perform text searches using various tools.
- Understand the kinds of language tasks performed by natural language processing.

LINGC 220 : Linguistic Computing Programming 1. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: LingC 200 or C S 100 or equivalent experience.

DESCRIPTION: Computer programming for language applications: data types, character representation, flow of control, file input/output, string manipulation.

Course Outcomes
- Understand what a computing algorithm is, as opposed to instructions intended for a human who as agency.
- Be able to manipulate digital information using algorithms written in a programming language. This includes an ability to understand and write assignment statements, loops, conditionals, and functions.
- Be able to manipulate digital information using algorithms written in a programming language. This includes an ability to understand and write assignment statements, loops, conditionals, and functions.
- Be able to create a simple graphical user interface for a software application.

LINGC 260 : (LingC-DigHT) Programming for Text Processing and Analysis. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: LingC 200 or C S 100 or equivalent experience.

Admission to Degree Program

All degree programs in the Department of Philosophy are open enrollment.

The Discipline

From its first appearance in ancient Greece down to the present, philosophy has sought to understand the world and the place of human beings within it. As it frames ideas by means of which to clarify and explain experience, philosophy discloses its faith in the ultimate lucidity of things. Philosophy's respect for the authority of intelligence fosters a preference for persuasion that is fundamental to personal growth and democratic society.

Students who study philosophy will find that it not only provides insight into life's fundamental concerns, it also helps them develop their capacity for clear thinking and perceptive judgment. Such competence will serve them well as they pursue further education or begin their careers.

Career Opportunities

Philosophy offers excellent career preparation, but not in the way that, say, accounting does. The value of a major in philosophy resides in the intellectual development it promotes. It lays a foundation on which more specialized study may build. In various standardized tests, philosophy majors tend to do extremely well on the verbal aptitude and on the analytic thinking sections. So philosophy can prepare a student for any type of work that requires highly developed reading and writing skills. Students who elect to major in philosophy should look beyond their bachelor's degree right from the start. For example, philosophy is an excellent background for the study of law or medicine. Those who intend to enter graduate school will need to start early on the foreign-language requirement.

General Information

The Department of Philosophy strongly recommends that StDev 317, a 2-credit-hour course, be taken at the end of the sophomore year or the beginning of the junior year. Because liberal arts degrees provide preparation in a variety of useful fields rather than a single career track, this course is recommended to help liberal arts students focus on specific educational and occupational goals and to identify the career options or educational opportunities available to them. The course will introduce them to the resources needed for accessing information about graduate schools, internships, careers, and career development. Students will learn basic employment strategies, including the steps necessary for obtaining employment related to their own specialty.

Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

PL SC 300 : Contemporary Political Theory. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring Contact Department; Summer Contact Department

PREREQUISITE: Pl Sc 201, 202; or Phil 201, 202.

DESCRIPTION: History of political science, including the moral and ethical dimensions of politics.

Course Outcomes

- Students will have a factual and theoretical knowledge of contemporary normative political theory from the standpoint of the question of the relationship between theory and practice.
- Students will attend to the deeper question of the nature and limits of theory (or "reason," or "philosophy") as it functions in the political-moral realm.
- Students will examine the risks both of a postmodern celebration of irrationalism and those inherent in the ongoing project of constructing a purely "rational" politics and morality.
- See the practical consequences of abstract philosophical ideas, think more deeply and coherently about their own moral and political commitments
- To learn to address significant, complex and challenging ideas in clear, correct, and strong English, based upon a careful engagement with textual sources

PL SC 307 : Reason, Revelation, and Politics. (3:3:0)

RECOMMENDED: Pl Sc 201 or 202 or a class in philosophy.

DESCRIPTION: The fruitful tension between the authority of reason and that of revelation in the Western tradition and in contemporary politics.

Course Outcomes

- Recognize and intelligently employ a number of terms of philosophical and political analysis.
- Understand the main ideas of each author considered, and be able to compare and contrast the various authors
- Summarize and independently critique important philosophical arguments bearing on religion and contemporary issues, and write about them in a clear and orderly fashion.
- Be critically aware of conventional assumptions regarding religion, reason and politics that limit much current thought
- See the practical consequences of abstract philosophical ideas, think more deeply and coherently about their own moral and political commitments

PL SC 309R : Topics in Political Philosophy. (3:3:0)

Admission to Degree Program

All degree programs in the Department of Spanish and Portuguese are open enrollment. However, special limitations apply for teaching and translation majors.

The Discipline

The Spanish and Portuguese languages and literatures dominate the Iberian Peninsula, major parts of Africa, and the southern portion of the New World from Mexico to the Magellan Straits. These languages, spoken by over 450 million people in twenty-one countries, provide a wide spectrum of cultural, linguistic, and literary variety. Spanish and Portuguese boast vibrant literatures that stand at the forefront of twentieth-century excellence and innovation, a linguist's paradise of dialects, rapid change, and development.

Such breadth—plus some 35 million speakers within the borders of the United States itself—gives multiple opportunities for developing skill in the spoken language, as well as in listening, reading, writing, and translation. Studying the Iberian roots of this large and important part of the population and learning about the people's perception of life also brings greater understanding of their values and their struggle for identity. A Spanish or Portuguese major makes for a demanding, intriguing, and pleasurable experience.

Career Opportunities

The field of teaching has always provided good employment opportunities for Spanish majors. In addition, opportunities for both Spanish and Portuguese have been found in government service (translation, U.S. State Department, CIA, FBI, Border Patrol, Peace Corps, NSA, USIA), business, social work, airlines, banking, etc. Many majors go on to professional schools (law, medicine, dentistry, business, etc.), where a liberal arts background is advised. For employment in fields other than teaching, a strong minor or a second major in the employment area is strongly encouraged. Teaching majors are required to complete a teaching minor.

General Information

The Department of Spanish and Portuguese strongly recommends that StDev 317, a 1-credit-hour course, be taken at the end of the sophomore year or the beginning of the junior year. Because liberal arts degrees provide preparation in a variety of useful fields rather than a single career track, this course is recommended to help liberal arts students focus on specific educational and occupational goals and to identify the career options or educational opportunities available to them. The course will introduce them to the resources needed for accessing information about graduate schools, internships, careers, and career development. Students will learn basic employment strategies, including the steps necessary for obtaining employment related to their own specialty.

Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

General Information

Spanish Resource Center

164 University Parkway Center, (801) 378-8107
E-mail: sp-rescenter@email.byu.edu

The Ministry of Education and Culture of Spain, in connection with the Department of Spanish and Portuguese and the Center for the Improvement of Teacher Education and Schooling (CITES), operates the Spanish Resource Center (Centro de Recursos). The purpose of the center is to provide an ample supply of books, computer programs, and didactic materials, both printed and audiovisual, related to the teaching of Spanish language and literature. Researchers, professors, students, educational institutions, coordinators, administrators, and in general all those who may be interested in the knowledge and promotion of Spanish are welcome. To increase the prestige of the Spanish language academically as well as socially, the Spanish Resource Center

- sponsors workshops, seminars, and work groups on topics related to teaching Spanish and researching linguistics and literature;
- organizes conferences, film series, recitals, and cultural activities in general that relate to the Spanish language and culture; and
- promotes and participates in all initiatives that are deemed appropriate and that favor acquisition and use of the Spanish language by students at different educational levels.

Foreign Language Student Residence

The Foreign Language Student Residence provides live-in opportunities for students in Spanish and Portuguese. A twenty-four-hour-a-day Spanish or Portuguese rule assures participants intensive use of the language, under the direction of native speakers. See the department secretary at 3190 JFSB or Foreign Language Housing at 3086 JFSB for information.

Language Skills Development

A program to improve and monitor all language skills at each level of course work has been developed by the department, and a final oral proficiency examination is required of all graduating seniors. Writing skills in Spanish or Portuguese courses will advance from writing exercises and short messages in 100-level courses to original short themes in 200-level classes. Papers in the language at the 300-level and more extensive research and vocabulary and full control of structures at the 400-level will complete the program.

Minor, Double Major, or Approved Supporting Course Work Required for Spanish or Portuguese Majors

All Spanish and Portuguese majors are required to complete either a minor (from any department in the university), 15 hours of approved supporting course work, or a double major.

Nonteaching majors who do not wish to complete a formal minor may substitute at least 15 hours of courses from among the following related fields: a second modern foreign language (upper-division courses only), Latin, Greek, English (beyond the GE requirement), linguistics, classical civilization, Latin American history or geography, Spanish/Portuguese history or geography, humanities, archaeology of Spain/Portugal or Latin America, comparative literature, or other areas approved by the department chair.

Nonteaching and nontranslation majors also may meet their minor requirement by completing 15 additional hours consisting of elective Spanish/Portuguese courses or (strongly recommended) a combination of Spanish/Portuguese electives and interdisciplinary work. In all cases these courses must form a coherent program and *must be preapproved* by the department chair.

A double major is an acceptable alternative to a minor.

Foreign Residency

The department strongly recommends that all majors participate in an extended (at least two continuous months) and intensive language and culture experience in a Spanish- or Portuguese-speaking country or area.

A student should complete this requirement by:

1. Residency abroad (may include a Spanish or Portuguese LDS mission, attendance at a foreign university, an advanced exchange program, or similar intensive foreign residence).
2. Participating in BYU Study Abroad Programs in Spain, Portugal, or Latin America.
3. Participating in individual or group-arranged internship programs abroad as approved by the department.

Students unable to participate in one of these programs must spend at least one year (two semesters) in the Foreign Language Student Residence, pledging to use only Spanish or Portuguese within the residence. Prerequisite to this experience is Span 205 or Port 201 or its equivalent; any exceptions must be approved by the department. For further information contact the department secretary or the Foreign Language Student Residence Office, 3086 JFSB, (801) 422-3765.

Program Requirements | View MAP | View Program Outcomes

1. The Spanish and Portuguese Department requires a minimum of 18 hours of upper-division major credit to be taken in residence at BYU for this degree program. These hours may also go toward BYU's 30-hour residency requirement for graduation.
2. Meet the foreign residency requirement.
3. Complete a minor (approximately 16–21 hours), second major (approximately 30–60 hours), or supporting course work (15 hours).

   Note: Latin American Studies majors or minors: Port 321, 339, 345 or 355, and 441 or 451 meet requirements for both the Portuguese major and the area studies minor. Only one of these courses may be double-counted (applied to both the major and the minor). Students wishing to complete a Portuguese major and one of these area studies minors must take an additional 6–9 hours chosen from the approved electives for either major or minor. Consult the department and the advisement center for clarification of the choices available to you.
4. Complete the following prerequisite courses:

PORT 101 : First-Year Portuguese. (4:5:1)

Discipline

The women's studies minor educates students in the findings, theories, and methodologies fundamental to the women's studies field, while fostering critical thinking and superior scholarship. Considering traditional academic discourse from the female perspective allows new insights into our historical and cultural traditions.

Career Opportunities

A women's studies minor enhances and broadens educational and employment opportunities in any discipline. The women's studies minor trains students to look at issues and questions from unique historical and contemporary perspectives both domestically and internationally. This training prepares students to be more successful in graduate and professional schools, business and industry, and government or community service.

SFL 461 : The Family and the Law. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: SFL 101 & STAT 121 & SFL 290; SFL 160 or concurrent enrollment.

DESCRIPTION: Legal environment of the family system, with emphasis on husband-wife and parent-child relationships, rights, and responsibilities.

Course Outcomes
- Critically analyze the historical and practical application of the law to your family.Critically analyze the profound implications that family law has on your relationships.Critically analyze the legitimacy of laws governing unnerving and sometimes painful issues.Be able to discuss sensitive issues different than your own in order to broaden your understanding as well as hone your ability to judge.Understand and synthesize issues addressed in class such as marriage, adoption, infertility, divorce, addiction, etc.

SFL 471 : Philosophies of Family Work and Relationships. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: SFL 101 & STAT 121 & SFL 290; SFL 160 or concurrent enrollment.

DESCRIPTION: Changes in household labor across time, current issues around gender and household labor, and philosophical perspectives of family work and family relationships.

Course Outcomes
- Understand and synthesize the historical evolution of family work and the roots of home management.Demonstrate knowledge of the core assumptions of current theoretical and research perspectives on family work.Analyze gendered perspectives on men's and women's “unique” contributions to family life.Communicate ideas clearly and engage in critical thinking as you write essays, take quizzes, and take exams.Critique and think more clearly about your own family work paradigms.

SOC 323 : Racial and Minority-Group Relations. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Social psychological and social structural analysis of racial and ethnic relations; prejudice, discrimination, responses, protests, current issues.

Course Outcomes
- Demonstrate how the continuing influence and changing meaning of ethnic heritage is bound up in contemporary western culture, both as experienced by others and in their own lives.
- Describe the role of childhood in the construction of moral adulthood, and identify the community consequences of connections and continuity in the life course, as opposed to alienation and boundedness.
- Identify sources of intellectual and personal balance and of communal and personal strength in dealing with problems of cultural identity and social diversity.
- Identify strengths and weaknesses in varying subcultures, including our own, to highlight sources of self deception, and to propose personal and community actions whereby our â woundsâ may be healed.
- Describe relationships between Americaâ s history of slavery, our own attitudes toward essential work and those who perform it, and existing racist and sexist attitudes.
- Offer proposals whereby the harmonizing of social opposites can be achieved.
- Understand the consequences, positive and negative, of ethnic contact and interaction on social creativity and problem solving, and to identify consequences of such contact in their own lives.
- Identify historical examples of positive and negative ethnic contact, in terms of social innovation and creativity, and apply them to contemporary situations
- Describe the complexities of social change and social engineering, cite historical examples in which efforts at social improvement generated unanticipated and sometimes counterproductive effects, and anticipate such effects in their own efforts at personal and social improvement.
- Clarify the differences between race and ethnicity, and the effects of so categorizing our fellow humans.
- Portray the â crisisâ contemporary civilizations face in terms of the age-old tension between settled and tribal peoples, and propose actions to ameliorate the negative effects of detribalization and the continuing increase in social diversity.
- Have a working understanding of the nature and limitations of prevailing worldviews, especially modernism and postmodernism, and their relation to social morality. Students understand the present-day significance of the Holocaust and other instances of genocide in terms of their lessons for humanity. They can identify the advantages and limits of reason and rationality, and understand that rationality and ethics may point in opposite directions, with potentially disastrous consequences for minorities.
- Demonstrate a basic familiarity with the ethnic structure of American society, how it is changing, and its implications for the future.

SOC 360 : Introduction to Family Sociology. (3:3:0)

WHEN TAUGHT: Fall

DESCRIPTION: Definitions of "family"; surveying the family as a context for sex, marriage, work, social reproduction, and violence in Western societies.

Course Outcomes

- Be able to critically assess the strengths and weaknesses of current sociological and demographic theories and research related to family sociology.
- Recognize how race, class, and gender intersect with family life and be familiar with the current literature on families and inequality.
- Be able to read current literature, synthesize main points across articles and develop an original thesis or argument in writing that is supported by the literature.
- Know the major controversies and debates, as well as demographic trends related to the family in the United States.
- Integrate current literature on family and determine family patterns for your personal future family.

SOC 367 : Sociology of Gender. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Gender in social institutions: family, social hierarchies, economics, education, organizations, religion, and science.

Course Outcomes

WS 351 : Early Modern European Women Writers. (3:3:0)

WHEN TAUGHT: Contact Department.

RECOMMENDED: WS 222.

DESCRIPTION: Readings in European literature by women prior to 1700.

Course Outcomes

- 1. Students will be able to read critically women-authored texts and analyze them within their cultural and literary contexts in Early Modern Europe.
- 2. Students will be able to recognize key female authors from this era, discern between literary genres and produce competent essays based on their critical engagement with course texts.
- 3. Students will be able to evaluate, recognize the diversity of and develop an appreciation for "the other voice" in Early Modern Europe.

WS 352 : Modern European Women Writers. (3:3.0:0)

WS 422 : Theories of Women's Studies. (3:3.0:0)
WHEN TAUGHT: Contact Department.
PREREQUISITE: WS 222 or instructor permission.
DESCRIPTION: Introduction to theoretical approaches to women's studies.

Course Outcomes
- 1. Students will be able to analyze and demonstrate a sound knowledge of a selection of primary documents related to historical and contemporary theories of women's studies.
- 2. Students will be able to produce substantive and competent term papers and projects focused on issues raised by women's studies theories.

4. Complete the following:
WS 492 : Women's Studies Capstone. (2:2.0:0)
WHEN TAUGHT: Winter
PREREQUISITE: WS 222 & WS 392R
DESCRIPTION: Synthesis of interdisciplinary studies of women; knowledge and skills necessary for advanced study or work in the field; mentored research and senior capstone project required.

Course Outcomes
- 1. Students will demonstrate their ability to read, write, and think analytically, and to carry out original research through their capstone projects.
- 2. Students will prepare materials to support their post-academic pursuits.
- 3. Students will be able to apply their knowledge and experience from interdisciplinary women's studies courses to their mentored research projects.
- 4. Students will be able to edit, refine, expand, and develop their research and communication skills with guidance from their faculty mentor.

WS 222 : (WS-Soc) Introduction to Women's Studies. (3:3:0)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: Survey of scholarship about women's lives; new historical, sociological, psychological, and literary approaches that inform our understanding of women's experience.

Course Outcomes

- 1. Students will be able to define and use the critical vocabulary basic to the field of women's studies.
- 2. Students will be able to recognize the ways in which social structures and issues (government, family, education, health-care institutions, the media, etc.) have affected and affect women's lives.
- 3. Students will begin to gain an appreciation of the contributions of women throughout history and internationally.
- 4. Students will be able to perform and present research related to women's studies in oral and written formats.
- 5. Students will begin to make informed choices about their own behavior, health, education, and employment decisions based on their understanding of the role gender plays in relationships and society.

WHEN TAUGHT: Fall; Winter

RECOMMENDED: WS 222.

DESCRIPTION: Scholarly findings presented by researchers on topics relating to women's lives and experiences throughout history, across the world, and within ethnic, educational, and economic segments of society.

Course Outcomes
- 1. Students will become aware of some of the latest research in the field of women's studies carried out here at BYU and at other national and international institutions.
- 2. Students will engage with the lectures and lecturers by developing questions about the research and responding to each lecture.
- 3. Students will be able to formally introduce a speaker at a public event, respond to presentation in that setting, and/or lead a question & answer session.
- 4. Students will be able to evaluate and write clearly about the ideas presented in lectures.

The J. Reuben Clark Law School offers a six-semester course of graduate professional study leading to the juris doctor (JD) degree. Information about legal education, admissions standards, and related matters can be obtained from the Law School Admissions Office or at www.law2.byu.edu/.

To be admitted to the Law School, an applicant must be a college graduate who has excelled academically and has scored in the upper range of the nationally administered Law School Admission Test. In addition, applicants must meet the general university admission requirements, including the personal standards required of all students.

Apply for admission online at www.lsac.org by February 1 preceding the fall of expected enrollment in the Law School. Enrollment takes place only in the fall of each year.

For more information regarding prelegal education, consult the Preprofessional Advisement Center (Law).

- Microbiology and Molecular Biology (MMBio)
- Nutrition, Dietetics, and Food Science (NDFS)
- Physiology and Developmental Biology (PDBio)
- Plant and Wildlife Sciences (PWS)

Courses offered in the life sciences give students a general understanding of the fundamental principles of life that extend from the tiniest microbes to plants, animals, and human beings. Students also obtain the knowledge, skills, and motivation necessary to maintain a healthy lifestyle. Specialized courses emphasizing teaching and research in various life science disciplines are also offered. Disciplines range from basic science to applied science.

The goal of the Life Sciences Student Services Center is to provide "one stop shopping for students and faculty." The center services students in five areas: advisement, assessment, career advisement, college life, and mentored experiences.

Advisement—Students are instructed in general education advisement as well as assistance in creating a graduation curriculum plan for their major. Advisement is regarded as an interactive, developmental experience between students and advisors. Among other advisement services are the change of major, academic success, and graduation processes, as well as other specific advisement needs. LfSc 101 is offered to all new students who are exploring Life Science majors. All majors and career options are presented in this course plus basic student development principles to assist new students in adapting to BYU and becoming familiar with its resources.

Assessment—Students are informed of the importance of maintaining the university's accreditation standing. Students assist the assessment process by providing input through surveys, exit interviews, one-year-out and five-year-out surveys, and results on national major field exams and other national and professional school admission exams.

Career advisement—Students are assisted in major exploration and basic developmental career issues. Information is provided regarding university resources for further career and major exploration.

College life—The "Empowering Others" philosophy encourages students to help and teach each other by creating a spirit of cooperation rather than competition. Study groups are fostered and organized to enhance learning. A learning facility provides tutoring services for students enrolled in the essential biology courses. This walk-in area allows a student access to tutors 10–12 hours per day. Leadership opportunities for students can be enhanced through participation on the Life Sciences Student Council and participation in clubs. The college also offers scholarship opportunites to its undergraduate and graduate students.

Mentored experiences—Internships provide students with opportunities to try out their prospective careers. The center provides resources for obtaining internships as well as processing all the paperwork and awarding grants to students who desire that experience. Assisting faculty with research constitutes a mentorship. Students learn invaluable skills and problem-solving techniques from their mentors. The center can help students seeking mentored experiences.

The Bean Life Science Museum is fully accredited with the American Association of Museums. Its vast teaching and research collections include more than two million arthropods, fish, amphibians, reptiles, mammals, birds, and mollusks, and more than 700,000 plants, fungi, and bryophytes. Specimens for these collections, which represent creative work by university faculty members and students, have been gathered from around the world, making the museum a major repository of scientific-quality, biological collections in the western United States.

The museum and its collections are utilized by university classes in biology, plant and wildlife sciences, education, art, geography, and other disciplines. The museum also maintains and manages the Lytle Ranch Preserve. Located in the northernmost extension of the Mojave Desert southwest of St. George, Utah, this 600-acre desert classroom is situated in a part of Utah that is unique not only for its plant and animal communities, but also for its setting at the crossroads of three major bioregions.

Public programs include temporary and permanent exhibits of natural communities that illustrate complex relationships between plants, animals, and their physical environment. Educational programs serve more than 100,000 annual visitors and provide classes and programs for public and private schools and many other organizations. Museum hours are Monday through Friday from 10:00 a.m. to 9:00 p.m. and Saturday from 10:00 a.m. to 5:00 p.m. The museum is closed on Sunday. Admission is free.

The Western North American Naturalist, a nationally recognized peer-reviewed natural history journal, is housed in the museum. Other museum publications include professional and popular works such as *A Utah Flora, Bark and Ambrosia Beetles of South America, Snakes of Utah*, and *Common Rocky Mountain Lichens*.

Admission to Degree Program

All degrees within this department are open enrollment programs.

The Discipline

Programs in the Department of Biology focus on training students in the organismal and broader perspectives of the biological sciences. Fields include systematics of taxonomic groups, ecology, and evolution, which often rely on the application of molecular biology and genetics.

Career Opportunities

Biology entails rigorous, broad training and synthetic reasoning, which prepare students for careers in a wide variety of professional fields ranging from technical work in research laboratories to field technicians for environmental research companies or government agencies. Majors may develop their interest in such diverse areas as environmental biology, evolutionary biology, aquatic biology, molecular biology, plant biology, or taxonomy. Students satisfy the requirements for graduate studies in the biological sciences or professional schools.

The bioinformatics major is for students with interests in both the computer and the biological sciences. The degree merges these interests in the areas of bioinformatics and computational biology, giving students the skills for graduate or professional (medical, dental, law) schools or immediate employment opportunities after completing the undergraduate program, especially with biotechnology companies.

The biological science education program provides a solid foundation in courses that meet the National Science Teachers Association certification requirements for secondary education biology teaching. The program also prepares students for continuing their education in graduate school.

Preveterinary medicine students interested in veterinary medicine are encouraged to incorporate required preveterinarycurriculum into an academic program of their choosing. See the description of the biology major for additional information.

Graduation Requirements

To receive a BYU bachelor's degree a student must complete, in addition to all requirements for a specific major, the following university requirements:

- The university core, consisting of requirements in general and religious education. (See University Core for details. For a complete listing of courses that meet university core requirements, see the current class schedule.)
- At least 30 credit hours must be earned in residence on the BYU campus in Provo as an admitted day student
- A minimum of 120 credit hours
- A cumulative GPA of at least 2.0
- Be in good standing with the Honor Code Office

Program Objectives

Bioinformatics is an interdisciplinary program offering substantial training in both the biological sciences and the physical and mathematical sciences, with an emphasis on computer programming coupled with genetics and molecular biology. Students are expected to acquire programming, databasing, and operating system skills coupled with a foundation in mathematics and statistics. In addition, students will receive broad training in the basic concepts of biology and chemistry. Students attracted to this program have dual interests in math/computer science and biology, and find it an exceptional option for their broad interests.

1. Complete the following:

BIO 130 : Biology. (4:3:1)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: General biology course with laboratory for biology majors. Introduction to disciplines in the life sciences including methods for scientific inquiry, biochemical dynamics, cell structure and function, evolutionary theory, bioenergetics, and ecological interactions.

Course Outcomes

- Students will demonstrate basic literacy in the language of science and an understanding of the foundational theories of biology (i.e., be able to formulate appropriate hypotheses and predictions to test specific biological phenomena and use appropriate vocabulary to do so) o Atomic Molecular Theoryo Cell Theoryo Theories of Photosynthesis, Fermentation, and Cellular Respirationo Cell Division and Meiotic Theorieso Chromosomal and Mendelian Theories of Inheritanceo Watson and Crick's Theory of DNA Structure and Replicationo Protein Synthesis Theoryo Darwin's Theory of Natural Selectiono Hardy-Weinberg Theoryo Ecosystem Theoryo Population Growth Theoryo Competitive Exclusion and Behavioral Theory
- Students will demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strengths and weaknesses of this process.
- Students willappreciate the excitement of discovery that has accompanied important scientific developments.
- Students will demonstrate how scientific methodology can be used to analyze real-world science-related problems.
- Students will be able to evaluate scientific data and claims in order to make rational decisions on public-policy science issues that affect their community.
- Students will be able to express their thoughts (in oral, graphical, and written formats) on scientific topics clearly, including appropriate use of basic scientific vocabulary and effective interpretation of quantitative data.
- Students will be able to reflect rationally upon the interface between science and religion.
- Students will demonstrate sound scientific reasoning ability.

BIO 165 : Introduction to Bioinformatics. (3:3:0)

WHEN TAUGHT: Winter

DESCRIPTION: Introduction to basic concepts in bioinformatics. Standard bioinformatic applications.

Course Outcomes

There are no course outcomes available

BIO 370 : Bioethics. (2:1:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Introductory biology course.

DESCRIPTION: In-depth lecture and small group discussion of varied bioethical issues. LDS Church positions emphasized when appropriate.

Course Outcomes

- Students will understand the ethical and philosophical underpinnings of bioethics and to develop ethical intuitions on bioethical issues.
- Students will learn the terminology, vocabulary, and objectives of bioethics.
- Students will understand the tools and approaches needed to make a bioethical decision and to communicate that decision in rationally informed ways.

- Students will understand the bioethical primary literature, to understand how to read case studies, and familiarity with the major issues being discussed in bioethics today.

BIO 420 : Evolutionary Biology. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MMBIO 240 & PWS 340
RECOMMENDED: Concurrent enrollment in Bio 421.
DESCRIPTION: Intensive examination of evolution as the conceptual cornerstone of biology.

Course Outcomes

- Students will be able to describe the history and development of evolutionary thought.
- Students will be able to list and describe the evidence for evolution and its required corollaries.
- Students will be able to describe the mechanisms by which evolution occurs. Provide detailed explanations of the the processes of evolution by mutation, migration, genetic drift, non-random mating, and natural selection.
- Students will be able to explain adaptation, providing examples from several different fields of biology (e.g., cell biology, physiology, conservation biology, bioinformatics, medicine, behavior, etc.).
- Students will be able to describe the history of life on earth. Identify major evolutionary transitions over time, and explain the tools and evidence that support current hypotheses of the history of life.

BIO 421 : Evolutionary Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: MMBIO 240
DESCRIPTION: Hands-on applications and analytical tools of evolutionary biology; emphasizing inference methodology and evidence complementing the theoretical constructs introduced in Bio 520, including comparative anatomy, phylogenetic inference, population genetics, species concepts, and human evolution.
NOTE: Concurrent enrollment with Bio 420 is strongly recommended.

Course Outcomes

- Students will gain a better understanding of the basic principles of evolution within a population including selection, drift, and founder effects by using computer simulations.
- Students will have a deeper understanding of the LDS position on evolution.
- Students will learn the details of phylogenetic reconstruction, tree searching, DNA sequence alignment, and other bioinformatics tools for deciphering patterns of evolution.
- Students will learn the details of species concepts and the criteria used for identifying and diagnosing species.
- Students will gain hands-on experience with hominid fossils and gain an understanding of the evidence that elucidates the biological history of humans.

BIO 465 : Bioinformatics and Proteomics. (3:2:1)

WHEN TAUGHT: Winter
PREREQUISITE: BIO 365
DESCRIPTION: 3-D protein structural comparisons, hidden Markov models for database comparisons, homology detection, multiple sequence analyses, and protein family comparisons. Exercises in computer programming in genomics.

Course Outcomes

- Students will learn and demonstrate mastery of advanced analytical bioinformatics techniques, including genome assembly, genome annotation, and protein analyses.
- Demonstrate ability to use and evaluate literature databases and primary literature directed to the bioinformatics community in terms of newly developed software, analytical algorithms, application to empirical data, etc.
- Apply and develop computational skills in secondary (i.e., helices, etc.) and tertiary (i.e., folding, etc.) prediction, and 3-dimensional (i.e., x-ray crystal structures, etc.) modeling of protein structures.
- Apply evolutionary concepts to modeling DNA/proteins to evaluate and/or predict function, utilizing 3D structures, physical and chemical amino acid properties, etc.
- Apply existing and develop new tools for genome assembly and annotation from next-generation DNA sequencing projects

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring
PREREQUISITE: PDBio 120 or MMBio 151 or Bio 130; Chem 105 or Chem 111.
DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

Course Outcomes

- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

PWS 340 : Genetics. (2:2:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481
DESCRIPTION: Genetic mechanisms, their fundamental nature, interactions, and applications to human affairs. Genetics in quantitative terms. Extensive practice in problem solving.

Course Outcomes
- Students can construct two- and three-point linkage maps.
- Students can display fluency in interpreting gene annotation and nomenclature in GenBank records.
- Students can demonstrate ability to analyze and apply Chi-square goodness-of-fit tests to complex geneticdata sets involving segregation and Hardy-Weinberg equilibrium models.
- Students can identify differences between extranuclear, autosomal and sex-linked inheritance patterns.
- Students can use genetic data (DNA or amino acid sequence) to reconstruct basic evolutionary phylogenies.
- Students can dissect quantitative traits into environmental and genetic variance components.

2. Complete one course from the following:

BIO 365 : Computational Biology. (3:2:1)
WHEN TAUGHT: Fall
PREREQUISITE: C S 240
DESCRIPTION: Computational analysis of DNA data; introduction to bioinformatics databasing using Perl and SQL; configuration of UNIX workstations for bioinformatics analyses.

Course Outcomes
- To provide practical experience in using computational approaches to address biological problems.
- Describe general areas of computational problems in biology (alignment, estimation, tree searches, molecular modeling, gene prediction) and learn about existing computational approaches to these general problems.
- Learn basic computational tools for statistical inference (Bayesian, Maximum likelihood, Markov Chain Monte Carlo, Hidden Markov Chain)
- Apply programming skills to alignment problems through the development of novel tools and software for alignment
- Apply programming skills to tree searching problems through the development of novel tools software
- Apply programming tools to gene prediction problems through the development of novel tools and software
- Develop ability to use existing and write new database code to access and manipulate genetic data

C S 418 : Bioinformatics. (3:3:0)
WHEN TAUGHT: Fall; Winter Contact Department; Spring Contact Department; Summer Contact Department
PREREQUISITE: C S 312
DESCRIPTION: Computational methods for analyzing biological systems. Dynamic programming, Markov models, Neural Networks, and Bayesian analysis are used to predict secondary structure, tertiary structure, and active sites for drug docking given molecular DNA sequence data.

Course Outcomes
- Graph Theoretical algorithms, Regulatory Inference
- Large Memory Genomic Mapping, SNP calling
- Develop new research ideas and communicate them effectively

3. Complete the following:

C S 142 : Introduction to Computer Programming. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Knowledge of algebra.
DESCRIPTION: Introduction to object-oriented program design and development. Principles of algorithm formulation and implementation.

Course Outcomes
- Use the rudiments of the environment and the resources available to help them program (editors, basic computer architecture, compilers, libraries, reference manuals, on-line help).Develop programs from an English description.Write programs on their own, independent of "hand holding" by a TA or an instructor (typically a dozen or so).Understand and use the basic programming constructs: types (built in types, basic provided types including arrays and strings, type construction), values (constants,variables, assignment statements, and expressions), control structures (sequential flow, conditional statements, and loops), and I/O (basic output to the screen and input from the keyboard, and file I/O).Understand and use objects (value representation, applicable operations, hidden implementations).Implement basic recursive algorithms.Describe and use the basic ideas of some of the more advanced programming constructs,including exceptions, inheritance, and polymorphism.
- AbstractionDebugging and Assurance of CorrectnessProgram Development (analysis, specification, design, implementation, testing)

C S 235 : Data Structures and Algorithms. (3:3:0)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: C S 142
DESCRIPTION: Fundamental data structures and algorithms of computer science; basic algorithm analysis; recursion; sorting and searching; lists, stacks, queues, trees, hashing; object-oriented data abstraction.

Course Outcomes
- Use the fundamental data types of computing (lists, stacks, queues, priority queues, sets, maps, trees, etc.).

- Understand the major techniques for implementing the fundamental data types (linked lists, binary search trees, hashing, heaps, etc.) and implement several of them.
- Properly use and select data structures from language-provided data-structure libraries.
- Apply basic algorithm analysis.
- Understand how recursion works and write programs using recursion to solve problems.
- Make informed decisions about which sorting and searching algorithms to use in specific circumstances.
- Write programs that require ~500 lines of code.

C S 236 : Discrete Structures. (3:3:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: C S 235

DESCRIPTION: Introduction to grammars and parsing; predicate and propositional logic; proof techniques; sets, functions, relations, relational data model; graphs and graph algorithms.

Course Outcomes

- Understand and be conversant with basic discrete mathematical structures (finite state machines, regular expressions, grammars, propositional calculus, proof techniques, predicate calculus, sets, relations, functions, graphs).Write complex programs by using mathematical concepts as the basis for solving programming problems (finite state machines for lexical analysis; grammars for parsing; propositional and predicate calculus for logic programming; sets and algebras for relational databases; algebras, graphs, and topological sorting for optimizing datalog query processing).Incrementally build sophisticated programs by a systematic design process based on discrete mathematics.Design a solution for a programming problem and justify the design as one that is maintainable and extendable by other programmers who understand and are conversant with discrete mathematical structures.
- Demonstrate ability to build large programs by writing and integrating code from a diverse spectrum of program components.

C S 240 : Advanced Programming Concepts. (4:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: C S 236

DESCRIPTION: Advanced software development with an object-oriented focus. Development and testing of several 1500 to 2000 line modules from formal specifications. UNIX and C++ environment.

Course Outcomes

- a. Use coding, testing, and debugging strategies. b. Follow basic object-oriented design concepts.
- Write programs in an Object Oriented programming language using inheritance, polymorphism and class hierarchies.
- Use the Linux programming environment to execute basic commands and to run the compiler, linker, debugger, memory checker, and profiler.
- Demonstrate the aptitude and work ethic necessary to succeed in computer science.

C S 360 : Internet Programming. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 240

DESCRIPTION: Internet application programming, including sockets, threads, CGI, database, e-commerce, Web services.

Course Outcomes

- Design and implement a variety of client-server and web applications.
- Analyze the performance of a web server, write convincingly to support your conclusions and give an oral report to describe your findings.
- Implement a web server using processes, semaphores, threads, sockets and signals.
- Use a set of web programming languages to implement an application.
- Use security to protect their web application.

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 106 : General College Chemistry. (3:4:0)

WHEN TAUGHT: Fall; Winter; Summer

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Continuation of Chem 105 but covering most of the topics in a more quantitative way. Detailed treatment of thermodynamics and equilibria.

NOTE: Three lectures and one recitation section per week.

Course Outcomes

- Students will demonstrate an expanded mastery of the concepts that were learned in Chemistry 105 including: kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, thermodynamics, organic, biochemistry, and nuclear chemistry.
- Students will demonstrate the ability to solve mathematical problems, typically using algebra, in kinetics, chemical equilibrium, acids and bases, solubility and complexation equilibrium, electrochemistry, and thermodynamics.

MATH 112 : Calculus 1. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Differential and integral calculus: limits; continuity; the derivative and applications; extrema; the definite integral; fundamental theorem of calculus; L'Hopital's rule.

Course Outcomes

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 1 develops the concepts of limit, derivative, and integral, and is fundamental for many fields of mathematics. This course contributes to all the expected learning outcomes of the Mathematics BS. For more detailed information, visit the Math 112 Wiki page.

: Honors Calculus 1.

Course Outcomes

MATH 113 : Calculus 2. (4:5:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

DESCRIPTION: Techniques and applications of integration; sequences, series, convergence tests, power series; parametric equations; polar coordinates.

Course Outcomes

- This course is designed for students majoring in the mathematical and physical sciences, engineering, or mathematics education and for students minoring in mathematics or mathematics education. Calculus is the foundation for most of the mathematics studied at the university level. The mastery of calculus requires well-developed skills, clear conceptual understanding, and the ability to model phenomena in a variety of settings. Calculus 2 develops techniques of integration, applications of integration, infinite sequences and series, parametric curves, polar coordinates, and conic sections. This course contributes to all the expected learning outcomes of the Mathematics BS. For a more detailed course description, visit the Math 113 Wiki page.

4. Complete the following:

STAT 151 : Introduction to Bayesian Statistics. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: MATH 112

RECOMMENDED: Concurrent enrollment in MATH 113.

DESCRIPTION: The scientific method; conditional probability; Bayes' Theorem; conjugate distributions: Beta-binomial, Poisson-gamma, normal-normal; Gibbs sampling.

Course Outcomes

- Explain how conditional probability and Bayes' Theorem relate to the analysis of data via the Bayesian paradigm
- Identify the conjugate priors of the normal (mean and variance), binomial, and Poisson distributions and derive the respective posterior distributions
- Explain why Gibbs and Metropolis samplers work and when they are appropriate to use
- Code in R a Gibbs sampler and/or Metropolis sampler for a simple non-conjugate posterior distributions
- Interpret and explain the results of Bayesian analysis

STAT 201 : Statistics for Engineers and Scientists. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MATH 112; or MATH 119

DESCRIPTION: The scientific method; probability, random variables, common discrete and continuous random variables, central limit theorem; confidence intervals and hypothesis testing; completely randomized experiments; factorial experiments.

Course Outcomes

- Compute numerial and graphics summary statistics and explain the difference between populations given the summaries (numerical or graphical)

- Apply fundamentals of set theory and basic set operations to simple problems
- Distinguish between counting techniques (permutations, combinations) and compute the number of possible combinations for simple problems
- Solve simple problems using axioms of probability, conditional probability, independence, and Bayes' theorem
- Compute probabilities, expected values, and variances using the PDF of a discrete and a continuous univariate random variable
- Understand the definition of a sampling distribution, identify the mean, variance, and shape of the sampling distribution given the population information, and explain the application and importance of the Central Limit Theorem
- Understand the basics of experimental design, including the definition of the experimental unit, response, variable, factor(s), and level(s) of a basic experiment, and the role of randomization and replication to permit causal inference
- Compute the confidence interval for μ from a random sample and make the correct decision about an experiment when given a confidence interval
- Compute the test statistic and p-value for H0 : μ = μ0 from a random sample
- Make the correct decision when given the p-value for a hypothesis test and compute the ANOVA table for the data from a completely randomized design
- Compute pairwise confidence intervals on the difference in means (Fisher, Bonferroni) to understand a significant overall F-test from a completely randomized design
- Compute the ANOVA table for data from a two factor experiment
- Explain a statistically significant interaction
- Perform a two factor (or 2^3) experiment (in a group), compute the ANOVA table from the observed data, and write a technical report of the results of the experiment with appropriate graphics of significant effects or interactions

5. Complete six credit hours from the following upper-division electives in computer science, chemistry, mathematics, statistics, or biology:

BIO 450 : Conservation Biology. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 220A & BIO 350; or BIO 220B & BIO 350

DESCRIPTION: Scientific principles of conservation: applying population genetics, and phylogenetic and ecological theory to preservation of biological diversity; developing sustainable ecological systems compatible with human resource use.

Course Outcomes
- Apply an understanding of ecological processes to conservation of populations, species, and ecosystems.
- Foster and promote environmental stewardship within your realm of influence and your community.
- Demonstrate the ability to apply the scientific method and analytical thinking to ecological and conservation issues.
- Demonstrate the ability to synthesize literature relevant to a topic in conservation bioloigy
- Demonstrate the ability to write a scientific term paper

BIO 463 : Genetics of Human Disease. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PWS 340

DESCRIPTION: Examining the application of genetics to understanding and treatment of human disease. Functional consequences of mutations; use of model organisms; linkage and association analysis of complex traits; pharmacogenetics; ethical considerations.

Course Outcomes
- Understand and explain the different types of genetic variants, how they can be typed and how they can be used to understand the genetic architecture of human disease.
- Understand linkage disequilibrium in the human genome and the role it plays in the search for genetic risk factors for human disease
- Understand and use basic statistics and software for analyzing the correlation between genetic markers and risk for disease.
- Understand and explain how model organisms contribute to our understanding of the genetics of human disease.
- Demonstrate the ability to obtain, aggregate and present information about the current knowledge of the genetics of a human disease.

BIO 468 : (Bio-MMBio-PWS) Genomics. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & PWS 340

DESCRIPTION: Current analysis of genes and genomes; computational and statistical approaches for analyzing genomic data, including genome sequencing and annotation, gene expression and the transcriptome, proteomics and functional genomics, and genetic variation and SNPs.

Course Outcomes
- Students will complete a series of exercises with data representing genomic experiments (analysis and interpret).
- Students will describe how genomes are sequenced.
- Students will understand techniques and concepts to assess genomic features such as methylation, gene expression, etc.

BIO 555 : Evolutionary and Ecological Modeling. (2:2:0)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: Senior status in bioinformatics program or graduate status; Stat 511, 512, or equivalent; instructor's consent.

DESCRIPTION: Using models in ecology. Practical experience in analytical, simulation, and agent-based models.

Course Outcomes
There are no course outcomes available

BIO 560 : Population Genetics. (4:4:0)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: Bio 420 or equivalent.

DESCRIPTION: Basic principles of population genetics applied to natural populations; drift, selection, and nonrandom mating; inferring population subdivision, migration, and gene flow.

Course Outcomes
- Students will gain a general introduction to the field a population genetics.
- Students will experience the broad application of population genetics to diverse fields from ecology to medicine.
- Students will manipulate and analyze population genetic data, especially molecular data.

C S 312 : Algorithm Analysis. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: C S 240 & C S 252

DESCRIPTION: Analysis of algorithms including searching, sorting, graphs, and trees.

Course Outcomes
- Understand fundamental computer algorithms and how to analyze them. In particular, students should understand the five algorithmic paradigms: divide-and-conquer, greedy, dynamic programming, backtracking, and branch-and-bound.
- Understand time and space analysis and complexity theory.
- Practice implementing specific algortihmic solutions to problems in C sharp using the Visual Studio Environment.
- See how math supports CS and how CS concepts can be formalized in mathematics (beyond lectures and the text book, homework exercises plus thought questions related to programming projects should pull these ideas together);
- Ability to write five programs that illustrate the conflicts of time efficiency, recursive complexity, and space allocation associated with the five algorithmic paradigms.

C S 340 : Software Design and Testing. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: C S 240

DESCRIPTION: Principles of software design, design patterns, design representation, refactoring. Principles of software quality assurance and testing. Development and testing tools.

Course Outcomes
- Articulate the principles of effective software design.
- Know when and how to apply various design patterns.
- Demonstrate how to effectively document and communicate software designs.
- Understand what quality assurance is, know how to build quality into software using review techniques, and demonstrate quality evaluation through testing.
- Use a variety of software development tools, including IDEs, automation tools, static analysis tools, source code control systems, unit testing tools, and documentation tools.
- Work effectively in a group to produce quality software using 1-5 above.

C S 450 : Introduction to Digital Signal and Image Processing. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 312 & MATH 313

RECOMMENDED: Stat 121.

DESCRIPTION: One- and two-dimensional signal-processing fundamentals, including sampling, noise, transforms, filtering, enhancement, and compression. Hands-on experimentation with speech, music, still images, and full-motion video.

Course Outcomes
- Understand and apply the following:Sampling and quantization of image informationCamera properties adn the acquisition of imagesMathematics of image-space transformationsFourier transforms adn filtering

C S 452 : Database Modeling Concepts. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: C S 240

DESCRIPTION: Database models: relational, deductive, object-oriented. Integrity constraints, query languages, database design.

Course Outcomes
- Be able to use a variety of commercial query languages (SQL, XQuery, SPARQL), both stand-alone and embeded in high-level programming languages. Know how relational algebra and relational calculus provide a basis for commercial query languages.
- Understand performance issues and optimization strategies. This includes query rewriting, secondary storage characteristics, and access strategies.
- Be able to design and develop relational database applications. This includes conceptual modeling and normalization theory.

- Be familiar with some of the current challenges facing database professionals.

C S 470 : Introduction to Artificial Intelligence. (3:3:0)

WHEN TAUGHT: Fall; Spring

PREREQUISITE: C S 312 & MATH 313 & STAT 121; or instructor's consent.

DESCRIPTION: Introduction to core areas of artifical intelligence; intelligent agents, problem solving and search, knowledge-based systems and inference, planning, uncertainty, learning, and perception.

Course Outcomes

- from business, medicine, robotics, gaming, and machine learning
- Does it require basic control?Does it involve uncertain reasoning?Does it have a simple goal, sophisticated utility, or multiple attributes?Does it require sequential choice or planning?How may decision makers are involved?
- What is the internal representation?What performance criteria are relevant?What is the nature of the environment?What are the actuators?What are the sensors?What are the agent's utilities?How is uncertainty represented?
- Uninformed, informed, constraint-satisfaction, hill-climbing, and stochastic (e.g., genetic algorithms) searchMarkov provesses, Bayes rule, Bayes nets, Hidden Markov Models, Grid Filters, and Kalman FiltersExpected utility theoryMulti-attribute utility theorySequential choice under uncertainty: value and policy iterationMinimax solutions from game theory: alpha-beta pruning
- Determine whether your solution is correctExpress the quality of your solutionValue the need to communicate your solution to others

C S 478 : Tools for Machine Learning and Data Mining. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: C S 312 & MATH 313 & STAT 121

DESCRIPTION: Machine learning and data mining models and other mechanisms allowing computers to learn and find knowledge from data.

Course Outcomes

- Take your computer to school
- You will be able to recognize when machine learning and data mining tools are applicable.
- You will be able to plan and execute successful machine learning and data mining projects, including selecting an adequate process for your specific task and avoiding the main data mining pitfalls.

C S 484 : Parallel Processing. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: C S 360

DESCRIPTION: Theoretical and practical study of parallel processing including multi-core, fine-grained, and clustered architectures, parallel programming languages, and parallel algorithms.

Course Outcomes

- Use multiple processors to solve a problem faster
- Understand the metrics that are used to evaluate effective applications.

CHEM 351 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 105; or CHEM 111

DESCRIPTION: Chemical bonds and molecular structure, conformation and configuration, functional classes, reactions and mechanisms, syntheses.

NOTE: Primarily for majors in chemical engineering and the biological sciences.

Course Outcomes

- Recognize functional group classes commonly encountered in organic chemistry and name representative molecules from each class using IUPAC rules for organic nomenclature.
- Predict structure and reactivity of alkanes, alkenes, alkynes, aromatic hydrocarbons, alcohols, ethers, epoxides, and alkylhalides based on such factors as carbon atom hybridization, bond length, bond strength, and bond polarity.
- Recognize and provide curved arrow mechanisms for the following types of organic reactions: additions, substitutions, and eliminations.
- Predict the energetically preferred conformation for straight-chain and branched alkanes, and for substituted cycloalkanes.
- Determine R and S configurations for chiral molecules and distinguish between enantiomers, diastereomers, meso compounds, and conformational isomers.
- Interpret 1H NMR, 13C NMR, IR, UV, and mass spectra and use these data to determine the structure of organic molecules.
- Predict the relative energies of reactive intermediates such as radicals, carbocations, and carbanions, based on structural considerations such as orbital hybridization, hyperconjugation, and resonance stabilization.

CHEM 352 : Organic Chemistry. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: CHEM 351; or CHEM 351M

DESCRIPTION: Continuation of Chem 351.

Course Outcomes

- Predict structure and reactivity of aldehydes, ketones, carboxylic acids, esters, anhydrides, amides, b-ketocarbonyl containing compounds, amines, and phenols.

- Recognize and provide curved arrow mechanisms for the following types of organic reactions: electrophilic & nucleophilic aromatic substitution, nucleophilic carbonyl addition, nucleophilic acyl substitution, carbonyl condensation, [4 2] cycloaddition, and substitution ato a carbonyl.
- Recognize and predict the reactivity of the following reactive species and/or reactive intermediates: Grignard reagents, Wittig reagents, organolithiums, diorganocuprates, enols, enolates, aryl diazonium ions, and benzynes.
- Recognize and predict the structure and reactivity of the following classes of biologically important organic molecules: carbohydrates, amino acids, proteins, and lipids.

CHEM 353 : Organic Chemistry Laboratory--Nonmajors. (1-2:0:6)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Chem 352 or concurrent enrollment (preferred).

DESCRIPTION: Physical and chemical properties, isolation and purification, characterization, syntheses.

NOTE: For predentistry, premedicine, and other majors who do not intend to take Chem 455.

Course Outcomes

- Perform a broad range of traditional organic reactions at the micro scale including: nucleophilic carbonyl additions, hydroboration, nucleophilic acyl substitution, electrophilic aromatic substitution, [4 2] cycloaddition, and photochemical alkene isomerization.
- Implement fundamental organic chemistry techniques for carrying out basic experiments, and purifying products, at the micro scale including: extraction, distillation, recrystalization, column chromatography, and TLC.
- Make correct conclusions about the outcome of experiments after collecting basic physical data, and after providing unambiguous interpretation of the necessary spectra.

CHEM 481 : Biochemistry. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: CHEM 352M & PDBIO 120; or CHEM 352 & PDBIO 120

DESCRIPTION: First-semester biochemistry. Molecular components of cells, chemical structure and function, enzymes, metabolic transformations, photosynthesis.

NOTE: For chemistry majors and students in biological sciences who contemplate pursuing advanced degrees, including medicine. (For prerequisite, Bio 130 may be used in place of PDBio 120.)

Course Outcomes

- Demonstrate mastery of key concepts in the Biochemistry subdiscipline and articulate the relationships between chemistry and biology. This outcome is elaborated in outcomes 2-5 below
- Explain how the structure of biomolecules such as proteins, nucleic acids, lipids, and carbohydrates determines their biological function
- Describe how enzymes catalyze reactions in terms of thermodynamics, kinetics, and mechanistic strategies
- Understand how energy is generated from metabolic reaction pathways
- Push arrows to predict and understand reactivity in metabolic pathways
- Communicate scientific ideas clearly to other specialists in writing
- Identify and understand primary research articles relevant to a specific biochemical question of current interest
- Interpret and critique experimental data relating to biochemical models

CHEM 482 : Mechanisms of Molecular Biology. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: CHEM 481M; or CHEM 481

DESCRIPTION: Second-semester biochemistry. Nucleic acid biochemistry and molecular biology: nucleotide metabolism, chromosome and chromatin structure, DNA structure and replication, RNA transcription and gene expression, protein synthesis and regulation, eukaryotic gene systems, signal transduction.

Course Outcomes

- Draw the structure of DNA, determine the topology of a plasmid, explain the chemical sequence of events that occur during DNA replication and draw structural changes that occur due to mutation.
- Determine how to perform and interpret an electrophoresis separation of DNA fragments, southern blot, restriction map, polymerase chain reaction, and a DNA sequencing reaction with necessary controls.
- Design a DNA cloning strategy, explain controls necessary, and write procedural plan.
- Draw and explain the mechanism of RNA transcription and how RNA is processed, spliced, and regulated. Understand the basic mechanisms of transcriptional regulation using the example of transcription of genes necessary for cholesterol synthesis.
- Determine when and how to use techniques that involve RNA: Northern blots, quantitative PCR, microarrays, S1 nuclease and primer extension mapping of the transcriptional start with appropriate controls.
- Determine the sequence of amino acids in a protein from a series of nucleotides.
- Draw and explain the process of protein translation and how it is regulated.
- Determine where a protein is localized in a tissue or cell: interpret a western blot, protein fusion assays.
- Determine with what a protein interacts: Interpret gel shift assays, Chromatin Immunoprecipitation, DNA footprinting, and yeast two hybrid reporter assays.
- Maintain faith through challenges and ethical boundaries in reporting and interpreting data.

CHEM 489 : Structural Biochemistry. (3:3:0)

WHEN TAUGHT: Fall

PREREQUISITE: CHEM 468

DESCRIPTION: Molecular structures of proteins, RNA and DNA as determinants of biological function. Topics include thermodynamics of folding and binding, structural determination, spectroscopy, modeling, protein recognition.

Course Outcomes

- Identify motifs and symmetries in macromolecular structures and chemical interactions that maintain structural integrity
- Relate the structure of a macromolecule to its biological function
- Describe how X-ray crystallography, nuclear magnetic resonance, cryogenic electron microscopy, and circular dichroism techniques give structural information for biological macromolecules
- Communicate scientific ideas (e.g. structure-function relationships) clearly and concisely to others orally and in writing, and use ethical standards in oral and written presentations
- Work with peers to answer scientific questions

CHEM 584 : Biochemistry Laboratory/Proteins. (3:1:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: CHEM 481M; or CHEM 481

DESCRIPTION: Introduction to current biochemical research procedures including spectrophotometry, chromatography, electrophoresis, and immunological techniques. Protein over-expression; isolation and characterization methods. Enzyme kinetics and protein-ligand interactions. Introduction to bioinformatics.

NOTE: May be taken before or after Chem 586.

Course Outcomes

- Apply spectroscopic techniques to analyze proteins, both their enzymatic and binding reactions
- Use gel electrophoresis and immunoblotting techniques to determine the presence and purity of proteins in biological samples
- Identify protein binding partners using co-immunoprecipitation methods
- Purify proteins using state-of-the-art separations methods
- Characterize an enzyme using steady state kinetics methods
- Use enzymes as analytical and diagnostic tools
- Properly record and interpret data
- Present data they have collected in an oral presentation and in a written scientific paper
- Understand ethical means of reporting results and giving proper credit to the work of others
- Measure ligand binding to proteins; determine dissociation constants and the degree of cooperativity.

CHEM 586 : Biochemistry Laboratory/Nucleic Acids. (3:1:6)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: CHEM 482

DESCRIPTION: Laboratory course covering major techniques involved in isolation, amplification, and cloning of recombinant DNA as well as isolation, synthesis, translation, and identification of RNA.

NOTE: May be taken before or after Chem 584.

Course Outcomes

- Understand, design and execute experiments using basic DNA manipulation procedures that include isolation, purification and modification of DNA
- Explain and perform PCR amplification and use this technique to detect the presence of DNA “targets”, DNA cloning (subcloning) and DNA sequencing
- Understand and explain how to isolate, quantitate and manipulate RNA
- Design and perform experiments to reverse transcribe RNA into complementary DNA (cDNA) and assess gene expression by semi- and quantitative PCR
- Isolate total RNA and be able to purify mRNA from this material
- Introduce and express foreign DNA and/or RNA in mammalian cells using the techniques of electroporation, lipid-based transfection, calcium phosphate based transfection and retroviral transduction
- “Knockdown” an expressed gene in mammalian cells using RNA silencing
- Prepare laboratory notebooks that include the objective, results and methods of each laboratory experiment. Additionally, students will provide conclusions to each experiment, including when appropriate, potential explanations to unexpected results

MATH 313 : Elementary Linear Algebra. (3:3:0)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 112.

RECOMMENDED: Math 290.

DESCRIPTION: Linear systems, matrices, vectors and vector spaces, linear transformations, determinants, inner product spaces, eigenvalues, and eigenvectors.

Course Outcomes

- This course is aimed at majors in mathematics, the physical sciences, engineering, and other students interested in applications of mathematics to their disciplines. Linear algebra is used more than any other form of advanced mathematics in industry and science. A key idea is the mathematical modeling of a problem via systems of linear equations. For more detailed information visit the Math 313 Wiki page.

MATH 334 : Ordinary Differential Equations. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 113 and Math 313.

DESCRIPTION: Methods and theory of ordinary differential equations.

Course Outcomes

There are no course outcomes available

MATH 410 : Introduction to Numerical Methods. (3:3:0)

WHEN Fall

TAUGHT:
PREREQUISITE: MATH 314; C S 142 or equivalent.
DESCRIPTION: Root finding, interpolation, curve fitting, numerical differentiation and integration, multiple integrals, direct solvers for linear systems, least squares, rational approximations, Fourier and other orthogonal methods.

Course Outcomes
- Root finding, interpolation, curve fitting, numerical differentiation and integration, multiple integrals, direct solvers for linear systems, least squares, rational approximations, Fourier and other orthogonal methods. [This official course description appears to differ with current standard practice, in that iterative solvers of linear systems are taught in this course, while "Fourier and other orthogonal methods" are postponed until Math 411.] For more detailed information visit the Math 410 Wiki page.
- Students will master numerical solution of equations of one variable, interpolation, numerical differentiation, numerical integration, and numerical solution of linear systems.

MATH 411 : Numerical Methods. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: MATH 334
DESCRIPTION: Iterative solvers for linear systems, eigenvalue, eigenvector approximations, numerical solutions to nonlinear systems, numerical techniques for initial and boundary value problems, elementary solvers for PDEs.

Course Outcomes
- Students should be able to describe, derive, and implement the numerical methods listed on the Math 411 Wiki page. They should be able to explain the advantages and disadvantages of each method. They should understand error analysis and be able to make practical decisions based on the outcomes of that analysis.

MATH 431 : (Math - EC En 370) Probability Theory. (3:3:0)
WHEN TAUGHT: Contact Department.
PREREQUISITE: MATH 313
DESCRIPTION: Axiomatic probability theory, conditional probability, discrete / continuous random variables, expectation, conditional expectation, moments, functions of random variables, multivariate distributions, laws of large numbers, central limit theorem.

Course Outcomes
There are no course outcomes available

MATH 450 : Combinatorics. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: MATH 371
DESCRIPTION: Permutations, combinations, recurrence relations, applications.

Course Outcomes
- Permutations and combinations basics, including the Pigeonhole Principle, binomial coefficients and the Binomial Theorem, Stirling's Approximation, Inclusion/exclusion, Generating functions and recurrence relations (rational functions), Groups, permutations and counting problems -- Polya's Theorem. For more detailed information visit the Math 450 Wiki page.

MMBIO 360 : Microbial Genetics. (4:3:3)
WHEN TAUGHT: Fall
PREREQUISITE: MMBIO 240
DESCRIPTION: How DNA governs complex bacterial functions. Classical and modern approaches to gene discovery, including genetic screens, gene mapping, targeted genetic manipulations, and analyzing gene activity.

Course Outcomes
There are no course outcomes available

MMBIO 465 : Virology. (3:3:0)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: MMBio 261 or equivalent.
DESCRIPTION: Basic principles of virology, emphasizing selected molecular aspects of virus life cycles and disease processes.

Course Outcomes
- Be able to answer basic questions about Virology: Why are viruses organized as they are? How do viruses replicate? How do viruses cause disease? What are the interactions between viruses and the host immune system? How to prevent/treat/cure viral infections? How can viruses be used as tools to study biological processes and for gene transfer? How can an understanding of viruses help you in your future career? *Relates to Program Learning Outcome: “Exhibit mastery of four of the principal areas of the discipline”, one of which is Virology.
- Understand experimental tools used to study viruses (these are broadly applicable to molecular biology, cell biology, and microbiology) and be able to develop experiments and interpret data.*Relates to Program Learning Outcomes: “Devise experiments with appropriate hypotheses and controls” and “Interpret experiments from primary scientific literature”
- Write about a current, pressing issue in the field of Virology.*Relates to Program Learning Outcome:

"Communicate scientific information"
- Understand how research of viruses "by study and also by faith" can lead to alleviation of human disease and suffering.*Relates to Program Learning Outcome: "Reflect/discuss/explore how faith in the Lord and Christ-like living are affected by an understanding of fundamental biological processes"

PDBIO 360 : Cell Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481

DESCRIPTION: Fundamentals of cell structure and function with reference to analytical methods used by cell biologists. Practice in designing, executing, and interpreting relative experiments.

Course Outcomes
- Students will demonstrate knowledge of the molecular architecture of the nucleus, including the nuclear envelope, nucleoplasm and nucleolus, chromatin, and the nuclear pore.
- Students will demonstrate an understanding of protein transport, including nuclear import and export and vesicular transport through the secretory and sorting pathways.
- Students will demonstrate knowledge of the molecular and cellular structure and dynamics of cytoskeletal systems.
- Students will be able to apply the basic cell biological principles in outcomes 1-3 to more complicated cellular processes, including cell adhesion, cell migration, cell polarity, cell division, cancer, and development.
- Students will demonstrate the ability to generate hypothesis about how cell biological systems work at the molecular level and design experiments that test that hypothesis.
- Students will demonstrate competence in interpreting original raw data from cell biology experiments, including microscopy, protein biochemistry, molecular biology, and genetics strategies
- Students will demonstrate the ability to critically evaluate primary cell biology literature, including the ability to evaluate the design and interpretation of experimental data.

PDBIO 362 : Advanced Physiology. (3:3:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PHSCS 106; or MMBIO 240 & PHSCS 220

DESCRIPTION: Integrated approach to organ system and cellular physiology. Problem solving/calculations.

NOTE: Requires background in chemistry and molecular biology. Students without this background should take PDBio 305.

Course Outcomes
- Students will manifest an understanding of how structures at the molecular level lead to properties associated with cells, tissues, organs, and organ systems.
- Students will demonstrate a comprehension of the functions of the major physiological systems found in humans.
- Students will describe how organ systems work together interactively to maintain homeostasis.

PDBIO 482 : Developmental Biology. (3:3:1)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: MMBIO 240 & PDBIO 360

RECOMMENDED: PDBio 325.

DESCRIPTION: Invertebrate and vertebrate developmental biology. Embryonic gastrulation, neurulation, pattering, etc. Modern approaches and research strategies. Emphasizes gene function, cell signaling, signal transduction during embryogenesis.

Course Outcomes
- Students will be able to generally describe the early development (from fertilization to axis formation) of one invertebrate and one vertebrate model organism.
- Students will be able to generally describe the concepts of cellular competence, induction, specification, commitment and differentiation in embryonic development.
- Students will be able to give two examples of organogenesis, including genes and signal transduction pathways that lead to organ system formation.
- Students will be able to explain embryonic patterning, using examples that include genes known to act in patterning events.
- Students will be able to explain at least two concepts in developmental biology that overlap with other sciences, such as stem cell research, cancer research, evolutionary sciences, or neuroscience.
- Students will be able to discern and summarize the current state of knowledge on a given topic, construct pioneering research questions on that topic, and propose experiments aimed at answering those questions.

PDBIO 582 : Developmental Genetics. (3:3:0)

WHEN TAUGHT: Winter

PREREQUISITE: PDBio 482 or equivalent.

DESCRIPTION: Gene function and regulation during cell specification and differentiation, pattern formation, and organogenesis in developing embryo.

Course Outcomes
- Students will demonstrate understanding of, and the ability to think critically about, primary developmental biology research articles.
- Students will demonstrate confidence in contributing to scientific discussions.
- Students will demonstrate the ability to think scientifically by formulating a research proposal.

STAT 424 : Statistical Computing 2. (3:3:2)

WHEN Winter

TAUGHT:
PREREQUISITE: STAT 224 & STAT 330
DESCRIPTION: S Plus, statistical graphics, simulation, advanced SAS (macros, Proc IML, and Proc SQL), and database programming.

Course Outcomes
- Demonstrate data manipulation and data cleaning skills using SQL and the Data Step in SASimporting data from external formats such as Excel into SASparsing data from SAS data sets into tables defined on a database
- Create and interact with relational databasescreating a database schema for storing data with well-defined relationships between properly normalized tablesgaining a high level of proficiency with SQLcreating basic summaries by querying a databaseaccessing data from a data base for statistical analysis in SAS
- Program SAS macros, including programming concepts such as variable declaration, passing parameters by value or reference, Boolean operators, flow control (iterative constructs and conditional statements), and basic understanding of efficient programming skills
- Work with large data sets to solve statistical problems using a combination of SAS and SQL skills

STAT 431 : Experimental Design. (3:3:0)
WHEN TAUGHT: Fall
PREREQUISITE: STAT 330
DESCRIPTION: Basic designs, power and sample size, Latin squares, incomplete blocks, change-over designs, factorials, fractional factorials, confounding, split-plots, response surface designs.

Course Outcomes
- Choose an experimental design plan that is appropriate for the research problem at hand
- Construct the design, including determining the proper number of replicates and the creation of a randomized data collection form
- Execute the plan to collect the data, or advise a colleague to do it
- Determine the model appropriate for the data
- Fit the model to the data, and verify that the assumptions have been satisfied
- Interpret the results and present the data in a meaningful way to answer the research problem at hand

STAT 435 : Nonparametric Statistical Methods. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: STAT 330; or STAT 511
DESCRIPTION: Permutation tests, rank-based methods, analysis of contingency tables, bootstrap methods, curve fitting.

Course Outcomes
- Explain and provide examples of the trade-off between parametric assumptions and efficiency of statistical inference
- Compute the following rank-based methods: Wilcoxon Rank-Sum test, Mann-Whitney test, Signed-Rank test, Kruskal-Wallis test, Spearman Rank Correlation
- Formulate and compute permutation tests for 2-sample, K-sample, and contingency tables
- Compute the following tests for contingency tables: Fisher's exact test, Mantel-Haenszel test, McNemar's test
- Formulate and compute bootstrap (resampling) confidence intervals
- Compute generalized additive models (GAM) with splines or smoothers for possible nonlinear effects in R

*Hours include courses that may fulfill university core requirements.

This major is designed to prepare students to teach in public schools. In order to graduate with this major, students are required to complete Utah State Office of Education licensing requirements. To view these requirements go to http://education.byu.edu/ess/licensing.html or contact Education Student Services, 120 MCKB, (801) 422-3426.

Program Objectives

The biological science education program involves formal training in the field of biology as well as preparation of students as professional educators. The discipline portion of the program is designed to give broad training in the life sciences. Students take classes in plant and animal diversity, molecular biology, genetics, ecology, evolution, and bioethics. This training provides students with significant background and expertise in the biological sciences. In addition to the discipline-level training, the program also requires courses in the physical sciences including chemistry, biochemistry, and physics. The physical science course work is comprehensive enough to place students two or three courses away from receiving additional teaching endorsements in physical science, earth systems, or integrated science. The educational component involves training in laboratory methods, laboratory safety, classroom management, pedagogy, and student teaching.

Program Requirements | View MAP | View Program Outcomes

1. Grades below C- in professional education courses or content courses will not be accepted in the teaching major or teaching minor. Teacher candidates must have a cumulative 2.85 GPA in teaching major and teaching minor courses to qualify for student teaching.

2. Complete the following biology core courses:

BIO 130 : Biology. (4:3:1)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: General biology course with laboratory for biology majors. Introduction to disciplines in the life sciences including methods for scientific inquiry, biochemical dynamics, cell structure and function, evolutionary theory, bioenergetics, and ecological interactions.

Course Outcomes

- Students will demonstrate basic literacy in the language of science and an understanding of the foundational theories of biology (i.e., be able to formulate appropriate hypotheses and predictions to test specific biological phenomena and use appropriate vocabulary to do so) o Atomic Molecular Theoryo Cell Theoryo Theories of Photosynthesis, Fermentation, and Cellular Respirationo Cell Division and Meiotic Theorieso Chromosomal and Mendelian Theories of Inheritanceo Watson and Crick's Theory of DNA Structure and Replicationo Protein Synthesis Theoryo Darwin's Theory of Natural Selectiono Hardy-Weinberg Theoryo Ecosystem Theoryo Population Growth Theoryo Competitive Exclusion and Behavioral Theory
- Students will demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strengths and weaknesses of this process.
- Students willappreciate the excitement of discovery that has accompanied important scientific developments.
- Students will demonstrate how scientific methodology can be used to analyze real-world science-related problems.
- Students will be able to evaluate scientific data and claims in order to make rational decisions on public-policy science issues that affect their community.
- Students will be able to express their thoughts (in oral, graphical, and written formats) on scientific topics clearly, including appropriate use of basic scientific vocabulary and effective interpretation of quantitative data.
- Students will be able to reflect rationally upon the interface between science and religion.
- Students will demonstrate sound scientific reasoning ability.

BIO 220A : Biological Diversity: Animals. (4:3:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Comparative organization and evolutionary significance of morphological, physiological, reproductive, and ecological differences in invertebrates and vertebrates. Laboratory included.

Course Outcomes

- Students will be able to discuss the broad patterns of the evolution of the clade Animalia, emphasizing the relationships among major sub-clades (phyla), the unique biological attributes that define these clades, and the novel changes in morphology over major transitions (unicellular to multicellular; acoelomate to pseudocoelomate to coelomate body plans, bilaterial vs radial symmetry, origins of exoskeletons, gill slits, notochord, crania & vertebral columns, etc.).

- Students will develop the skills necessary to understand the terminology of phylogenetic systematics and methods used to recover the “tree of life”, the logic behind the hierarchy (i.e., the only possible outcome of the process of “descent with modification”), and critically apply evolutionary reasoning, including the use of phylogeny and tree-thinking, to formulate and test hypotheses that explain biological diversity.
- Students will have the intellectual tools to continue to explore related topics with confidence and understanding throughout their lives, and a deeper appreciation for the diversity of life on earth.

BIO 220B : Biological Diversity: Plants. (4:3:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Comparative organization and evolutionary significance of morphological, physiological, reproductive, and ecological differences in fungi, algae, and principal groups of land plants. Laboratory included.

Course Outcomes

- Students will be able to discuss differences between cyanobacteria, algae, bryophytes, non-seed vascular plants, gymnosperms, flowering plants, and fungi with repsect to their lifecycles, characteristic morphologies, and biological roles.
- Students will develop the skills necessary to understand and critically apply evolutionary logic including the use of phylogeny and tree-thinking to formulate and test hypotheses that explain biological diversity
- Students will be able to continue to explore related topics with confidence and understanding throughout their lives.

BIO 350 : Ecology. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: PDBIO 120; or BIO 130

DESCRIPTION: Distribution and abundance of organisms and their interactions with the physical and biotic components of the earth.

Course Outcomes

- Understand the major physical processes that form and characterize the biosphere, including global scale energy flow, the carbon cycle, climate, and soil formation.
- Understand the processes that drive major levels of organization of the biotic world, including energetics in the ecosystem, population dynamics, and species interactions.
- Understand the importance of writing as a way of synthesizing and solidifying critical thought.
- Foster and promote environmental stewardship within your realm of influence and your community.
- Understand the importance of ecology to issues regarding human well-being
- See the connectivity and relevance of ecology to other fields of study

BIO 420 : Evolutionary Biology. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240 & PWS 340

RECOMMENDED: Concurrent enrollment in Bio 421.

DESCRIPTION: Intensive examination of evolution as the conceptual cornerstone of biology.

Course Outcomes

- Students will be able to describe the history and development of evolutionary thought.
- Students will be able to list and describe the evidence for evolution and its required corollaries.
- Students will be able to describe the mechanisms by which evolution occurs. Provide detailed explanations of the the processes of evolution by mutation, migration, genetic drift, non-random mating, and natural selection.
- Students will be able to explain adaptation, providing examples from several different fields of biology (e.g., cell biology, physiology, conservation biology, bioinformatics, medicine, behavior, etc.).
- Students will be able to describe the history of life on earth. Identify major evolutionary transitions over time, and explain the tools and evidence that support current hypotheses of the history of life.

BIO 421 : Evolutionary Biology Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: MMBIO 240

DESCRIPTION: Hands-on applications and analytical tools of evolutionary biology; emphasizing inference methodology and evidence complementing the theoretical constructs introduced in Bio 520, including comparative anatomy, phylogenetic inference, population genetics, species concepts, and human evolution.

NOTE: Concurrent enrollment with Bio 420 is strongly recommended.

Course Outcomes

- Students will gain a better understanding of the basic principles of evolution within a population including selection, drift, and founder effects by using computer simulations.
- Students will have a deeper understanding of the LDS position on evolution.
- Students will learn the details of phylogenetic reconstruction, tree searching, DNA sequence alignment, and other bioinformatics tools for deciphering patterns of evolution.
- Students will learn the details of species concepts and the criteria used for identifying and diagnosing species.
- Students will gain hands-on experience with hominid fossils and gain an understanding of the evidence that elucidates the biological history of humans.

MMBIO 240 : Molecular Biology. (3:3:0)

WHEN Fall; Winter; Spring

TAUGHT:
PREREQUISITE: PDBio 120 or MMBio 151 or Bio 130; Chem 105 or Chem 111.
DESCRIPTION: Fundamentals of protein and nucleic acid structure and their function in the context of the classical experiments that have informed our current models of biology at the molecular level.

Course Outcomes
- Describe and compare the functions and molecular structures of DNA, RNA, and protein, and explain the processes and regulatory mechanisms governing the synthesis of each.
- Explain a variety of molecular biology techniques, and interpret experimental results obtained using the various methods.
- Solve unfamiliar problems by applying the information and principles mastered through Learning Outcomes 1 and 2
- Collaborate with other students to solve challenging problems, to clarify ideas and concepts, and to learn from one another in a spirit of cooperation and integrity

PWS 340 : Genetics. (2:2:1)
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: MMBIO 240; or CHEM 481M; or CHEM 481
DESCRIPTION: Genetic mechanisms, their fundamental nature, interactions, and applications to human affairs. Genetics in quantitative terms. Extensive practice in problem solving.

Course Outcomes
- Students can construct two- and three-point linkage maps.
- Students can display fluency in interpreting gene annotation and nomenclature in GenBank records.
- Students can demonstrate ability to analyze and apply Chi-square goodness-of-fit tests to complex geneticdata sets involving segregation and Hardy-Weinberg equilibrium models.
- Students can identify differences between extranuclear, autosomal and sex-linked inheritance patterns.
- Students can use genetic data (DNA or amino acid sequence) to reconstruct basic evolutionary phylogenies.
- Students can dissect quantitative traits into environmental and genetic variance components.

Note: Bio 420, 421 must be taken at BYU.

3. Complete the following:

BIO 235 : Field Botany. (3:3:6)
WHEN TAUGHT: Fall; Spring
DESCRIPTION: Recognition, characteristics, and uses of common trees and shrubs.

Course Outcomes
- Students will demonstrate a fundamental knowledge of biology
- Students will develop the discovery skills and tools used by biologists
- Students will use biological knowledge to enhance their personal lives
- Students will use their skills and knowledge in biology to secure employment or to advance in higher education in biology-related disciplines

BIO 370 : Bioethics. (2:1:3)
WHEN TAUGHT: Fall; Winter
PREREQUISITE: Introductory biology course.
DESCRIPTION: In-depth lecture and small group discussion of varied bioethical issues. LDS Church positions emphasized when appropriate.

Course Outcomes
- Students will understand the ethical and philosophical underpinnings of bioethics and to develop ethical intuitions on bioethical issues.
- Students will learn the terminology, vocabulary, and objectives of bioethics.
- Students will understand the tools and approaches needed to make a bioethical decision and to communicate that decision in rationally informed ways.
- Students will understand the bioethical primary literature, to understand how to read case studies, and familiarity with the major issues being discussed in bioethics today.

BIO 380 : Comparative Animal Physiology and Anatomy. (4:3:3)
WHEN TAUGHT: Fall
PREREQUISITE: Bio 220A or instructor's consent.
DESCRIPTION: Structure and function of animal organ systems; structural and physiological responses to demands of and changes in environment; evolutionary constraints on anatomy and physiology.

Course Outcomes
- Students will demonstrate a fundamental knowledge of comparative vertebrate animal physiology and anatomy.
- Students will develop critical thinking skills while learning concepts and understanding the tools used by comparative vertebrate animal physiologists and anatomists to study function and structure.
- Students will use physiological and anatomical knowledge to enhance their personal lives.
- Students will use their skills and knowledge in comparative vertebrate animal physiology and anatomy to secure employment or to advance in higher education in biology-related disciplines.
- Students will develop an understanding of physiologic isotopic techniques utilized to indicate energy sources, trophic levels, body water, and latitudinal and altitudinal animal migration reflected by stable isotopes of carbon, nitrogen, hydrogen and oxygen.

BIO 441 : Entomology. (3:2:3)

WHEN TAUGHT: Fall

PREREQUISITE: Bio 220A or equivalent.

DESCRIPTION: External morphology, natural history, evolution, distribution, and phylogeny of insects. Insect collection required.

Course Outcomes

- Understand basic principles of morphology and systematics and apply these principles to your own knowledge of insects.
- Judge genetic relationships. Be able to recall current hypotheses of insect phylogeny at the ordinal level and have the tools needed to judge validity of new hypotheses of phylogeny that might be proposed. You will also study carefully the modifications associated with phylogenies that led to insect diversification and success.
- Understand details of insect morphology, and be well versed in both internal and external body structures.
- Recognize common insect families and be able to quickly identify them on sight.
- Gain or regain a sense of wonder for the natural world, especially as it relates to insects and other arthropods. Gain perspectives of the diversity and complexity in the insect world. Enhance your appreciation for the natural world we share with them.
- Learn life histories and specific collecting techniques for insects in their own habitats. You will learn how they fit in the natural world.
- Learn the protocols for detailed identificiations. Many insects will be totally new in appearance to you. You will use identification guides and illustrations to help you decide what the name of an insect is at the Order and Family levels.
- Use a variety of identification techniques to correctly identify insects and other arthropods. Throughout your life you will be asked by employers, friends, and family to answer the question, "What is this?" This course will give you these exact skills. A correct identification is a beginning step to learning more about a species and its relationships to the natural world and its pragmatic relationship to humans.

CHEM 105 : General College Chemistry. (4:5:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Math 110 (or equivalent) or concurrent enrollment.

DESCRIPTION: Atomic and molecular structure including bonding and periodic properties of the elements; reaction energetics, electrochemistry, acids and bases, inorganic and organic chemistry.

NOTE: Primarily for students in engineering and biological sciences. Three lectures and two recitation sections per week.

Course Outcomes

- Students will demonstrate a familiarity with the basic vocabulary and concepts of chemistry.
- Students will demonstrate a qualitative and basic quantitative understanding of the fundamental chemical laws which govern the material substances in our universe and which express how one variable in nature depends on another.
- Students will demonstrate the ability to manipulate quantitative descriptors of natural phenomena expressed both in the form of equations and of proportionalities, and solve chemistry problems using these skills.
- A successful Chemistry 105 students describes chemical phenomenon by first focusing on properties of the elements at the atomic level. Chemistry 105 students will gain a knowledge base of reactivity patterns of elements and compounds.
- Chemistry 105 students will be able to use their chemistry experience, knowledge, and skills to better understand and work in their own field of study.

CHEM 285 : Introductory Bio-organic Chemistry. (4:4:1)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Chem 101 or equivalent.

DESCRIPTION: Principles of organic chemistry and biochemistry relating to biomolecule structure and function.

Course Outcomes

- Students will understand the metabolism of carbohydrates, lipids, and proteins in humans. They will be able to describe in structures and words the metabolism of sugars through the pathways of glycolysis, the citric acid cycle, and the electron transport chain.
- Students will understand the structure and reactivity of organic functional groups, such as alcohols, aldehydes, carboxylic acids, and amides. For example, students will learn that aldehydes and ketones typically undergo addition reactions.
- Students will understand the structure and reactivity of the biomolecules that have those functional groups. For example, students will be able to demonstrate that carbohydrates are aldehydes and ketones that undergo addition reactions to form hemiacetals and polysaccharides with acetal linkages.

GEOL 101 : Introduction to Geology. (3:2:1)

OFFERED: Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

DESCRIPTION: Cultural focus on physical and environmental geology for nonscience majors; rocks and minerals. Field trips.

NOTE: This course is part of a GE Mosaic. See ge.byu.edu/mosaic-list for more information.

Course Outcomes

- 1. Understand the difference between minerals and rocks.2. Be able to identify common rocks and minerals.3. Know where and when the basic rock and mineral types form and how they are related to the hydrologic and tectonic systems.
- 1. Understand how the hydrologic system helps to shape the Earth and how the different sub-systems interact.2. Learn the reasons for climate change in both ancient and modern times.
- 1. Learn the basic evidences and ideas that support the Theory of Plate Tectonics.2. Understand how the plate tectonic system works, including the role of the different types of plate boundaries and the forces

that help to drive the system.3. Learn how the plate tectonic system has helped to shape the Earth's surface.
- 1. Gain a greater insight into the enormous length of geologic time and the evidences that support this claim.2. Learn the different ways that scientists can determine geologic ages.
- Learn how and why the other planets and moons in our solar system are different from Earth.

PHSCS 105 : General Physics 1. (3:3:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: High school algebra and trigonometry.

RECOMMENDED: Concurrent enrollment in Phscs 107.

DESCRIPTION: Applied physics course not requiring calculus. Mechanics, heat, wave motion, and sound.

Course Outcomes

There are no course outcomes available

STAT 121 : Principles of Statistics. (3:3:1)

OFFERED: Independent Study also; Honors also.

WHEN TAUGHT: Fall; Winter; Spring; Summer

RECOMMENDED: MATH 110 or equivalent.

DESCRIPTION: Stemplots, boxplots, histograms, scatterplots; central tendency, variability; confidence intervals and hypothesis testing involving one and two means and proportions; contingency tables, simple linear regression.

Course Outcomes

- Differentiate between observational studies and experiments
- Identify three sampling designs: simple random sample, stratified, and multi-stage
- Identify three designs of experiments: completely randomized, randomized block and matched-pairs
- Interpret and make appropriate conclusions from plots of data
- Calculate and interpret measures of center and spread
- Determine potential association between two quantitative and two categorical variables
- Communicate using technical language about probability and variation
- Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem
- Understand the importance of data collection and how it dictates the appropriate statistical method and acceptable inference
- Determine the appropriate statistical procedure to use for a given research problem or data set

: Honors Principles of Statistics.

Course Outcomes

4. Complete one course from the following:

BIO 470 : History and Philosophy of Biology. (3:1.5:1.5)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 350

DESCRIPTION: Development of fundamental generalizations of biology; nature of science; applications to major philosophical issues of current science.

Course Outcomes

- Students will demonstrate an understanding of the history of biology. This will include an understanding of the major figures and the historical development of modern biology. This will include having read original texts from the periods covered (Aristotle to Current Biology).
- Students will also have an understanding of principal philosophical issues confronting modern biology, including major research trends in philosophy of biology. The students will also have a grasp of what 'science' is, how it is practiced, and what expectations for knowledge can be justified using science.
- Students will have the ability to read and write about the primary literature both on the history, and the philosophy, of science. They will have a grasp of the terminology used in philosophy, and how philosophy of biology is currently practiced. Writing will be emphasized.

PHIL 423 : History and Philosophy of Science. (3:3:0)

PREREQUISITE: Phy S 100 or instructor's consent; Phil 300.

DESCRIPTION: Scientific explanation, concepts, and models. Philosophical assumptions and criteria for theory selection, as exemplified by historical development of basic ideas in science.

Course Outcomes

- Know major concepts, theories, figures, texts, and issues in the history and philosophy of Western science from antiquity to the contemporary era.
- Read and critically discuss figures and texts in the philosophy of science.
- Practice philosophical analysis and argumentation orally and in writing; write a complex, nuanced, and well-referenced research paper on the philosophy of science.
- Be able to explain the practice and value of philosophy of science.

5. Complete the Professional Education Component:
   - Complete the following:

BIO 276 : Exploration of Teaching in Biological Sciences. (3:ARR:ARR)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 220A & BIO 220B & CHEM 105; major GPA of 2.85 or higher, FBI fingerprint and background clearance; previous application required.

DESCRIPTION: Field-based initial teaching experience directed at helping prospective teachers experience

demands and opportunities associated with teaching secondary students.

Course Outcomes
There are no course outcomes available

BIO 377 : Teaching Methods and Instruction in Biology. (3:ARR:ARR)

WHEN TAUGHT: Fall

PREREQUISITE: BIO 276; concurrent enrollment in Bio 378, 379, Sc Ed 380; major GPA of 2.85 or higher.

DESCRIPTION: Developing meaningful and engaging instruction for secondary students in biological sciences; developing critical thinking, problem solving, literacy, and democratic character; assessing learner performance.

Course Outcomes
- Students will demonstrate an understanding of key learning theories by explaining how students learn.
- Students will demonstrate proper pedagogical practices in a biological teaching setting.
- Students will develop effective unit and lesson plans to promote science learning.

BIO 378 : Practicum in Biology Teaching. (1:0:3)

WHEN TAUGHT: Fall

PREREQUISITE: Concurrent enrollment in Bio 377, 379, Sc Ed 380.

DESCRIPTION: Implementing meaningful and engaging instruction for secondary students in biology; developing critical thinking, problem solving, literacy, and democratic character; assessing learner performance.

Course Outcomes
- Students will be able to identify best practices in teaching.
- Students will show active involvement with mentor teacher in creating and teaching lessons, grading papers, or any other classroom work.
- Students will be able to identify practices that they can incorporate into their own teaching.

BIO 379 : Classroom Management and Laboratory Safety. (1:1:0)

WHEN TAUGHT: Fall

PREREQUISITE: Concurrent enrollment in Bio 377, 378, Sc Ed 380.

DESCRIPTION: Current theory, research, and application in classroom management; creating positive teacher-student and peer relationships; developing optimal learning environments.

Course Outcomes
- Students will integrate current theory, research, and application in classroom management to create an optimal learning environment.
- Students will demonstrate appropriate and effective classroom management strategies.
- Students will demonstrate an understanding of proper laboratory safety protocols.

CPSE 402 : Educating Students with Disabilities in Secondary Classrooms. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring

PREREQUISITE: Sc Ed 350 or concurrent enrollment; Sc Ed 276R or comparable major course; FBI fingerprint background clearance.

DESCRIPTION: Issues, policies, and methods in teaching secondary students with disabilities in general education classrooms. Lab.

Course Outcomes
- Demonstrate sensitivity to individuals with disabilities.
- Describe the effects of cultural, ethnic, and language diversity on the education of individuals with disabilities
- Describe the steps in the Individual Education Program (IEP) process, including Individualized Transition Plans for students aged 14-22.
- Use research-supported methods for academic instruction of individuals with disabilities including explicit instruction, learning strategies, task analysis, and active participation.
- Describe models and strategies of consultation and collaboration including co-planning and co-teaching.
- Define special education and describe the legal structure of services for individuals with disabilities, including the Individuals with Disabilities Education Act (IDEA).
- Develop a personal philosophy of special education which includes an understanding of the implications of Least Restrictive Environment as defined in IDEA.
- Demonstrate knowledge of basic classroom management theories and an understanding of teacher attitudes and behaviors that influence behavior of individuals with exceptional learning needs.
- Describe the characteristics and educational implications of students with high and low incidence disabilities
- Demonstrate ability to identify and prioritize areas of the general curriculum and provide accommodations for individuals with exceptional learning needs

IP&T 286 : Instructional Technology in Teaching. (1:1:ARR)

WHEN TAUGHT: Fall; Winter; Spring

DESCRIPTION: Using instructional design, visual design, and differentiated staffing principles along with multimedia authoring systems, telecommunication, and other computer-based tools in the development of educational applications for secondary education settings.

Course Outcomes
There are no course outcomes available

SC ED 350 : Adolescent Development in an Education Context. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Sc Ed 276R or Phy S 276 or Engl 276R or Bio 276 or SFL 276R or Hlth 276R or MthEd 276 or PETE 276R or TEE 276A or TEE 276B.

DESCRIPTION: Adolescent development and its implications for integrated school culture, curriculum design, instructional practices, and assessment.

Course Outcomes
- The students will demonstrate how the stages of development impact instructional practices.
- The students will understand the social, physical, and cognitive developmental stages of adolescence in relation to the tasks of automony, identity and intimacy.
- The students will demonstrate how the stages of development impact classroom environments and management.

SC ED 353 : Multicultural Education. (2:2:0)

WHEN TAUGHT: Fall; Winter; Spring; Summer

PREREQUISITE: Sc Ed 350 or concurrent enrollment; Sc Ed 276R or Phy S 276 or Engl 276R or Bio 276 or SFL 276R or Hlth 276R or MthEd 276 or PETE 276R or TEE 276A or TEE 276B.

DESCRIPTION: Designing and adapting instruction for diverse learners; collaborating with families, cultures, and communities in promoting and sustaining learning.

Course Outcomes
- Students will examine and understand the various dimensions of cultural identity, including one's own, and apply this knowledge to their thinking and behavio through a process of reflection.
- Acknowledge the dynamics of culture and diversity in school success and teachers' teaching. This includes recognizing and overcoming deficit thinking.
- Identify culturally and linguistically relevant pedagogy and use theoretically grounded principles to analyze why it is effective for many different types of learners.
- Interpret the historical context of diversity, discrimination, and language policies and evaluate how they impact current school practices.
- Recognize and acknowledge racism, discrimination and other forms of inquity and privilege in themselves, in others, and within institutions.
- Recognize and use a personal moral spiritual framework along with principles and concepts of social science to guide educational accomplishments for diverse learners.

SC ED 380 : Content-Area Literacy. (2:2:0)

WHEN TAUGHT: Fall

PREREQUISITE: Concurrent enrollment in Sc Ed 377 or equivalent course.

DESCRIPTION: Current theory and related practices in literacy assessment and instruction for content-area classrooms.

Course Outcomes
- Teacher candidates will gain an understanding of theories related to literacy, reading, writing, texts, and literacy instruction.
- Teacher candidates will use instructional strategies and design curriculum materials to support students' creation, negotiation, and use of texts.
- Teacher candidates will develop an understanding of the place of literacy instruction in content-area classrooms to support students' access to knowledge and participation in a social and political democracy.

Note 1: FBI fingerprint and background clearance must be completed prior to enrollment in Bio 276.

Note 2: Bio 377, 378, and 379 should be taken concurrently in the semester prior to taking Sc Ed 476R.

- Complete 12 hours from the following:

SC ED 476R : Secondary Student-Teaching. (1-12:ARR:ARR)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: Completion of all course work or departmental approval; requires a major GPA of 2.85; at least a C- in Sc Ed 377; FBI fingerprint and background clearance.

DESCRIPTION: Capstone, field-based, semester-long experience in teaching secondary students; demonstrating proficiency in all program standards. Seminar required.

Course Outcomes
- Students will put into practice the theories they have learned in content and pedagogy courses including planning lessons, assessing students of all abilities and cultural backgrounds, using a variety of instructional strategies, and collaborating with other teachers and with the community.

BIO 430 : Plant Classification and Identification. (4:3:3)

WHEN TAUGHT: Fall

PREREQUISITE: Bio 100 or Bio 130 or PDBio 120 or PWS 100 or instructor's consent.

DESCRIPTION: Principles of plant systematics, taxonomy, and classification, emphasizing family recognition by sight, terminology, and use of identification keys to the temperate flora.

Course Outcomes

- Students will apply correct vocabulary for describing plant parts and be able to deduce the meaning of new terms based on knowledge of common roots, prefixes, and suffixes.
- Students will recognize the major groups of vascular plants, be able to differentiate them by their principal characters, and understand their phylogenetic relationships.
- Students will identify by sight 40 families of flower plants as well as common families of ferns and gymnosperms, by recognizing differentiating features of each family.
- Students will gain proficiency in the use of keys and identification manuals for identifying any unknown plant to species.

BIO 443 : Ichthyology. (3:2:3)

WHEN TAUGHT: Fall Odd Yrs.

PREREQUISITE: BIO 220A

DESCRIPTION: Fish systematics, evolution, morphology, distribution, and natural history.

Course Outcomes

- Students will have a general understanding of fish respiration.
- Students will have a general understanding of fish body structure.
- Students will have a general understanding of fish food processing.
- Students will have a general understanding of fish behavior and communication.

BIO 445 : Herpetology. (4:3:2)

WHEN TAUGHT: Winter Even Yrs.

PREREQUISITE: BIO 220A

DESCRIPTION: Reptile and amphibian evolution, systematics, morphology, distribution, and natural history. Lab emphasizes taxonomy, classification, and distribution of western U.S. species.

Course Outcomes

- Each student will gain a deeper understanding of some details of the origin of tetrapods, and the origin of the amniotes.
- Each student will gain a deeper understanding of the phylogenetic position of extinct and extant clades of amphibians & reptiles within the clade Vertebrate.
- Each student will acquire a detailed knowledge of the evolution and natural history (natural history, behavior, etc.) of the major clades of extant amphibians and reptiles .
- Through lab and field experiences, each student will acquire a detailed knowledge of diagnostic characters, taxonomy & distributions, and some aspects of ecology of native western species.
- Each student will acquire some knowledge of the conservation status of selected species in the US and abroad.

BIO 446 : (Bio - PWS) Ornithology. (3:2:3)

WHEN TAUGHT: Winter

PREREQUISITE: Bio 100 or Bio 130 or PDBio 120 or PWS 100 or equivalent or instructor's consent.

DESCRIPTION: Avian systematics, evolution, distribution, identification, and natural history.

NOTE: One three-day field trip required.

Course Outcomes

- Define ornithology and what it encompasses.
- Discuss the global diversity of birds in both form and function
- Articulate the current thinking regarding the evolution of birds.
- Identify 200 birds common to western North America.

BIO 447 : Mammalogy. (3:2:3)

WHEN TAUGHT: Fall
PREREQUISITE: BIO 220A; or PWS 344
DESCRIPTION: Mammalian diversity, evolution, distribution, and natural history. Two three-day field trips required.

Course Outcomes
- Be able to recognize the more common species of Utah mammals based on external and skull features
- Be able to recognize and identify most orders of mammals based on features of the skull
- Understand the evolutionary history of mammals and the modern diversity of mammalian orders
- Enhance skills directed toward understanding and interpreting original scientific literature dealing with mammalian biology

BIO 452 : Introduction to Marine Sciences. (4:3:1)
WHEN TAUGHT: Contact Department. ; Spring Even Yrs.
PREREQUISITE: Instructor's consent.
DESCRIPTION: Principles of physical oceanography, biodiversity, and ecology of numerous ocean habitats. Extensive field trips.

Course Outcomes
There are no course outcomes available

BIO 463 : Genetics of Human Disease. (3:3:0)
WHEN TAUGHT: Winter
PREREQUISITE: PWS 340
DESCRIPTION: Examining the application of genetics to understanding and treatment of human disease. Functional consequences of mutations; use of model organisms; linkage and association analysis of complex traits; pharmacogenetics; ethical considerations.

Course Outcomes
- Understand and explain the different types of genetic variants, how they can be typed and how they can be used to understand the genetic architecture of human disease.
- Understand linkage disequilibrium in the human genome and the role it plays in the search for genetic risk factors for human disease
- Understand and use basic statistics and software for analyzing the correlation between genetic markers and risk for disease.
- Understand and explain how model organisms contribute to our understanding of the genetics of human disease.
- Demonstrate the ability to obtain, aggregate and present information about the current knowledge of the genetics of a human disease.

GEOL 103 : Life of the Past. (3:2:1)
WHEN TAUGHT: Contact Department.
DESCRIPTION: Cultural focus on historical geology for nonscience majors; fossils. Field trips.

Course Outcomes
There are no course outcomes available

GEOL 112 : Historical Geology. (4:3:2)
WHEN TAUGHT: Winter
PREREQUISITE: GEOL 111
DESCRIPTION: Developmental history of the earth, its landforms, and life forms, emphasizing the North American continent. Field trips and lab studies.

Course Outcomes
- Demonstrate understanding of the fundamentals of uniformitarianism and the scientific methods for determining the relative and absolute ages of Earth materials and events.
- Demonstrate a basic understanding of the origin and historical significance of sedimentary rocks. Be able to identify common clastic and non-clastic sedimentary rock types in hand sample and on outcrop. Be able to determine the depositional environment from rock type and outcrop pattern. Understand the age and significance of Sloss' depositional sequences.
- Be able to recognize the nature and mode of fossil preservation. Be able to identify the major invertebrate fossil groups and signify the environmental significance of each. Use fossils to recognize the age of sedimentary strata.
- Demonstrate a basic knowledge of organic evolution including the key concepts of natural selection and its role in producing the fossil record. Be able to explain the evidence that led Darwin to the theory of natural selection as well as post-Darwinian discoveries.
- Understand that modern Earth is a product of the coevolution of the biosphere, lithosphere, atmosphere, and hydrosphere over 4.6 billion years of earth history. Demonstrate knowledge of key biological, depositional, tectonic, and climatic events in the context of the geological timescale.
- Be able to decipher the geological history of an area from a geological map.
- Demonstrate mastery of a scientific concept and ability to convey that concept to a body of peers using PowerPoint and/or other professional means.

MATH 119 : Introduction to Calculus. (4:4:1)
OFFERED: Independent Study only.
WHEN TAUGHT: Fall; Winter; Spring; Summer
PREREQUISITE: Math 110 and Math 111; or equivalent.
DESCRIPTION: Introduction to plane analytic geometry and calculus.

Course Outcomes
- This course is designed to provide beginning undergraduate students a first exposure to Calculus concepts,

theorems, and techniques. In general, theorems will not be proved. An understanding of the theorems and their applications to solve calculus problems will be taught. Students will be expected to develop effective problem solving skills based on their understanding of the theory and not just memorize a set of routines to solve problems. For a more detailed course description, visit the Math 119 Wiki page.

PWS 282 : Introduction to Soil Science. (3:3:0)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PWS 283 or concurrent enrollment.

DESCRIPTION: Physical, chemical and microbiological properties of soils that affect plant growth in natural, agricultural, and urban environments.

Course Outcomes

- Enhance critically thinking skills as they apply to soil resource management and conservation
- Demonstrate a fundamental knowledge of soil chemistry, genesis, microbiology, physics, taxonomy, and nutrient and water relations
- Create a conceptual framework to help manage soil resources (i.e., animal habitat, plant nutrient fertility, salinity, soil and water quality, and wind and water erosion) in agricultural, urban, and ecological settings
- Understand the historical and current problems, and cultural concerns facing soils as a natural resource essential to human life

PWS 283 : Introduction to Soil Science Laboratory. (1:0:3)

WHEN TAUGHT: Fall; Winter

PREREQUISITE: PWS 282 or concurrent enrollment.

DESCRIPTION: Laboratory techniques in determining soil physical, chemical, and fertility properties.

Course Outcomes

- Understand basic soil assessments related to soil chemistry, physics, biology, and nutrient fertility
- Apply laboratory techniques to determine problems associated with soil resource conservation and management
- Conduct basic soil methods in nutrient analysis; textural classification; and organic matter, cation exchange capacity, acidity, and alkalinity content

The Discipline

The biology degree provides students with current, practical knowledge of plants and animals, emphasizing whole organism biology in both ecological and evolutionary contexts. Broad, synthetic training, from molecular to community levels of organization, equips students to address critical issues and contemporary biological problems associated with the long-term preservation of earth's biodiversity. Elective flexibility allows students to emphasize the botanical or zoological fields, or create a combined program of study. Undergraduate research opportunities may include internships, museum collections curation, bioinventory and data-basing activities, applied molecular genetics, and field and laboratory research in ecology, conservation biology, or evolutionary biology.

1. Complete the following:

BIO 130 : Biology. (4:3:1)

WHEN TAUGHT: Fall; Winter

DESCRIPTION: General biology course with laboratory for biology majors. Introduction to disciplines in the life sciences including methods for scientific inquiry, biochemical dynamics, cell structure and function, evolutionary theory, bioenergetics, and ecological interactions.

Course Outcomes

- Students will demonstrate basic literacy in the language of science and an understanding of the foundational theories of biology (i.e., be able to formulate appropriate hypotheses and predictions to test specific biological phenomena and use appropriate vocabulary to do so) o Atomic Molecular Theoryo Cell Theoryo Theories of Photosynthesis, Fermentation, and Cellular Respirationo Cell Division and Meiotic Theorieso Chromosomal and Mendelian Theories of Inheritanceo Watson and Crick's Theory of DNA Structure and Replicationo Protein Synthesis Theoryo Darwin's Theory of Natural Selectiono Hardy-Weinberg Theoryo Ecosystem Theoryo Population Growth Theoryo Competitive Exclusion and Behavioral Theory
- Students will demonstrate an understanding of the basic scientific principles which undergird the scientific process, including the strengths and weaknesses of this process.
